Description

The environmental health survey is carried out in collaboration between the Institute of Environmental Medicine at Karolinska Institutet and the Statistics Sweden, on behalf of the Public Health Agency of Sweden. The study has previously been conducted in 1999 and 2007.

The national environment health survey 2015 was sent to 88,091 randomly selected persons in the whole country. The target population were everyone aged 18-84 living in Sweden during the last five years. More than 37,000 people responded to the questionnaire, which represents a response rate of 42 percent.

The questionnaire contains questions about exposure, annoyance, symptoms and diseases related to environmental factors. SCB completed answered questionnaires with register data.

In most cases, the questions are the same as in previous environmental health surveys (2007 and 1999).

Purpose:

The aim was to chart environmental exposure and environmental illness in the adult population.

Data contains personal data

No

Unit of analysis

[Individual](#)

Population

All individuals aged between 18-84, who have been resident in Sweden for the last five years.

Time Method

[Cross-section](#)

Sampling procedure

[Probability](#)

Urvalet gjordes slumpvis inom varje län och bestod av två delar. I den första delen, grundurvalet, valdes 10 500 personer ut. Dessa var jämnt fördelade mellan Sveriges 21 län och bestod av 500 personer per län. Den andra delen bestod av ett utökat urval för 18 län som valt att delta med sammanlagt ytterligare 77 800 personer.

Number of individuals/objects

37133

Response rate/participation rate

42%
