Description

A twin study on health and behavior in young adult twins born between 1985 and 1992 was conducted. The aim of the study was to examine how genetic and environmental factors influences diseases. The study included questions about gastrointestinal disorders, pulmonary disease, asthma/allergy, arthritis, affective disorders and symptoms, eating disorders , fibromyalgia, chronic fatigue syndrome and women's health. The sample consisted of both identical (monozygotic) and fraternal (dizygotic) twins, including same-sex and opposite-sex pairs. Conducted in 2013, the study had a total of 6,870 participants out of 16,244 invited.

Participants were also asked to provide DNA samples via saliva for zygosity determination and genotyping. A total of 4,000 twins who participated in the YATSS survey were genotyped.

The YATSS study includes the following question areas:

ADHD

Alcohol

Allergy

Autism

Burnout

CES-D - Center for Epidemiologic Studies Depression Scale -11 items, Iowa Form

Chronic fatigue syndrome

DCQ - Dysmorphic Concerns Questionnaire (BDD) - 7 items, swedish version

Demography

MDD - Major Depressive Disorder - 31 items

Eatingdisorders

Education and occupation

Epilepsy

EPQ - Eysenck Personality Questionnaire - 9 items

Fibromyalgia
GAD - Generalised Anxiety Disorder - 19 items
Headache
Hoarding - HRS-I (Hoarding Rating Scale-Interview) - 4 out of 5 items
IBS - Irritable Bowel Syndrome
Illicit drugs
Medical history
Menstruation och reproductive history
OA & RA - Osteoarthritis and Rheumatoid arthritis
OCD - Obsessive Compulsive Disorder - 12 items
Physical activity
Performance
Psychosis
Reflux
Sexual risk behavior
SIL - sick leave
Sleep
Smoking and snuff use
Trauma
Urinary tract infection
Socio-economic index - classification mainly based on information about individuals profession

Study design

Cohort study

Description of study design

Data collection was conducted via a web survey, but also via paper questionnaires if participants desired it. Participation in the study was based on informed consent.

Sampling procedure

The sample was based on all twins born in Sweden between May 1985 and June 1992 according to the Medical Birth Registry (the National Board of Health and Welfare). Twins who had declined further participation in the twin registry, had protected identity, had emigrated, or had died were excluded. Both complete twin pairs and individual twins were invited to participate in the study.

Biobank is connected to the study

The study has collected samples/material which are stored in a scientific collection or biobank
Scientific collection or biobank name: KI Biobank

Type(s) of sample: DNA from saliva

Variables

1130

Number of individuals/objects

6870

Response rate/participation rate

42%

Out of 16,244 invited participants, 6,870 responded, resulting in a response rate of 42%.

Data collection 1

- Mode of collection: Self-administered questionnaire
- Description of the mode of collection: Paper or web questionnaire
- Time period(s) for data collection: 2013-03 – 2014-01
- Data collector: Karolinska Institutet
- Instrument: CES-D (Structured questionnaire)

The CES-D scale is used to rate how often over the past week respondents experienced symptoms associated with depression, such as restless sleep, poor appetite, and feeling lonely.

DOI: 10.1177/089826439300500202

DOI: 10.1177/014662167700100306

- Instrument: DCQ (Structured questionnaire)

The DCQ is a self-report measure with seven items which ask about cognitive and behavioural

aspects of dysmorphic concern. See document YATSS_Instrument_DCQ_svensk.pdf

DOI: 10.3109/00048679809062719

DOI: 10.1046/j.1440-1614.2001.00860.x

DOI: 10.3109/00048671003596055

- Instrument: OCD (Structured questionnaire)

A scale that measures symptoms of obsessive-compulsive disorder.

DOI: 10.1037//1040-3590.14.4.485

- Instrument: HRS-I (Structured questionnaire)

A five-item semi-structured interview that assesses the features of compulsive hoarding (clutter, difficulty discarding, acquisition, distress and impairment).

DOI: 10.1016/j.psychres.2009.05.001

- Instrument: MDD (Structured questionnaire)

Major Depressive Disorder

Diagnostic and Statistical Manual of Mental Disorders, 4th Edition, Text Revision (DSM-IV-TR; APA, 2000).
