Description

The survey "Health on equal terms?" is a national survey, conducted every year since 2004. The Public Health Agency is responsible for the survey and Statistics Sweden (SCB) is responsible for the distribution, collection and registration. During the data collection in 2010, the City of Gothenburg ordered an additional sample for Gothenburg.

The additional sample in 2010 included all individuals aged 16-84 years living in Gothenburg. The questionnaire were answered by 3,014 individuals from the sample in Gothenburg, representing a response rate of 45 percent.

Including the national sample produced by Statistics Sweden (SCB), a total of 4,211 individuals participated from Västra Götaland County.

The questionnaire was printed in two versions. Addition to the national public health questionnaire, a similar questionnaire was conducted including the EQ-5D instrument. The questionnaire with the EQ-5D instrument was sent to the additional sample in Gothenburg. The questionnaire with the EQ-5D instrument consisted of 143 questions covering e.g. issues of health, lifestyle, economic conditions, work and employment, and security and social relations. In addition to data collected through the questionnaires, registry data were also included.

Purpose:

The aim of the national survey was to investigate the health in the population and to show changes in the population's health over time as a follow up of the national health politics. The aim of the additional sample in Gothenburg was to investigate the health in the population living in Gothenburg.

Data contains personal data

No

Unit of analysis

[Individual](#)

Population

All individuals aged 16-84 years and living in Gothenburg.

Time Method

[Longitudinal: Trend/Repeated cross-section](#)

Sampling procedure

[Probability: Stratified](#)

[Probability: Simple random](#)

Urvalsramen i denna undersökning har skapats utifrån Registret över totalbefolkningen (RTB) och består av samtliga folkbokförda i Göteborg i åldern 16-84 år. Antalet individer i ramen var 408 814 den 31/1 2010.

Det nationella urvalet drogs först genom ett obundet slumpmässigt urval. Därefter drogs ett stratifierat obundet slumpmässigt urval i Göteborg så att den bestämda urvalsstorleken per stratum uppnåddes. Ett stratifierat obundet slumpmässigt urval innebär att alla objekt inom respektive stratum har lika stor sannolikhet att komma med i urvalet. Mer information finns att läsa i Teknisk rapport.

Time period(s) investigated

2010-03-24 - 2010-06-17

Number of individuals/objects

3014

Response rate/participation rate

ca 45 %
