### **Description**

The Generations and Gender Programme (GGP) is a Social Science Research Infrastructure that provides micro- and macro-level data which significantly improve the knowledge base for social science. The Infrastructure is run by institutes with strong traditions in academic and policy-related research on population and family change and on survey methodology.

The survey was conducted in two waves. Up till now, 19 countries have conducted at least one wave of data collection, with an average of 9,000 respondents per country. The Generations and Gender Programme is unique in its large coverage of Central and East European countries. Respondents are interviewed every 3 years and changes in the family life are recorded. GGP covers the whole adult life-course, between the age of 18 and 79. The Programme's main goal is to provide data that can contribute to enhanced understanding of demographic and social developments and of the factors that influence these

developments, with particular attention given to relationships between children and parents (generations) and those between partners (gender). A broad array of topics including fertility, partnership, the transition to adulthood, care duties and economic activities are covered by the survey.

Purpose:

The GGP aims to improve understanding of demographic and social changes and the factors influencing them. The GGP is particularly important for the study of relationships between children and parents (generations) and between couples (gender).

### **Data contains personal data**

No

### **Unit of analysis**

[Individual](#)

### **Population**

People aged 18-79 years residing in one of the 19 countries included in the study

### **Time Method**

[Longitudinal: Panel](#)

## **Sampling procedure**

### Probability: Simple random

Proportional-to-size sampling with a simple random sampling (SI) within strata. Samples were to be stratified by sex, age and metro/non-metro residence.

## **Time period(s) investigated**

2001 – Ongoing

## **Number of individuals/objects**

9688

## **Response rate/participation rate**

53.8%

## **Data format / data structure**

### Numeric

## **Data collection 1**

- Mode of collection: Self-administered questionnaire
- Description of the mode of collection: Self-administered postal questionnaire or online alternative for information on: household economy, household work, decision making, social and economic exchange, Health and Wellbeing, values, beliefs, Subjective norms, and intentions.
- Time period(s) for data collection: 2012-04 – 2013-04
- Source of the data: Population group

## **Data collection 2**

- Mode of collection: Telephone interview
- Description of the mode of collection: Telephone interview (CATI WinDATI at Statistics Sweden) and Registers for information on: family of origin, current partner, children, partner history, fertility intentions, education, employment, occupation and income (respondent and current partner).
- Time period(s) for data collection: 2012-04 – 2013-04
- Source of the data: Population group

## **Geographic spread**

Geographic location: [Sweden](#), [Australia](#), [Belgium](#), [Bulgaria](#), [Estonia](#), [France](#), [Georgia](#), [Italy](#), [Japan](#), [Lithuania](#), [Netherlands](#), [Norway](#), [Poland](#), [Romania](#), [Russian Federation](#), [Czech Republic](#), [Germany](#), [Hungary](#), [Austria](#)

Geographic description:

Wave 1 was conducted in 19 countries.

Wave 2 was conducted in 12 countries.
