DESCRIPTION OF THE FIELDWORK

Survey coordinator: Kantar TNS (Project managers Alise Lace and Santa Lazdina)

Fieldwork performer in Czech Republic: TNS Aisa

Fieldwork performer in Slovakia: TNS Slovakia

Fieldwork performer in Poland: TNS Polska

Fieldwork performer in Hungary: TNS Hoffmann

Fieldwork performer in Bulgaria: BBSS EOOD (a TNS company)

Fieldwork performer in Romania: TNS BBSS EOOD (a TNS company)

Fieldwork performer in Slovenia: TNS BBSS EOOD (a TNS company)

Fieldwork performer in Croatia: Henda Ltd.

Preparation of data file and tables: Elina Murniece, Jekaterina Podsebjakina, Gundars Sporans (Kantar TNS)

Description of methodology

CAPI (Computer Assisted Personal Interviews) method – respondent selection (recruitment) and direct computerized interviews were performed at the respondents' place of residence. In all countries interviews were conducted in one – state's official – language.

Before the fieldwork, the survey questionnaire were programmed, using *NIPO CAPI System*, and the computerized questionnaire was tested.

Pilot interviews

A pilot study was conducted in order to test the respondents' understanding of the questionnaire and to measure the actual length of interview. In total, 20 pilot interviews were conducted in each country.

Sampling principle

To obtain a representative sample of the research target group, the multi-stage stratified random sampling was used in this study.

The target of the sampling procedure is to select respondents who correspond definite statistical parameters. The essence of random sampling is that all persons from the relevant target group must have equal opportunities to be selected. Any potential survey participant who is part of the relevant target group, irrespective of his/her place of residence and any other conditions, should have an equal opportunity to be surveyed. To realize it the method of multi-stage stratified random sampling was used in most of the countries, apart from Czech Republic and Slovakia, which used combined sampling approach – multi-stage stratified random and quota sampling.

The principle of selecting the respondent

The principle of birthday rule was used in the Social-Political Survey 2016.

When applying the principle of the birthday rule the interviewer makes a choice among persons present at home **at the time of the visit. Interviewer chooses a respondent, who is 15-74 years old, who lives permanently in the particular household and who is the next one having a birthday.** If the particular respondent was not present at the time of the visit, the interviewer made an appointment (to visit the household some other time). If the chosen respondent refused to participate, the respondent was not replaced with another member of the household and the particular address was closed.

Quality control

Quality control was carried during all research stages (interview control, interviewer control, data control):

- The structure of the computerized questionnaire is set up in a way that the interviewer cannot miss any question: the switching of the questions during interviews is automatic and the same sequence of the questions is provided.
- The work of interviewers is controlled by checking 10% of interviews by phone, making repeated calls.
- Data control (cleaning and checking) was performed.
- The International quality and professional codes and standards (ESOMAR/ICC International Code on Market and Social Research) are binding to TNS.

Data processing

The obtained data was processed, using *IBM SPSS Statistics 22* program. The achieved sample was compared to the available statistical data. To prevent any deviation from the statistical data of the general population, the achieved sample was weighed by 5 parameters prior to the processing - gender, age, urbanization, region and nationality in accordance with the officially available data of statistics in each country.

Survey method:	CAPI (Computer Assisted Personal Interviews)							
Target group:	Inhabitants of Bulgaria, Croatia, Czech Republic, Hungary, Poland, Romania, Slovakia, Slovenia, aged 15 - 74							
	Bulgaria	Croatia	Czech Republic	Hungary	Poland	Romania	Slovakia	Slovenia
Sample size:	N= 1011	N=1020	N=1008	N=1018	N=1019	N=1000	N=1038	N=1012
Survey time:	02.09 - 31.10.2016	05.09.-28.10.2016	13.08.- 07.10.2016	02.09 - 31.10.2016	02.09- 13.10.2016	02.09 - 31.10.2016	05.09. - 20.09.2016	02.09 - 31.10.2016

Number of interviewers:	71	64	114	104	114	62	124	47
Average lengths of interview:	44	34	37	36	37	30	36	33
Geographical coverage:	Nationally representative							
Sampling method:	Random route (except for Czech Republic and Slovakia, where combined sampling method was used)							
Sample size:								
- planned	1000	1000	1000	1000	1000	1000	1000	1000
- achieved	1011	1020	1008	1018	1019	1000	1038	1012
Number of sampling points:	101	252	150	102	210	100	130	102
- Capital city	17	41	13	18	85	10	5	14
- other cities/ towns	35	117	60	53		46	50	37
- rural areas	49	94	77	31	125	44	75	51
Parameters used for weighting	Gender, age, nationality, type of settlement, region							

A. ECONOMIC ISSUES

A1. Please, think about the recent financial crisis (circa 2008 and onwards) in our country. Who do you think was responsible for the crisis? (!)

Regarding research results, there always is a certain probability of statistical error that should be taken into account when analysing and interpreting results. Those differences that fall within the margins of statistical error or are less than that, can be regarded as insignificant

To determine the error of statistical measure it is necessary to know the number of respondents in the respective subgroup (in graphs marked as "n") and the result in percentage. Using these values, in the respective section of the table there can be found error margins of statistical measure +/- percentage with 95% probability

For example, if out of all "Post-Crimea Barometer" respondents (n=3550) 45% think that Politicians (in our country) were entirely responsible for the crisis, then with 95% probability we can say that in this case the error of statistical measure is in margins of +/-1.6 %. It follows that the number of respondents, who think that Politicians (in our country) were entirely responsible for the crisis ranges from 43.4% to 46.6%.
