

Biobank for individuals with prostate cancer - Biobank for prostate cancer-cases

SND-ID: ext0138-1.

Is part of collection at SND: [Scania Metadatabase for Epidemiology \(SME\)](#)

Creator/Principal investigator(s)

Håkan Olsson - Lund University, Faculty of Medicine, The Division of Oncology and Pathology

Research principal

[Lund University](#) - Faculty of Medicine, The Division of Oncology and Pathology

Description

The cohort consists of 900 individuals with prostate cancer who came to an oncology center in southern Sweden for therapy. The collection of this study started in 2007 and is ongoing. A control group of 1,000 men recruited among accompanying spouses of female cancer patients also belong to this study. The participants have donated blood and answered questions relating to previous medications, height, weight, alcohol consumption and smoking.

Purpose:

To study risk factors for prostate cancer

Unit of analysis

[Individual](#)

Population

individuals with prostate cancer who came to an oncology center in southern Sweden for therapy.

Study design

Case-control study

Sampling procedure

[Non-probability](#)

Time period(s) investigated

2007 - Ongoing

Number of individuals/objects

900

Data format / data structure

[Numeric](#)

Data collection 1

- Mode of collection: Measurements and tests
- Time period(s) for data collection: 2007-ongoing
- Source of the data: Population group, Biological samples

Data collection 2

- Mode of collection: Self-administered questionnaire
- Time period(s) for data collection: 2007-ongoing
- Source of the data: Population group, Biological samples

Responsible department/unit

Faculty of Medicine, The Division of Oncology and Pathology
