## Research principal

[University of Gothenburg](#) - Institute of Medicine, School of Public Health and Community Medicine

## Description

The data consists of short examples of vibration signals in buildings. The examples were collected in a project focused on annoyance by vibration from construction work. The examples include tri-axial vibration signals from blasting (tunnels, general and rock extraction), soil compacting, piling, sheet wall piling and construction traffic. The data are shared for use by other researchers.

The zip file contains a table summarising the vibration measurements in Excel and Open Office formats, and a folder with 257 .csv files with raw data from each measurement. The measurements have a unique ID in the file name that is also presented in the Excel file.

## Data contains personal data

No

## Language

[English](#)

## Time period(s) investigated

2000 – 2020

## Variables

2

## Data format / data structure

[Numeric](#)

## Data collection 1

- Description of the mode of collection: Collected measurements of building vibration in Sweden during construction work
- Time period(s) for data collection: 2000 – 2019

## Geographic spread

Geographic location: [Sweden](#)

## Responsible department/unit

Institute of Medicine, School of Public Health and Community Medicine

## Funding

- Funding agency: Swedish Transport Administration
- Funding agency's reference number: TRV 2019/88651
- Project name on the application: Störning av vibrationer vid bygg- och anläggningsprojekt
