Description

The Cohort of Swedish Men is a large population-based cohort of over 45,000 men in the counties of Västmanland and Örebro. All men born 1918-1952 who were residing in Västmanland and Örebro County in 1997 received an invitation to participate in this research study and a questionnaire to answer and return. Approximately 48,000 men responded. Follow-ups were done during 2008/2009 and 2019. The study examine associations of environmental/modifiable risk factors with several cancer sites (e.g., prostate, colorectal and renal cell cancer), myocardial infarction, stroke, cataracts, as well as death causes. The study has a longitudinal design, and to complement the update on exposure data record linkages to the nationwide Cancer Register, the In-Patient Register, and the Cause of Death Register and Population Register are also done.

The questionnaires used in the Cohort of Swedish men are the same as the ones that have been used in the Swedish Mammography Cohort (SMC). For updated information on questionnaires and variable lists please visit <https://www.simpler4health.se/researchers/>.

Purpose:

The general aim of the Cohort of Swedish Men (COSM) is to assess relationships between a number of modifiable factors (diet, vitamin supplement use, physical activity, smoking, alcohol, body weight, other anthropometric measures etc.) and the occurrence of several major chronic diseases.

For more detailed information please visit the SIMPLER website, <https://www.simpler4health.se/researchers/cohorts/>.

For restrictions in data use see <https://www.simpler4health.se/researchers/rules-and-guidelines/> and <https://www.simpler4health.se/researchers/publication-policy/>.

The Lifestyle questionnaire used in 2009 was sent in September 2019 to all respondents answering the Health questionnaire 2019 sent in January and were alive. The questionnaire can be found at <https://www.simpler4health.se/researchers/questionnaires/>.

Description of study design

Longitudinal cohort study

Sampling procedure

[Total universe/Complete enumeration](#)

In 1997 all men who lived in Västmanland or Örebro County and were born 1918-1952 received an invitation by mail to participate in this research study together with a questionnaire to be answered and returned. Follow-ups have been performed approximately every tenth year starting in 2008. At the follow-up 2008/2009 the questionnaire was extended and separated into two questionnaires. An additional follow-up was done during 2019.

Time period(s) investigated

1997 - Ongoing

Biobank is connected to the study

The study has collected samples/material which are stored in a scientific collection or biobank
Scientific collection or biobank name: Uppsala biobank/SIMPLER

Type(s) of sample: DNA

Response rate/participation rate

86%

The questionnaire was sent to 18 746 participants, 16 166 participants answered the questionnaire.

Data format / data structure
