## Description

"Where is your Stockholm?" ("Var är ditt Stockholm?") is the first Public Participatory GIS (PPGIS) survey to address emotional, social, and environmental qualities at once. The social-ecological picture of Stockholm that emerges from the data can be used for a variety of different purposes; from analysis of everyday routines, to where people in Stockholm connect to the green infrastructure.

Purpose:

The dataset aims to describe positive and negative experiences that exist in the landscape of Stockholm together with social, environmental and psychological attributes. Because all datapoints are geographically mapped using GIS, this dataset provides a social-ecological understanding of Stockholm.

## Data contains personal data

No
