Description

In the mid-1960s, Testologen AB in collaboration with a group of advertisers, introduced a new way of investigation, where data about the target groups - socio-economic data, interests, purchasing habits, possessions, buying intentions - and data on reading habits were collected in the same survey. At SND there are now surveys available from the Sweden Now series covering a 20-year period, 1972-1991.

The 1972 survey contains a number of questions about reading-habits. The respondents had to indicate how often they read a number of papers within the daily (big city), weekly and monthly press. Other questions dealt with the household's possession of a number of capital goods and pets. The respondents were asked about their interests in different activities and about their interest in receiving information about a number of subjects. There is information about the respondent's gender, marital status, age, income, occupation, education and housing, and also about the household's size, age structure, and total income of household.

Purpose:

Collect broad information about interests, purchasing habits and media choices

Subset of Sweden Now 1972-II, covering the period 1972-02-23 to 1972-04-07.

Data contains personal data

No

Language
