Description

Information about diabetes diagnosis, hypertension and atrial fibrillation, smoking and physical inactivity were collected via postal survey. This information were afterwards completed with information about first case of ischemic stroke from Riks-Stroke (national quality registry for acute stroke) or the Lund stroke registry, demographic registrydata (education, year of birth, sex, marital status and country of birth) and individual exposure for air pollution through geo-coding by home address connected to a coordinated set emission database.

Purpose:

To study short- and long term effects by air-pollutants on stroke and myocardial infarction in Scania

Survey responses are also available for 4700 controls living in Scania and matched on year of birth and sex.

Unit of analysis

[Individual](#)

Population

Skåningar födda 1923-1965, första insjuknande i ischemisk stroke 2001-2006, i livet 1 oktober 2008 och med giltiga bostadsadressuppgifter

Study design

Case-control study

Sampling procedure

[Non-probability: Purposive](#)

Time period(s) investigated

2008-11 - 2008-12

Variables

66

Number of individuals/objects

4621

Response rate/participation rate

70%

Data format / data structure

[Numeric](#)

Data collection 1

- Mode of collection: Self-administered questionnaire: paper
- Time period(s) for data collection: 2008-11 – 2008-12
- Source of the data: Population group

Geographic spread

Geographic description: Scania

Responsible department/unit
