1 Introduction

1.1 The Quality of Government Institute

The QoG Institute was founded in 2004 by Professor Bo Rothstein and Professor Sören Holmberg. It is an independent research institute within the Department of Political Science at the University of Gothenburg. The institute conducts research on the causes, consequences and nature of Good Governance and the Quality of Government (QoG) - that is, trustworthy, reliable, impartial, uncorrupted, and competent government institutions.

The main objective of the research is to address the theoretical and empirical problems of how political institutions of high quality can be created and maintained. A second objective is to study the effects of Quality of Government on a number of policy areas, such as health, environment, social policy, and poverty. While Quality of Government is the common intellectual focal point of the research institute, a variety of theoretical and methodological perspectives are applied.

1.2 The QoG Data

One aim of the QoG Institute is to make comparative data on QoG and its correlates publicly available. To accomplish this, we have compiled several datasets that draw on a number of freely available data sources, including aggregated individual-level data. The QoG datasets are available in several file formats, making them usable in most statistical softwares as well as in Excel.

The QoG Standard Dataset is our largest dataset consisting of more than 2,000 variables. For those who prefer a smaller dataset, we provide the QoG Basic Dataset, consisting of approximately the 300 most used variables from the QoG Standard Dataset. We also provide a dataset called the QoG OECD Dataset which covers OECD member countries and has high data coverage in terms of geography and time.

The Standard, Basic, and OECD datasets are all available in both time-series (TS) and cross-sectional (CS) versions, as separate datasets. In the TS datasets, the unit of analysis is country-year (e.g. Sweden-1984, Sweden-1985 and so on). The CS datasets, unlike the TS datasets, do not include multiple years for a particular country, therefore, the unit of analysis is country. Although, many of the variables are available in both TS and CS, some variables are not, so it is advisable to use the codebook to see which variables are included. Each variable entry in this codebook specifies in which dataset you will find the variable.

The variables in the Standard, Basic, and OECD datasets are categorized in 19 thematic categories. This categorization should be seen as a guideline rather than a definite classification. Most variables belong only to one category, but some variables belong to more than one category.

On the QoG website, we also provide three additional datasets. The QoG Expert Survey (2015), the QoG EU Regional Dataset (2016 and 2020) and the QoG EQI Dataset (2010, 2013 and 2017). The QoG Expert Survey is a dataset based on a survey among experts on public administration around the world. The data is available in an individual dataset and an aggregated dataset. The QoG EU Regional dataset is a dataset consisting of approximately 450 variables covering three levels of European regions. The EQI dataset is based on a survey among 34,000 respondents and concerns corruption on a regional level within the EU (NUTS 2).

Previous versions of all our datasets are available in the Data Archive on the QoG website:

<https://www.gu.se/en/quality-government/qog-data/data-downloads/data-archive>

1.3 Important note on the terms of use of these datasets

The QoG datasets are open and available, free of charge and without a need to register your data. You can use them for your analysis, graphs, teaching, and other academic-related and non-commercial purposes. We ask our users to cite always the original source(s) of the data and our datasets.

We do not allow other uses of these data including but not limited to redistribution, commercialization and other for-profit usage. If a user is interested in such use or has doubts about the license, they will have to refer to the original source and check with them if this is allowed and what requirements they need to fulfill.

Be mindful the original data sources are the only owners of their data and they can adjust their license without previous warning.

1.4 QoG OECD Dataset

1.4.1 Cross-Sectional (CS)

In the QoG OECD CS dataset, data from and around 2018 is included. Data from 2018 is prioritized, however, if no data are available for a country for 2018, data for 2019 is included. If no data for 2019 exists, data for 2017 is included, and so on up to a maximum of +/- 3 years.

While this works fine for some variables, it does not for others. For GDP growth it might be far from ideal to use figures from the following or previous year, whereas it might be more or less unproblematic for bureaucratic structures, which are more stable and fluctuate less. We advise you to carefully read the codebook and use your own judgment when using the CS dataset.

Besides the quality criteria for including new datasets and variables into the QoG datasets, we have chosen to add a few rules regarding the number of countries and years a variable must have available in order to be included in these datasets. This also might mean that the original dataset may include other variables, and we urge the users of these datasets to check the original sources as well. For the QoG OECD CS dataset, we drop variables that have information for less than 30 countries after we have picked the data from the focus year or +/- 3 years.

In the description of each variable in this codebook, there are basic descriptive statistics (minimum year, maximum year and number of countries (N)) and a map indicating the countries that have data for that specific variable in the CS dataset. If the variable is not included in the CS dataset there is a text simply stating that this is the case. The maps should not be confused as visualizations of the data itself; they are only visualizations of the data availability in the dataset.

1.4.2 Time-Series (TS)

In the QoG OECD TS dataset, data from 1946 to 2021 are included and the unit of analysis is country-year (e.g. Sweden-1946, Sweden-1947 and so on).

Regarding the inclusion of variables according to the countries and years covered, for the QoG OECD TS dataset, we drop variables that have information for less than 30 countries and less than ten years.

In each entry in this codebook there are basic descriptive statistics (minimum year, maximum year, number of countries (N), number of observations (n), average number of countries per year (\bar{N}) and average number of years per country (\bar{T})) and a bar graph indicating the number of countries with data available each year from 1946 to 2021. If the variable is not included in the TS dataset, there is a text simply stating that this is the case. These should not be confused as visualizations of the data itself; it is only visualizations of the data availability in the datasets.

1.4.3 Country and Time Coverage

We included all 35 countries which were members of OECD in the end of year 2021. The data is provided for these countries in TS from the 1946 until present time. For some countries data is presented from the year of independence or the year of the last major border changes, if they were after 1946 (South Korea from 1948, Slovenia from 1991 etc.). In the Appendix we have included the full list of countries and a short note on how we have reasoned for each country.

Unfortunately, no established international standard exists on how historical cases, resulting either from country mergers or country splits, should be treated in a time-series setting. We have applied the following principles:

After a merger of two countries, the new country is considered a new case, even when the new state formed could be considered as a continuation of one of the merging states. This rule applies to: Germany, which merged from East and West Germany in 1990. If a country has split, the

new countries are considered new cases, even when one of the new states could be considered as a continuation of the state that split. This rule applies to: (1) Czechoslovakia, which was split into the Czech Republic and Slovakia in 1993; (2) France which was split into France and Algeria in 1962.

Since most of the original data sources treat these cases of country mergers and splits differently, we have rearranged data in accordance with our criteria above. Consequently, if a merger or a split has occurred and a data source does not treat the countries as different cases, we consider them to be different cases.

To determine where to put the data for the year of the merger/split and when to include data for a newly independent country, we have relied on the July 1st-principle. If the merger/split or independence occurred after July 1st, the data for this year will belong to the historical country or it will not be included. Thus, for example: If Germany in a data source is treated as a continuation of West Germany, we place data up to and including 1990 on West Germany and leave Germany blank until and including 1990, since the merger of Germany occurred in October 1990 (after July 1st, 1990).

1.4.4 A brief note on the QoG OECD 2022 update

To improve consistency and compatibility of statistical data related to QoG, we continuously work to improve the coverage and data quality. For the 2022 update of the QoG OECD Dataset, we have included five new data sources that previously were not part of the QoG datasets. These are:

- Remittances Data (World Bank, 2021a). This dataset provides a snapshot of latest statistics on remittance flows for 214 countries and territories.
- Hanson & Sigman's State Capacity Index (Hanson and Sigman, 2021). It presents a new measurement of state capacity based on the extractive capacity, coercive capacity, and administrative capacity.
- Growth Projections and Complexity Rankings (Growth Lab at Harvard University, 2019). The dataset includes growth forecasts for the upcoming decade as well as rankings of countries by their current economic complexity.
- COVID-19 Data Repository (Ensheng, Du and Gardner, 2020). The repository contains data on confirmed COVID-19 cases, deaths, recoveries, and tests at the national level.
- Bjørnskov-Rode regime data (Bjørnskov and Rode, 2020). It updates Cheibub, Gandhi and Vreelands DD dataset and expands it to recent years.

1.5 Thematic Categories

1.5.1 Quality of Government

This category includes variables that are the core features of QoG (impartiality, bureaucratic quality and corruption) as well as measures that are broader (rule of law and transparency).

1.5.2 Civil Society/Population/Culture

This category includes variables that relate to social capital, personal beliefs, size and distribution of the population as well as ethnic and linguistic fractionalization.

1.5.3 Conflict

This category includes variables concerning armed conflict, including civil war and terrorism, government revenue and spending related to violent conflict (military expenditure, arms imports, military personnel).

1.5.4 Education

This category includes a variety of indicators related to education, such as key characteristics of the educational system (public expenditure, gross enrollment, number of teachers), the students (age, gender, educational level), and educational outcomes (mean scores, literacy rates, numbers of researchers and scientists).

1.5.5 Energy and Infrastructure

This category includes indicators that cover descriptions of different energy sources (production, consumption and trade) and variables related to quality and quantity of different sectors of infrastructure (transportation and communication).

1.5.6 Environment

This category includes geographical characteristics such as the geographical region, land area etc. as well as indicators describing the state of the environment, ecosystems and materials, the impact of human beings on the environment, and environmental protection.

1.5.7 Gender Equality

This category includes variables related to the differences of access and opportunities between women and men by country, such as access to education, overall employment and employment by specific sectors, and indexes that shine a light on the general differences in treatment between men and women.

1.5.8 Health

This category includes indicators describing the health of a population in a given country. These include reports about self-perceived health (state of health), policies and provided infrastructure

concerning health (expenditure, number of hospitals), the prevalence of diseases (HIV, tuberculosis), and indicators such as birth rate, death rate and life expectancy.

1.5.9 History

This category includes variables related to historical phenomena or situations, for example colonial origin, legal origin and GDP per capita in the year 1500.

1.5.10 Judicial

This category includes judicial indicators, generally covering legal rights granted by a state to its citizens and their compliance, as well as measures of crimes and the overall state of the judicial system.

1.5.11 Labour Market

This category includes variables about employment, unemployment and union density rate, in general, as well as in subgroups of the population.

1.5.12 Media

This category includes indicators on the freedom of the media in a given country (freedom of the press, regulation of the media) as well as the public access and confidence in the media.

1.5.13 Migration

This category includes indicators related to migratory phenomena such as immigration rates, level of education, brain drain, and refugee population.

1.5.14 Political Parties and Elections

This category includes variables describing various aspects of the legislature and political parties in the legislature (number of seats) as well as variables related to the election for the executive and variables on the outcomes of elections.

1.5.15 Political System

This category includes variables describing the rules of the political system (presidential or parliamentary system), the chief executive (years in office), regime type, stability (age of present regime), and checks and balances as well as aspects of federalism.

1.5.16 Public Economy

This category includes economic indicators that reflect the involvement of the government in the economy (taxes, tariff rates and government expenditures), economic key figures of a state (GDP, inflation, and economic inequality), and indicators that characterize the state of the economy (aid-flows, debt).

1.5.17 Private Economy

This category includes variables characterizing the private sector in a country, inter alia: regulation of the private sector, indicators concerning economic characteristics of groups in the society, such as poverty and household consumption, as well as tax rates.

1.5.18 Religion

This category includes variables regarding numbers of followers of specific religions and the status of religion in the constitution.

1.5.19 Welfare

This category includes indicators on government expenditure related to social welfare (pension, sickness coverage and accidents coverage).

1.6 Changes in this edition

For this edition of the dataset, we had the following changes:

Adoption of ISO-standard country names and codes:

- To make the data-merging processes easier for our users, we have replaced our **country name (cname)** and **country code (ccode)** variables with the ISO-3166-1 standard country names and numeric codes. Whenever the numeric code or name does not exist in the ISO standard, we imputed the code and name used by the QoG standard, making sure it did not clash with previous codes. For example, the QoG name standard for France is France (-1962) and France (1963-). With adopting the ISO standard, the name is France for both entities.
- The QoG country names and codes are renamed as `cname_qog` and `ccode_qog` respectively.

Changes in variables:

- All variables of the Educational Attainment Dataset are now recorded for population between 15 years old to 64 years old.
- In the CIRIGHTS Data project, the variables "Empowerment index" (`ciri_empinx`) and "New Freedom of Religion" (`ciri_relfre`) are using the new methodology provided by the dataset.
- The variable "Number of contracts won by a supplier registered at a foreign address" (`ciri_foreign`) from the Corruption Risks Indicators was added.
- The variable "Democracy measure, requiring min. 50% of adult women have the right to vote" (`bmr_demfsuf`) from Boix-Miller-Rosato Dichotomous Coding of Democracy, 1800-2020 was added.
- The variable "Patent applications to the EPO, Per million of active population" (`eu_sctrtotp-minapop`) from Eurostat was dropped by the original source. Consequently, this variable is also dropped in this version.
- In the IMF GFS Expenditure by Functions of Government (COFOG) dataset, we have renamed the variables "Expenditure on social protection, as
- For the Index of Public Integrity, we have included only the "Index of Public Integrity" (`ipi_ipi`).
- The variable "Presence of peace keepers (number)" (`wdi_peacekeep`) from the World Development Indicators was dropped by the original source. Consequently, this variable is also dropped in this version.
- In the dataset of the World Values Survey, the variables: "REGR factor score 1 for analysis 1" (`wvs_tradrat`), "REGR factor score 2 for analysis 1" (`wvs_survself`), "Extent of political corruption" (`wvs_polcor`), "How often do you drink alcohol" (`wvs_alc`) and "All religions should be taught in public schools" (`wvs_relsch`) were dropped due to their lack of availability for several waves. The question: "Men make better political leaders than women do" (`wvs_menpol`) was added.

Changes in datasets:

- We have added again the datasets from Freedom House (Freedom of the Press, Freedom of the Net and Freedom in the World) and the The CIRIGHTS Data project.
- Following the independent audit and discontinuation of the dataset, we have dropped the Ease of Doing Business dataset.

- Fragile State Index from Fund For Peace and Index of Economic Freedom from Heritage Foundation have been dropped.
- Five new datasets are added to our database: Remittances Data (World Bank, 2021a), Hanson & Sigman's State Capacity Index (Hanson and Sigman, 2021), Growth Projections and Complexity Rankings (Growth Lab at Harvard University, 2019), OVID-19 Data Repository (Ensheng, Du and Gardner, 2020) and Bjørnskov-Rode regime data (Bjørnskov and Rode, 2020).

Acknowledgements

We would like to thank Inken Schütt and Raymond Samo for their invaluable help in the production of these codebooks.

2 List of Variables by Categories

2.1 Quality of Government

The Bayesian Corruption Indicator (bci_bci)	73
The standard deviation of The Bayesian Corruption Indicator (bci_bcistd)	74
Number of previous democratic breakdowns (bmr_dembr)	89
Corruption Commission Present in Constitution (ccp_cc)	106
Meritocratic Recruitment of Civil Servants Mentioned in Constitution (ccp_civil)	107
State Fragility Index (cspf_sfi)	136
E-Government Index (egov_egov)	146
E-Participation Index (egov_epar)	147
Human Capital Index (egov_hci)	147
Functioning of Government (fh_fog)	165
Personal Autonomy and Individual Rights (fh_pair)	165
Political Rights (fh_pr)	166
ICRG Indicator of Quality of Government (icrg_qog)	231
Hanson & Sigman State Capacity Index (lld_capacity)	271
Standard Deviation for Hanson & Sigman State Capacity Index (lld_capstd)	271
The Property Right Protection Index (prp_prp)	329
Estimated variance of the PRP point estimate (prp_std)	329
Entry at the lowest level only (qs20_close1)	337
Entry via examination (qs20_close2)	338
Special Laws (qs20_close3)	338
Closedness Index, constructed with PCA (qs20_close_pca)	338
Political Interference (qs20_impar1)	338
Political Interference, lower limit of 95% CI (qs20_impar1_lowci)	339
Political Interference, upper limit of 95% CI (qs20_impar1_upci)	339
Impartiality (qs20_impar2)	339
Impartiality, lower limit of 95% CI (qs20_impar2_lowci)	339
Impartiality, upper limit of 95% CI (qs20_impar2_upci)	340
Patronage (qs20_proff1)	340
Patronage, lower limit of 95% CI (qs20_proff1_lowci)	340
Patronage, upper limit of 95% CI (qs20_proff1_upci)	340
Merit (qs20_proff2)	341
Merit, lower limit of 95% CI (qs20_proff2_lowci)	341
Merit, upper limit of 95% CI (qs20_proff2_upci)	341
Tenure (qs20_proff3)	341
Tenure, lower limit of 95% CI (qs20_proff3_lowci)	342
Tenure, upper limit of 95% CI (qs20_proff3_upci)	342
Professionalism Index, constructed with PCA (qs20_proff_pca)	342

Ethnic Fractionalization in the year 2000 (al_ethnic2000)	58
Language Fractionalization in the year 2000 (al_language2000)	58
Religion Fractionalization in the year 2000 (al_religion2000)	59
Right to Marry in Constitution (ccp_marriage)	109
Right to Same-Sex Marriages in Constitution (ccp_samesexm)	110
Freedom of Assembly and Association (ciri_assn)	115
Social Globalization (dr_sg)	142
Cultural Diversity (fe_cultdiv)	161
Ethnic Fractionalization (fe_ETFra)	161
Plurality Group (fe_plural)	162
Overall Global Gender Gap Index (gggi_ggi)	187
Population (in the 1000's) (gle_pop)	192
Displaced people (1-5 Higher displacement) (gpi_dic)	202
Global Peace Index (1-5 Less peaceful) (gpi_gpi)	203
Incarceration (1-5 Higher incarceration) (gpi_jail)	203
Safety and Security (1-5 Less secure) (gpi_ss)	204
Children Living in Single-Mother Families (%) (lis_clsmf)	264
Population growth rates (oecd_evopop_g1)	289
Population levels (oecd_evopop_t1)	289
Foreign-born population (oecd_migforpop_t1a)	308
Population (in millions) (pwt_pop)	334
Ethnolinguistic fractionalization (1961) (r_elf61)	343
Ethnolinguistic fractionalization (1985) (r_elf85)	343
Cinema expenditure per capita (une_cinexp)	377
Screen per capita (per 100,000 inhabitants) (une_screen)	382
Women political empowerment index (vdem_gender)	398
Birth rate, crude (per 1,000 people) (wdi_birth)	412
Completeness of birth registration (%) (wdi_birthreg)	413
Births attended by skilled health staff (% of total) (wdi_birthskill)	413
Death rate, crude (per 1,000 people) (wdi_death)	414
Completeness of death registration with cause-of-death information (%) (wdi_deathreg)	415
Fertility rate, total (births per woman) (wdi_fertility)	431
Life expectancy at birth, total (years) (wdi_lifexp)	454
Life expectancy at birth, female (years) (wdi_lifexpf)	454
Life expectancy at birth, male (years) (wdi_lifexpm)	455
Mortality rate, adult, female (per 1,000 female adults) (wdi_mortf)	456
Mortality rate, infant (per 1,000 live births) (wdi_mortinf)	456
Mortality rate, infant, female (per 1,000 live births) (wdi_mortinff)	456
Mortality rate, infant, male (per 1,000 live births) (wdi_mortinfm)	456
Mortality rate, adult, male (per 1,000 male adults) (wdi_mortm)	457
Mortality rate, neonatal (per 1,000 live births) (wdi_mortnn)	457
Mortality rate, under-5 (per 1,000 live births) (wdi_mortu5)	457
Mortality rate, under-5, female (per 1,000 live births) (wdi_mortu5f)	457
Mortality rate, under-5, male (per 1,000 live births) (wdi_mortu5m)	458
Population, total (wdi_pop)	461
Population ages 0-14 (% of total population) (wdi_pop14)	461
Population ages 15-64 (% of total population) (wdi_pop1564)	462
Population ages 65 and above (% of total population) (wdi_pop65)	462
Population density (people per sq. km of land area) (wdi_popden)	462
Population, female (% of total population) (wdi_popf)	462
Population growth (annual %) (wdi_popgr)	463
Rural population (% of total population) (wdi_poprul)	463
Rural population growth (annual %) (wdi_poprulgr)	463
Urban population (% of total population) (wdi_popurb)	463
Urban population growth (annual %) (wdi_popurbagr)	464
E-Participation Index . 0-1 (best) (wef_epi)	480

Citizen Rights (wel_citrig)	492
Justifiable: someone accepting a bribe (wvs_jabrike)	517
Justifiable: cheating on taxes (wvs_jacot)	517
Post-Materialist index 4-item (wvs_pmi4)	518

2.3 Conflict and Military Service

Member of an Alliance (atop_ally)	70
Consultancy Obligation (atop_consult)	70
Defensive Obligation (atop_defensive)	70
Neutrality Obligation (atop_neutrality)	71
Non-Aggression Obligation (atop_nonagg)	71
Number of Alliances (atop_number)	71
Offensive Obligation (atop_offensive)	72
Transition Year (atop_transyr)	72
Global Militarization Index (bicc_gmi)	79
Heavy Weapons Index (bicc_hw)	80
Military Expenditure Index (bicc_milexp)	80
Military Personnel Index (bicc_milper)	80
Political Terror Scale - Amnesty International (gd_ptsa)	178
Political Terror Scale - US State Department (gd_ptss)	179
Expenditure on defense, as % of total gen. gov. exp. (gfs_def)	184
Ongoing Conflict (1-5 Higher intensity of conflict) (gpi_conf)	202
Militarisation (1-5 Higher militarisation) (gpi_mil)	203
Executive Power over Military Force (iaep_epmf)	222
Some other executive have the power to use force abroad (iaep_milo)	225
Riots and Protests after Election (nelda_rpae)	277
Violence and Civilian Deaths before Election (nelda_vcdbe)	277
Structure of central gov. expenditures, defence (oecd_gengovdistri_t1b)	295
Societal Violence Scale Index 1-5 (svs_ind)	366
Internationalized internal armed conflict (ucdp_type4)	372
Global Terrorism Index (voh_gti)	402
Political Stability and Absence of Violence/Terrorism, Estimate (wbgi_pve)	405
Political Stability and Absence of Violence/Terrorism, Number of Sources (wbgi_pvn)	405
Political Stability and Absence of Violence/Terrorism, Standard Error (wbgi_pvs)	405
Armed forces personnel (% of total labor force) (wdi_afp)	410
Armed forces personnel, total (wdi_afpt)	410
Arms exports (SIPRI trend indicator values) (wdi_armexp)	411
Arms imports (SIPRI trend indicator values) (wdi_armimp)	412
Military expenditure (% of GDP) (wdi_expmil)	428
Military expenditure (% of general government expenditure) (wdi_expmilge)	429
Terrorism incidence. 1 (very high) - 100 (no incidence) (wef_ti)	489
Number of cabinet ministers with a military title (wgov_minmil)	498
Number of people with a military title, based on all entries for the country in (wgov_totmil)	500
Willingness to fight for country (wvs_fight)	515

2.4 Education

Average Schooling Years, Female (bl_asyf)	84
Average Schooling Years, Male (bl_asyf)	84
Average Schooling Years, Female and Male (bl_asyf)	85
Percentage with Tertiary Schooling, Female (bl_lhf)	85
Percentage with Tertiary Schooling, Male (bl_lhm)	85
Percentage with Tertiary Schooling, Female and Male (bl_lhmf)	85
Percentage with Primary Schooling, Female (bl_lpf)	86
Percentage with Primary Schooling, Male (bl_lpm)	86
Percentage with Primary Schooling, Female and Male (bl_lpmf)	86
Percentage with Secondary Schooling, Female (bl_lsf)	86
Percentage with Secondary Schooling, Male (bl_lsm)	87
Percentage with Secondary Schooling, Female and Male (bl_lsmf)	87
Percentage with No Schooling, Female (bl_luf)	87
Percentage with No Schooling, Male (bl_lum)	87
Percentage with No Schooling, Female and Male (bl_lumf)	88
Educational Attainment (15-24 years, Female) (gea_ea1524f)	180
Educational Attainment (15-24 years, Male) (gea_ea1524m)	180
Educational Attainment (25-34 years, Female) (gea_ea2534f)	181
Educational Attainment (25-34 years, Male) (gea_ea2534m)	181
Educational Attainment (35-44 years, Female) (gea_ea3544f)	181
Educational Attainment (35-44 years, Male) (gea_ea3544m)	181
Educational Attainment (45-54 years, Female) (gea_ea4554f)	181
Educational Attainment (45-54 years, Male) (gea_ea4554m)	182
Educational Attainment (55-64 years, Female) (gea_ea5564f)	182
Educational Attainment (55-64 years, Male) (gea_ea5564m)	182
Educational Attainment (65+ years, Female) (gea_ea65f)	182
Educational Attainment (65+ years, Male) (gea_ea65m)	183
Expenditure on education, as % of total gen. gov. exp. (gfs_educ)	184
Global Gender Gap Educational Attainment Subindex (gggi_eas)	187
Medical graduates (oecd_doctor_g3)	287
Structure of central gov. expenditures, education (oecd_gengovdistrib_t1i)	296
Employment rates of native-born pop. by edu. attainment: total (oecd_migeduemp_t1c)	307
Employment rates of foreign-born pop. by edu. attainment: total (oecd_migeduemp_t1f)	308
Nursing graduates (oecd_nurse_g3)	309
Human capital index, see note hc (pwt_hci)	332
Sustainable Policies: Social Policies - Education (sgi_soed)	360
Human Development Index (undp_hdi)	375
Gross intake ratio to the last grade of lower secondary general education, femal (une_girlglf)	377
Gross intake ratio to the last grade of lower secondary general education, male (une_girlglm)	377
Gross intake ratio to the last grade of lower secondary general education, both (une_girlglst)	378
Gross intake ratio to the last grade of primary education, female (%) (une_girlgpf)	378
Gross intake ratio to the last grade of primary education, male (%) (une_girlgpm)	378
Gross intake ratio to the last grade of primary education, both sexes (%) (une_girlgpt)	378
Official entrance age to early childhood education (years) (une_oaece)	379
Official entrance age to primary education (years) (une_oaepe)	379
Official entrance age to compulsory education (years) (une_oaece)	379
Official entrance age to lower secondary education (years) (une_oaels)	380
Official entrance age to post-secondary non-tertiary education (years) (une_oaepsnt)	380
Official entrance age to upper secondary education (years) (une_oaeus)	380
Repetition rate in lower secondary general education (all grades), female (%) (une_reprlrf)	380
Repetition rate in lower secondary general education (all grades), male (%) (une_reprlrm)	381
Repetition rate in lower secondary general education (all grades), both sexes (%) (une_reprlrs)	381
Repetition rate in primary education (all grades), female (%) (une_reprpfr)	381
Repetition rate in primary education (all grades), male (%) (une_reprprm)	381
Repetition rate in primary education (all grades), both sexes (%) (une_reprprt)	382
Survival rate to Grade 4 of primary education, female (%) (une_surg4pfr)	382

Survival rate to Grade 4 of primary education, gender parity index (GPI) (une_surg4pegpi)	382
Survival rate to Grade 4 of primary education, male (%) (une_surg4pem)	383
Survival rate to Grade 4 of primary education, both sexes (%) (une_surg4pet)	383
Survival rate to Grade 5 of primary education, female (%) (une_surg5pef)	383
Survival rate to Grade 5 of primary education, gender parity index (GPI) (une_surg5pegpi)	383
Survival rate to Grade 5 of primary education, male (%) (une_surg5pem)	384
Survival rate to Grade 5 of primary education, both sexes (%) (une_surg5pet)	384
Survival rate to the last grade of primary education, female (%) (une_surlgpef)	384
Survival rate to the last grade of primary education, gender parity index (GPI) (une_surlgpegpi)	384
Survival rate to the last grade of primary education, male (%) (une_surlgpem)	385
Survival rate to the last grade of primary education, both sexes (%) (une_surlgpet)	385
Theoretical duration of primary education (years) (une_tdurce)	385
Theoretical duration of early childhood education (years) (une_tdurece)	385
Theoretical duration of lower secondary education (years) (une_tdurls)	386
Theoretical duration of post-secondary non-tertiary education (years) (une_tdurpsnt)	386
Theoretical duration of upper secondary education (years) (une_tdurused)	386
Teachers in lower secondary education, female (number) (une_tilsef)	386
Teachers in lower secondary education, both sexes (number) (une_tilset)	387
Teachers in primary education, female (number) (une_tipef)	387
Teachers in primary education, both sexes (number) (une_tipet)	387
Teachers in pre-primary education, female (number) (une_tiprepef)	387
Teachers in pre-primary education, both sexes (number) (une_tiprepet)	388
Teachers in secondary education, female (number) (une_tisef)	388
Teachers in secondary education, both sexes (number) (une_tiset)	388
Teachers in upper secondary education, female (number) (une_tiuusef)	388
Teachers in upper secondary education, both sexes (number) (une_tiuuset)	389
School enrollment, primary, private (% of total primary) (wdi_eduprp)	415
School enrollment, secondary, private (% of total secondary) (wdi_eduprs)	416
Government expenditure on education, total (% of GDP) (wdi_expedu)	426
Government expenditure on education, total (% of government expenditure) (wdi_expeduge)	427
Expenditure on primary education (% of government expenditure on edu.) (wdi_expedup)	427
Expenditure on secondary education (% of government expenditure on edu.) (wdi_expedus)	427
Expenditure on tertiary education (% of government expenditure on edu.) (wdi_expedut)	428
Government expenditure per student, primary (% of GDP per capita) (wdi_expstup)	429
Government expenditure per student, secondary (% of GDP per capita) (wdi_expstus)	430
Government expenditure per student, tertiary (% of GDP per capita) (wdi_expstut)	430
School enrollment, primary (% gross) (wdi_gerp)	435
School enrollment, primary, female (% gross) (wdi_gerpf)	435
School enrollment, primary, male (% gross) (wdi_gerpm)	436
School enrollment, preprimary (% gross) (wdi_gerpp)	436
School enrollment, preprimary, female (% gross) (wdi_gerppf)	436
School enrollment, preprimary, male (% gross) (wdi_gerppm)	437
School enrollment, secondary (% gross) (wdi_gers)	437
School enrollment, secondary, female (% gross) (wdi_gersf)	437
School enrollment, secondary, male (% gross) (wdi_gersm)	437
School enrollment, tertiary (% gross) (wdi_gert)	438
School enrollment, tertiary, female (% gross) (wdi_gertf)	438
School enrollment, tertiary, male (% gross) (wdi_gertm)	438
School enrollment, primary (% net) (wdi_nerp)	458
School enrollment, primary, female (% net) (wdi_nerpf)	458
School enrollment, primary, male (% net) (wdi_nerpm)	459
Adjusted net enrollment rate, primary (% of primary school children) (wdi_nerpr)	459
Adjusted net enrollment rate, primary female (% of primary school children) (wdi_nerprf)	459
Adjusted net enrollment rate, primary male (% of primary school children) (wdi_nerprm)	459
School enrollment, secondary (% net) (wdi_ners)	460
School enrollment, secondary, female (% net) (wdi_nersf)	460
School enrollment, secondary, male (% net) (wdi_nersm)	460
Digital skills among active population. 1-7 (best) (wef_dsap)	479

School life expectancy. Years (wef_lse)	484
Quality of vocational training. 1-7 (best) (wef_qvt)	487
Skillset of secondary-education graduates. 1-7 (best) (wef_shg)	488
Skillset of university graduates. 1-7 (best) (wef_sug)	488
University-industry collaboration in R&D (1-7) (wef_uic)	489

2.5 Energy and Infrastructure

Real value added: industry including energy (oecd_evova_t1b)	289
Production of crude oil (oecd_oilprod_t1)	310
Contribution of renewables to energy supply (oecd_renewable_t1)	312
Total primary energy supply per unit of GDP (oecd_tpes_t1)	316
Inland goods transport (oecd_transpgood_t1)	317
Generation intensities of municipal waste (oecd_waste_t1a)	320
Water abstractions per capita (oecd_water_t1a)	321
Total abstractions of water (oecd_water_t1b)	321
Electricity generation (oecd_welecggen_t1)	321
Total primary energy supply (oecd_wenergys_t1)	321
Gas exports, billion cubic feet per year (ross_gas_exp)	345
Net gas exports value, constant 2000 dollar (ross_gas_netexp)	345
Net gas exports value per capita, constant 2000 dollar (ross_gas_netexpc)	346
Constant price of gas in 2000 dollar/mboe (ross_gas_price)	346
Gas production, million barrels oil equiv. (ross_gas_prod)	346
Gas production value in 2000 dollars (ross_gas_value_2000)	346
Gas production value in 2014 dollars (ross_gas_value_2014)	346
Oil exports, thousands of barrels per day (ross_oil_exp)	347
Net oil exports value, constant 2000 dollar (ross_oil_netexp)	347
Net oil exports value per capita, constant 2000 dollar (ross_oil_netexpc)	347
Constant price of oil in 2000 dollar/brl (ross_oil_price)	347
Oil production in metric tons (ross_oil_prod)	348
Oil production value in 2000 dollars (ross_oil_value_2000)	348
Oil production value in 2014 dollars (ross_oil_value_2014)	348
Access to electricity (% of population) (wdi_ace1)	409
Access to electricity, rural (% of rural population) (wdi_ace1r)	409
Access to electricity, urban (% of urban population) (wdi_ace1u)	409
Alternative and nuclear energy (% of total energy use) (wdi_ane)	411
Fixed broadband subscriptions (per 100 people) (wdi_broadb)	413
Renewable electricity output (% of total electricity output) (wdi_elerenew)	416
Electricity production from coal sources (% of total) (wdi_elprodcoal)	416
Electricity production from natural gas sources (% of total) (wdi_elprodgas)	417
Electricity production from hydroelectric sources (% of total) (wdi_elprodhyd)	417
Electricity production from nuclear sources (% of total) (wdi_elprodnuc)	417
Electricity production from oil sources (% of total) (wdi_elprodoil)	417
Energy imports, net (% of energy use) (wdi_eneimp)	425
Renewable energy consumption (% of total final energy consumption) (wdi_enerenew)	425
Energy use (kg of oil equivalent per capita) (wdi_eneuse)	426
Fossil fuel energy consumption (% of total) (wdi_fossil)	432
Individuals using the Internet (% of population) (wdi_internet)	447
Mobile cellular subscriptions (per 100 people) (wdi_mobile)	455
Oil rents (% of GDP) (wdi_oilrent)	461
Electric power consumption (kWh per capita) (wdi_powcon)	465
Fixed telephone subscriptions (per 100 people) (wdi_tele)	470
Efficiency of air transport services. 1-7 (best) (wef_eair)	479
Electricity. 0-100 (best) (wef_elec)	480
Percentage of population with access to electricity % pop. (wef_elr)	480
Efficiency of seaport services. 1-7 (best) (wef_eport)	481
Efficiency of train services. 1-7 (best) (wef_erail)	481
Fixed-broadband Internet subscriptions/100 pop. (wef_fis)	481
Internet users. % pop. (wef_iu)	484
Mobile-cellular telephone subscriptions/100 pop. (wef_mobile)	485
Transport infrastructure. 0-100 (best) (wef_qoi)	486
Quality of road infrastructure. 1-7 (best) (wef_qroad)	487
Water. 0-100 (best) (wef_wi)	490
Population using at least basic drinking water services (%), Total (who_dwtot)	501

Total population using basic sanitation services (%) (who_sanittot)

506

2.6 Environment

Threatened Species: Amphibians (bi_amphibians)	75
Threatened Species: Birds (bi_birds)	75
Threatened Species: Chromists (bi_chromists)	76
Threatened Species: Fishes (bi_fishes)	76
Threatened Species: Fungi (bi_fungi)	76
Threatened Species: Mammals (bi_mammals)	76
Threatened Species: Molluscs (bi_molluscs)	77
Threatened Species: Other Inverts (bi_othinverts)	77
Threatened Species: Plants (bi_plants)	77
Threatened Species: Reptiles (bi_reptiles)	77
Threatened Species: Total (bi_total)	78
Built-up land footprint- Ecological Footprint of Consumption (GHA per person) (ef_bul)	143
Carbon footprint - Ecological Footprint of Consumption (GHA per person) (ef_carb)	143
Cropland footprint - Ecological Footprint of Consumption (GHA per person) (ef_crop)	144
Total Ecological Footprint of Consumption (GHA per person) (ef_ef)	144
Fish footprint - Ecological Footprint of Consumption (GHA per person) (ef_fg)	144
Forest product footprint - Ecological Footprint of Consumption (GHA per person) (ef_for)	145
Grazing footprint - Ecological Footprint of Consumption (GHA per person) (ef_gl)	145
Agriculture (0-100) (epi_agr)	149

Ecosystem Vitality (0-100) (epi_ev)	152
Sanitation and Drinking Water (0-100) (epi_h2o)	152
Heavy Metals (0-100) (epi_hmt)	153
Waste Management (0-100) (epi_wmg)	153
Water Resources (0-100) (epi_wrs)	153
Agricultural land (% of Land area) (fao_luagr)	157
Arable Land (% of Agricultural land) (fao_luagrara)	157
Cropland (% of Agricultural land) (fao_luagrcrop)	158
Land area equipped for irrigation (% of Agricultural land) (fao_luagirreq)	158
Land area equipped for irrigation (% of Cropland) (fao_luagirreqcrop)	158
Agriculture area under organic agric. (% of Agricultural land) (fao_luagrorg)	158
Land under perm meadows and pastures (% of Agricultural land) (fao_luagrpas)	158
Land under Permanent Crops (% of Agricultural land) (fao_luagrpcrop)	159
Cropland (% of Land area) (fao_lucrop)	159
Forest land (% of Land area) (fao_luforest)	159
Planted Forest (% of Forest area) (fao_luforplant)	159
Other naturally regenerated forest (% of Forest area) (fao_luforreg)	160
Land under perm meadows and pastures (% of Land area) (fao_lupas)	160
Expenditure on environment protection, as % of total gen. gov. exp. (gfs_envr)	185
The Region of the Country (ht_region)	214
Latitude (lp_lat_abst)	272
Natural Resource Protection Indicator (nrmi_nrpi)	281
Percentage of desert in 2012 (nunn_desert)	282
Average distance to nearest ice-free coast (1000 km) in 2012 (nunn_dist_coast)	282
Percentage within 100 km of ice-free coast in 2012 (nunn_near_coast)	283
Ruggedness (Terrain Ruggedness Index, 100 m) in 2012 (nunn_rugged)	283
Percentage of tropical climate in 2012 (nunn_tropical)	283
CO2 emissions from fuel combustion (oecd_airqty_t1)	285
Structure of central gov. expenditures, environmental protect. (oecd_gengovdistri_t1e)	295
Greenhouse gas emissions (oecd_greenhouse_t1)	300

Sulphur Oxides Emmissions (oecd_soxnox_t1a)	314
Nitrogene Oxides Emmissions (oecd_soxnox_t1b)	314
Total amount generated of municipal waste (oecd_waste_t1b)	320
The Ocean Health Index (ohi_ohi)	323
Sustainable Policies: Environmental Policies - Overall (sgi_en)	355
Sustainable Policies: Environmental Policies - Environment (sgi_enen)	355
Sustainable Policies: Environmental Policies - Global Environmental Protection (sgi_enge)	356
Arable land (% of land area) (wdi_araland)	411
Land area (sq. km) (wdi_area)	411
CO2 emissions (metric tons per capita) (wdi_co2)	414
Forest area (% of land area) (wdi_forest)	431
Fossil fuel energy consumption (% of total) (wdi_fossil)	432
Internally displaced persons, new displacement-disasters (number) (wdi_idpdis)	443
Average precipitation in depth (mm per year) (wdi_precip)	465
Confidence: The Environmental Protection Movement (wvs_confenv)	511

2.7 Gender Equality

Comparative Abortion Index 1 (0 to 7) (cai_cai1)	97
Comparative Abortion Index 2 (0 to 1) (cai_cai2)	98
Foetal impairment is accepted as grounds for legal abortion (cai_foetal)	98
Threat to mother's life is accepted as grounds for legal abortion (cai_life)	98
Threat to mother's mental health is accepted as grounds for legal abortion (cai_mental)	99
Threat to mother's physical health is accepted as grounds for legal abortion (cai_physical)	99
Pregnancy as result of rape or incest is accepted as grounds for legal abortion (cai_rape)	99
Abortion is available on request (cai_request)	99
Social or economic reasons are accepted as grounds for legal abortion (cai_social)	100
Duty of the People is to Build Country in Constitution (ccp_buildsoc)	106
Corruption Commission Present in Constitution (ccp_cc)	106
Limits on Child Work in Constitution (ccp_childwrk)	107
Meritocratic Recruitment of Civil Servants Mentioned in Constitution (ccp_civil)	107
Reference in Constitution to Democracy (ccp_democ)	107
Equality Before the Law Mentioned in Constitution (ccp_equal)	108
Freedom of Religion in Constitution (ccp_freerel)	108
Human Rights Commission Present in Constitution (ccp_hr)	108
Right to Government Documents in Constitution (ccp_infoacc)	109
Legislative Initiative Allowed (ccp_initiat)	109
Reference in Constitution to Capitalism (ccp_market)	109
Right to Marry in Constitution (ccp_marriage)	109

Unemployment, youth female (% of female labor force 15-24) (modeled ILO) (wdi_unempyfilo)	474
Unemployment, youth female (% of female labor force 15-24) (nation est.) (wdi_unempyfne)	475
Unemployment, youth total (% of total labor force 15-24) (modeled ILO) (wdi_unempyilo)	475
Unemployment, youth male (% of male labor force 15-24) (modeled ILO) (wdi_unempymilo)	475
Unemployment, youth male (% of male labor force 15-24) (national est.) (wdi_unempymne)	475
Unemployment, youth total (% of total labor force 15-24) (national est.) (wdi_unempyne)	476
Active labour market policies. 1-7 (best) (wef_alp)	477
Ease of finding skilled employees. 1-7 (best) (wef_efs)	480
Ease of hiring foreign labour. 1-7 (best) (wef_hfl)	482
Hiring and firing practices. 1-7 (best) (wef_hfp)	483
Cooperation in labour-employer relations. 1-7 (best) (wef_ler)	484
Flexibility of wage determination. 1-7 (best) (wef_wbp)	490
Ratio of wage and salaried female workers to male workers (wef_wlf)	490

Workers' rights. 1-100 (best) (wef_wr)
Confidence: Labour Unions (wvs_conflu)

490
512

2.12 Media

E-Government Index (egov_egov)	146
E-Participation Index (egov_epar)	147
Human Capital Index (egov_hci)	147
Online Service Index (egov_osi)	147
Telecommunication Infrastructure Index (egov_tii)	148
Freedom of Expression and Belief (fh_feb)	164
Economic Influences over Media Content (2001-2016) (fhp_mcei5)	168
Laws and Regulations that Influence Media Content (2001-2016) (fhp_mclr5)	168
Political Pressures and Controls on Media Content (2001-2016) (fhp_mcpp5)	169
Freedom of the Press, Score (2001-2016) (fhp_score5)	169
Freedom of the Press, Status (2001-2016) (fhp_status5)	169
Media Bias before Election (nelda_mbbe)	275
Press Freedom Index (rsf_pfi)	349
Robust Democracy: Access to Information (sgi_qdai)	358
Media corrupt (vdem_mecorrpt)	399
Confidence: The Press (wvs_confpr)	513

2.13 Migration

Freedom of Domestic Movement (ciri_dommov)	116
Freedom of Foreign Movement (ciri_formov)	117
Displaced people (1-5 Higher displacement) (gpi_dic)	202
Foreign-born population (oecd_migforpop_t1a)	308
Foreign population (oecd_migforpop_t1b)	309
Inward Remittances Flow, current (nominal) US dollar million (rd_inw)	344
Outward Remittances Flow, current (nominal) US dollar million (rd_outw)	344
Internally displaced persons, new displacement-disasters (number) (wdi_idpdis)	443
International migrant stock (% of population) (wdi_imig)	444
Net migration (wdi_migration)	455
Refugee population by country or territory of asylum (wdi_refasy)	466
Refugee population by country or territory of origin (wdi_refori)	466

2.14 Political Parties and Elections

No. of coups (br_coup)	93
Is the country in the Commonwealth (br_cw)	93
Whether an election was postponed (br_elecpost)	93
Typology of political institutions (br_elect)	94
Whether an election was held during the year (br_elecyear)	94
No. of failed coups (br_fcoup)	94
Is the country a monarchy (br_mon)	94
Is the political system presidential (br_pres)	95
Does the country have proportional voting (br_pvot)	95
Did the main regime change (br_regch)	95
No. of successful coups (br_scoup)	95
Full suffrage (br_suff)	96
Contestation (standardized version) (cam_contest)	101
Inclusiveness (standardized version) (cam_inclusive)	101
Electoral Self-Determination (ciri_elecsd)	116
Number of changes in government per year (cpds_chg)	122
Effective number of parties on the seats level (cpds_enps)	122
Effective number of parties on the votes level (cpds_enpv)	123
Electoral fractionalization of the party system (Rae index) (cpds_frel)	123
Legislative fractionalization of the party system (Rae index) (cpds_frleg)	123
Cabinet composition (Schmidt index) (cpds_govlr)	123
Government support (seat share of all parties in government) (cpds_govsup)	124
Share of seats in parliament: agrarian (cpds_la)	124
Share of seats in parliament: electoral alliance (cpds_lall)	124
Share of seats in parliament: communist (cpds_lcom)	124
Share of seats in parliament: conservative (cpds_lcon)	125
Share of seats in parliament: ethnic (cpds_le)	125
Share of seats in parliament: feminist (cpds_lfe)	125
Share of seats in parliament: green (cpds_lg)	125
Share of seats in parliament: liberal (cpds_ll)	126
Share of seats in parliament: left-socialist (cpds_lls)	126
Share of seats in parliament: monarchist (cpds_lmo)	126
Share of seats in parliament: non-labelled (cpds_lnl)	126
Share of seats in parliament: other (cpds_lo)	127
Share of seats in parliament: protest (cpds_lp)	127
Share of seats in parliament: post-communist (cpds_lpc)	127
Share of seats in parliament: pensioners (cpds_lpen)	127
Share of seats in parliament: personalist (cpds_lper)	128
Share of seats in parliament: right (cpds_lr)	128
Share of seats in parliament: regionalist (cpds_lreg)	128
Share of seats in parliament: religious (cpds_lrel)	128
Share of seats in parliament: social democratic (cpds_ls)	129
Type of Government (cpds_tg)	129
Share of votes: agrarian (cpds_va)	129
Share of votes: electoral alliance (cpds_vall)	130
Share of votes: communist (cpds_vcom)	130
Share of votes: conservative (cpds_vcon)	130
Share of votes: ethnic (cpds_ve)	130
Share of votes: feminist (cpds_vfe)	131
Share of votes: green (cpds_vg)	131
Share of votes: liberal (cpds_vl)	131
Share of votes: left-socialist (cpds_vls)	131
Share of votes: monarchist (cpds_vmo)	132
Share of votes: non-labelled (cpds_vnl)	132
Share of votes: other (cpds_vo)	132
Share of votes: protest (cpds_vp)	132

Share of votes: post-communist (cpds_vpcom)	133
Share of votes: pensioners (cpds_vpen)	133
Share of votes: personalist (cpds_vper)	133
Share of votes: right (cpds_vr)	133
Share of votes: regionalist (cpds_vreg)	134
Share of votes: religious (cpds_vrel)	134
Share of votes: social democratic (cpds_vs)	134
Voter turnout in election (cpds_vt)	134
Electoral Volatility - Parties above 1% (2nd election in year) (dev_altv2)	137
Electoral Volatility - Parties below 1% (2nd election in year) (dev_othv2)	137
Electoral Volatility - Parties entering/exiting party system (2nd election in ye (dev_regv2)	138
Electoral Volatility - Total (2nd election in year) (dev_tv2)	138
Electoral Process (fh_ep)	164
Average District Magnitude (gol_adm)	194
Districts (gol_dist)	194
Effective Number of Electoral Parties (gol_enep)	195
Effective Number of Electoral Parties 1 (gol_enep1)	195
Effective Number of Electoral Parties (Others) (gol_enepo)	195
Effective Number of Parliamentary or Legislative Parties (gol_enpp)	195
Effective Number of Parliamentary or Legislative Parties 1 (gol_enpp1)	196
Effective Number of Parliamentary or Legislative Parties (Others) (gol_enppo)	196

3 Identification Variables

3.0.1 ccode Country Code

Numeric country code based on the ISO-3166-1 standard. All the numeric country codes are unique and this is thus the variable best suitable to use when merging files (in combination with year for time-series data). (http://en.wikipedia.org/wiki/ISO_3166-1_numeric)

3.0.2 ccode_qog Country Code QoG

The country code using the QoG standard.

3.0.3 ccodealp 3-letter Country Code

A three-letter country code based on the ISO-3166-1 alpha3 standard. Please note that the ccodealp variable does not uniquely identify all countries.

3.0.4 ccodealp_year 3-letter Country Code and Year

A three-letter country code and year.

3.0.5 ccodecow Country Code COW

Country code from the Correlates of War.

3.0.6 ccodewb Country Code ISO

Country code from the World Bank.

3.0.7 cname Country Name

The name of the country based in the ISO standard.

3.0.8 cname_qog Country Name QoG

The name of the country using the QoG standard.

3.0.9 cname_year Country Name and Year

Country name and year.

3.0.10 version Version of the Dataset

Version of the QoG dataset.

4 Description of Variables by Original Data Sources

4.1 AidData

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Tierney, M. J., Nielson, D. L., Hawkins, D. G., Roberts, J. T., Findley, M. G., Powers, R. M., Parks, B., Wilson, S. E., & Hicks, R. L. (2011). More dollars than sense: Refining our knowledge of development finance using aiddata. *World Development*, 39(11), 1891–1906

AidData v. 3.1

AidData's Core Research Release 3.1 is a corrected snapshot of AidData's entire project-level database from April 2016. This database includes commitment information for over 1.5 million development finance activities funded between 1947 and 2013, covers 96 donors, and includes ODA, OOF flows, Equity Investments, and Export Credits where available.

4.1.1 Number of Recipients to whom Commitments were provided (not incl. Int. Org.) (aid_cpnc)

Number of Recipients to whom Commitments were provided, not including International Organizations

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1973 Max. Year: 2013
N: 34 n: 859 \bar{N} : 21 \bar{T} : 25

4.1.2 Sum of Commitments provided to Recipients (not incl. Int. Org.) (aid_cpsc)

Sum of Commitments provided to Recipients, not including International Organizations

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1973 Max. Year: 2013
N: 34 n: 859 \bar{N} : 21 \bar{T} : 25

4.1.3 Number of Donors from whom Commitments were received (not incl. Int. Org.) (aid_crnc)

Number of Donors from whom Commitments were received, not including International Organizations

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1973 Max. Year: 2013
N: 35 n: 411 \bar{N} : 10 \bar{T} : 12

4.1.4 Number of Int. Org. from whom Commitments were received (aid_crnio)

Number of International Organizations from whom Commitments were received

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2013
N: 34 n: 569 \bar{N} : 8 \bar{T} : 17

4.1.5 Sum of Commitments received from Donors (not incl. Int. Org.) (aid_crsc)

Sum of Commitments received from Donors, not including International Organizations

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1973 Max. Year: 2013
N: 35 n: 411 \bar{N} : 10 \bar{T} : 12

4.1.6 Sum of Commitments received from Int. Org. (aid_crσιο)

Sum of Commitments received from International Organizations

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1947 Max. Year: 2013
N: 34 n: 569 \bar{N} : 8 \bar{T} : 17

4.2 Alesina, Devleeschauwer, Easterly, Kurlat and Wacziarg

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Alesina, A., Devleeschauwer, A., Easterly, W., Kurlat, S., & Wacziarg, R. (2003). Fractionalization [O. Galor (ed.) (2011), *Inequality and Economic Development: The Modern Perspective*, Edward Elgar, UK.]. *Journal of Economic Growth*, 8(2), 155–194

http://www.anderson.ucla.edu/faculty_pages/romain.wacziarg/papersum.html
(Data downloaded: 2021-10-13)

Fractionalization

The variables reflect the probability that two randomly selected people from a given country will not share a certain characteristic, the higher the number the less probability of the two sharing that characteristic. The data was last updated by the authors in 2003. For the QoG Data, the data from the year 2000 is repeated throughout the other years, then, these variables should be taken as historical variables.

4.2.1 Ethnic Fractionalization in the year 2000 (al_ethnic2000)

Ethnic Fractionalization in the year 2000. The definition of ethnicity involves a combination of racial and linguistic characteristics. The result is a higher degree of fractionalization than the commonly used ELF-index (see el_elf60) in for example Latin America, where people of many races speak the same language.

Min. Year:2016 Max. Year: 2016
N: 36

Min. Year:1946 Max. Year: 2016
N: 36 n: 2556 \bar{N} : 36 \bar{T} : 71

4.2.2 Language Fractionalization in the year 2000 (al_language2000)

Linguistic Fractionalization in the year 2000. Reflects probability that two randomly selected people from a given country will not belong to the same linguistic group. The higher the number, the more fractionalized society.

Min. Year:2016 Max. Year: 2016
N: 36

Min. Year:1946 Max. Year: 2016
N: 36 n: 2556 \bar{N} : 36 \bar{T} : 71

4.2.3 Religion Fractionalization in the year 2000 (al_religion2000)

Religious Fractionalization in the year 2000. Reflects probability that two randomly selected people from a given country will not belong to the same religious group. The higher the number, the more fractionalized society.

Min. Year:2016 Max. Year: 2016
N: 36

Min. Year:1946 Max. Year: 2016
N: 36 n: 2556 \bar{N} : 36 \bar{T} : 71

4.3 The Association of Religion Data Archives

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Maoz, Z., & Henderson, E. A. (2013). The world religion dataset, 1945-2010: Logic, estimates, and trends. *International Interactions*, 39(3)

(Data downloaded: 2021-11-09)

World Religion Project: National Religion Dataset

The World Religion Dataset (WRD) aims to provide detailed information about religious adherence worldwide since 1945. It contains data about the number of adherents by religion in each of the states in the international system. These numbers are given for every half-decade period (1945, 1950, etc., through 2010). Percentages of the states' populations that practice a given religion are also provided. (Note: These percentages are expressed as decimals, ranging from 0 to 1, where 0 indicates that 0 percent of the population practices a given religion and 1 indicates that 100 percent of the population practices that religion). Some of the religions are divided into religious families. To the extent data are available, the breakdown of adherents within a given religion into religious families is also provided.

The project was developed in three stages. The first stage consisted of the formation of a religion tree. A religion tree is a systematic classification of major religions and of religious families within those major religions. To develop the religion tree a comprehensive literature review was prepared, the aim of which was (i) to define a religion, (ii) to find tangible indicators of a given religion or religious families within a major religion, and (iii) to identify existing efforts at classifying world religions. (Please see the original survey instrument to view the structure of the religion tree). The second stage consisted of the identification of major data sources of religious adherence and the collection of data from these sources according to the religion tree classification. This created a dataset that included multiple records for some states for a given point in time. It also contained multiple missing data for specific states, specific time periods and specific religions. The third stage consisted of cleaning the data, reconciling discrepancies of information from different sources and imputing data for the missing cases.

The National Religion Dataset: The observation in this dataset is a state-five-year unit. This dataset provides information regarding the number of adherents by religions, as well as the percentage of the state's population practicing a given religion.

4.3.1 Animist religions: Total (% Adherents) (arda_angenpct)

Animist religions: Total (% Adherents).

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1950 Max. Year: 2010
N: 38 n: 411 \bar{N} : 7 \bar{T} : 11

4.3.2 Baha'i: Total (% Adherents) (arda_bagenpct)

Baha'i: Total (% Adherents).

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1950 Max. Year: 2010
N: 38 n: 411 \bar{N} : 7 \bar{T} : 11

4.3.3 Buddhism: Total (% Adherents) (arda_bugenpct)

Buddhism: Total (% Adherents).

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1950 Max. Year: 2010
N: 38 n: 411 \bar{N} : 7 \bar{T} : 11

4.3.4 Buddhism: Mahayana (% Adherents) (arda_bumahpct)

Buddhism: Mahayana (% Adherents).

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1950 Max. Year: 2010
N: 38 n: 411 \bar{N} : 7 \bar{T} : 11

The Bayesian Corruption Index

The Bayesian Corruption Index is a composite index of the perceived overall level of corruption: with corruption referred to as the “abuse of public power for private gain”. Perceived corruption: Given the hidden nature of corruption, direct measures are hard to come by, or inherently flawed (e.g. the number of corruption convictions). Instead, we amalgamate the opinion on the level of corruption from inhabitants of the country, companies operating there, NGOs, and officials working both in governmental and supra-governmental organizations. Composite: it combines the information of 20 different surveys and more than 80 different survey questions that cover the perceived level of corruption.

It is an alternative to the other well-known indicators of corruption perception: the Corruption Perception Index (CPI) published by Transparency International and the Worldwide Governance Indicators (WGI) published by the World Bank. Methodologically, it is most closely related to the latter as the methodology used in the construction of the BCI can be seen as an augmented version of the Worldwide Governance Indicators’ methodology.

The augmentation allows an increase of the coverage of the BCI: a 60% to 100% increase relative to the WGI and CPI, respectively. In addition, in contrast to the WGI or CPI, the underlying source data are entered without any ex-ante imputations, averaging or other manipulations. This results in an index that truly represents the underlying data, unbiased by any modeling choices of the composer.

4.5.1 The Bayesian Corruption Indicator (bci_bci)

The BCI index values lie between 0 and 100, with an increase in the index corresponding to a raise in the level of corruption. This is a first difference with CPI and WGI where an increase means that the level of corruption has decreased.

There exists no objective scale on which to measure the perception of corruption and the exact scaling you use is to a large extent arbitrary. However, the authors were able to give the index an absolute scale: zero corresponds to a situation where all surveys say that there is absolutely no corruption. On the other hand, when the index is one, all surveys say that corruption is as bad as it gets according to their scale. This is another difference with CPI and WGI, where the scaling is relative. They are rescaled such that WGI has mean 0 and a standard deviation of 1 in each year, while CPI always lies between 0 and 100.

In contrast, the actual range of values of the BCI will change in each year, depending how close countries come to the situation where everyone agrees there is no corruption at all (0), or that corruption is as bad as it can get (100).

The absolute scale of the BCI index was obtained by rescaling all the individual survey data such that

zero corresponds to the lowest possible level of corruption and 1 to the highest one. We subsequently rescaled the BCI index such that when all underlying indicators are zero (one), the expected value of the BCI index is zero (hundred).

4.6 The International Union for Conservation of Nature's Red List of Threatened Species

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

International Union for Conservation of Nature and Natural Resources. (2021). The IUCN Red List of Threatened Species. Version 2021-3. <http://www.iucnredlist.org>

<https://www.iucnredlist.org/resources/summary-statistics>
(Data downloaded: 2021-12-09)

IUCN Red List of Threatened Species (version 2021-3)

The IUCN Red List of Threatened Species is widely recognized as the most comprehensive, objective global approach for evaluating the conservation status of plant and animal species. From its small beginning, The IUCN Red List has grown in size and complexity and now plays an increasingly prominent role in guiding conservation activities of governments, NGOs and scientific institutions. The introduction in 1994 of a scientifically rigorous approach to determine risks of extinction that is applicable to all species, has become a world standard.

Note: For reptiles, fishes, molluscs, other invertebrates, plants, fungi & protists: there are still many species that have not yet been assessed for the IUCN Red List and therefore their status is not known (i.e., these groups have not yet been completely assessed). Therefore the figures presented below for these groups should be interpreted as the number of species known to be threatened within those species that have been assessed to date, and not as the overall total number of threatened species for each group.

We advise users to abstain from making comparisons through time using this data, given that there could be changes to the methodology for the country reports.

<http://gmi.bicc.de/>
(Data downloaded: 2021-10-07)

Global Militarization Index

Compiled by BICC, the Global Militarization Index (GMI) presents on an annual basis the relative weight and importance of a country's military apparatus in relation to its society as a whole. The GMI covers 151 states and is based on the latest available figures (up to 2019). The index project is financially supported by Germany's Federal Ministry for Economic Cooperation and Development.

4.7.1 Global Militarization Index (bicc_gmi)

The Global Militarization Index is divided into three overarching categories: expenditure, personnel and heavy weapons. (See variables `bicc_milexp`, `bicc_milper`, and `bicc_hw`).

In order to increase the compatibility between different indicators and preventing extreme values from crating distortions when normalizing data, in a first step every indicator was represented in a logarithm with the factor 10. Second, all data was normalized using the formula $x=(y-\min)/(\max-\min)$, with min and max representing, respectively, the lowest and the highest value of the logarithm. In a third step, every indicator was weighted in accordance to a subjective factor, reflecting the relative importance attributed to it by BICC researchers. In order to calculate the final score, the weighted indicators were added together and then normalized one last time on a scale ranging from 0 to 1,000. For better comparison of individual years, all years were finally normalized.

Weighting Factors used:

- Military expenditures as percentage of GDP - 5
- Military expenditures in relation to health spending - 3
- Military and paramilitary personnel in relation to population - 4
- Military reservers in relation to population - 2
- Military and paramilitary personnel in relation to physicians - 2
- Heavy weapons in relation to population - 4

Min. Year:2016 **Max. Year:** 2018
N: 36

Min. Year:1990 **Max. Year:** 2019
N: 37 **n:** 1063 **\bar{N} :** 35 **\bar{T} :** 29

4.7.2 Heavy Weapons Index (bicc_hw)

The GMI takes into consideration the number of an armed forces' heavy weapons in relation to the total population. Heavy weapons are defined here as any piece of military equipment which fits into either one of four categories: armored vehicles (armored personnel carriers, light tanks, main battle tanks), artillery (multiple rocket launchers, self-propelled artillery, towed artillery) above 100mm caliber, combat aircraft (attack helicopters, fixed-wing fighter aircraft), and major fighting ships (submarines, major surface combatants above corvette size).

Data on weapons holdings was collected by BICC from different sources, mainly the Military Balance from ISS. Data on small arms and light weapons (SALW) is not only extremely difficult to obtain but also unreliable and was thus not included in the GMI.

Min. Year:2016 Max. Year: 2018
N: 36

Min. Year:1990 Max. Year: 2019
N: 37 n: 1063 \bar{N} : 35 \bar{T} : 29

4.7.3 Military Expenditure Index (bicc_milexp)

Military spending in relation to GDP and health spending are the most important indicators for determining the level of militarization. Financial resources which are made available via the military budget by a government are an important factor which affects capacities and size of a state's armed forces. The other indicator the GMI uses is the comparison between the total military budget and government spending on health services.

Figures for military expenditure are compiled from the data base of the Stockholm Peace Research Institute SIPRI. Even though SIPRI may currently be regarded as the most reliable source, data on military expenditure has to be treated with extreme caution. For many countries, especially in the developing world and autocratic states, the figures are but rough estimates. In cases where SIPRI does not provide any up-to-date information, we adopted the latest available figures provided they were no older than three years.

Data on gross domestic product was taken from the International Monetary Fund. Data on health expenditure used have been extracted from the data base of the World Health Organization.

Min. Year:2016 Max. Year: 2018
N: 36

Min. Year:1990 Max. Year: 2019
N: 37 n: 1063 \bar{N} : 35 \bar{T} : 29

4.7.4 Military Personnel Index (bicc_milper)

The level of militarization is also represented by the relation of military personnel to the total population and physicians. The first and most important indicator in this category is the active (para)military personnel to the total population. Paramilitary personnel were included here, since in many countries the regular military alone does not adequately reflect the total size of the armed forces.

The main criterion for coding an organizational entity as either military or paramilitary is that

the forces in question are under the direct control of the government in addition to being armed, uniformed and garrisoned.

For a comprehensive presentation of the available personnel and an adequate representation of the relative level of militarization, a second indicator in this category takes into account the percentage of reserve forces in the total population. This factor is relevant for some countries, such as Switzerland that have a comparably small standing army but a more substantial amount of available reserves within society. The third indicator compares the total amount of military and paramilitary forces with the number of physicians in a country in order to express the relation between military and non-military expertise in a society.

All data on military personnel was compiled from the Military Balance, the yearbook published by the Institute for Strategic and International Studies (IISS). Population size figures were taken from the Vital Statistics Report of the United Nations; data on the number of physicians from the World Health Organization.

Religion and State Project

The Religion and State (RAS) project is a university-based project located at Bar Ilan University in Ramat Gan, Israel. Its goal is to create a set of measures that systematically gauge the intersection between government and religion. Specifically, it examines government religion policy. The project's goals are threefold:

- To provide an accurate description of government religion policies worldwide.
- To create a tool which will lead to greater understanding of the factors which influence government religion policy.
- To provide the means to examine how government religion policy influences other political, social, and economic factors as well as how those factors influence government religion policy.

Round 2 of the RAS dataset, which is currently the official version available for download, measures the extent of government involvement in religion (GIR) or the lack thereof for 175 states on a yearly basis between 1990 and 2014. This constitutes all countries with populations of 250,000 or more as well as a sampling of smaller states. The data includes the following information:

Official Religion: A 15 value variable which measures the official relationship between religion and the state. This includes five categories of official religions and nine categories of state-religion relationships which range from unofficial support for a single religion to overt hostility to all religion.

Religious Support: This includes 51 separate variables which measure different ways a government can support religion including financial support, policies which enforce religious laws, and other forms of entanglement between government and religion.

Religious Restrictions: This includes 29 separate variables which measure different ways governments regulate, restrict, or control all religions in the state including the majority religion. This includes restrictions on religion's political role, restrictions on religious institutions, restrictions on religious practices, and other forms of regulation, control, and restrictions.

Religious Discrimination: This includes 30 types of restrictions that are placed on the religious institutions and practices of religious minorities that are not placed on the majority group. This includes restrictions on religious practices, restrictions on religious institutions and clergy, restrictions on conversion and proselytizing, and other restrictions.

The dataset also includes several sets of detailed variables measuring certain policies in depth. These topics include religious education, the registration of religious organizations, restrictions on abortion, restrictions on proselytizing, and religious requirements for holding public office or citizenship.

4.8.1 Official Religion (biu_offrel)

Official Religion measures whether the government has an established religion. For a religion to be established there must be a constitutional clause, a law, or the equivalent explicitly stating that a specific religion or specific religions are the official religions of that state. This variable is coded on the following scale:

- 0. The State has no official religion
- 1. The state has multiple established religions
- 2. The state has one established religion

4.9 Barro and Lee

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Barro, R. J., & Lee, J. W. (2013). A new data set of educational attainment in the world, 1950–2010. *Journal of Development Economics*, 104, 184–198

<http://www.barrolee.com/>
(Data downloaded: 2021-10-04)

Educational Attainment Dataset

The Barro-Lee Data set provide data disaggregated by sex and by 5-year age intervals. It provides educational attainment data for 146 countries in 5-year intervals from 1950 to 2010. It also provides information about the distribution of educational attainment of the adult population over age 15 and over age 25 by sex at seven levels of schooling - no formal education, incomplete primary, complete primary, lower secondary, upper secondary, incomplete tertiary, and complete tertiary. Average years of schooling at all levels - primary, secondary, and tertiary - are also measured for each country and for regions in the world.

This is the latest updated version of the Barro-Lee dataset reported in Barro and Lee (2013). Dr. Hanol Lee, an associate professor at Southwestern University of Finance and Economics, has collaborated on the project.

The main aim of this new version is to construct estimates of educational attainment for the population between 15 and 64 years old for the year of 2015. The estimates are disaggregated by gender and by 10-year age group, whereas those in the original dataset were disaggregated by 5-year age group. This is due to the limited availability of disaggregated statistics in the newly compiled census/survey data.

Boix-Miller-Rosato Dichotomous Coding of Democracy, 1800-2020

This data set provides a dichotomous coding of democracy from 1800 until 2020, however QoG data contains information from 1946 onwards. Authors define a country as democratic if it satisfies conditions for both contestation and participation. Specifically, democracies feature political leaders chosen through free and fair elections and satisfy a threshold value of suffrage.

4.10.1 Dichotomous democracy measure (bmr_dem)

Dichotomous democracy measure.

Min. Year: 2018 Max. Year: 2018
N: 36

Event History Coding of Democratic Breakdowns

Binary coding of all democracies from 1913 until 2005 prepared for use in event history analysis.

4.11.1 Democratic Breakdown (bnr_dem)

The variable is a binary coding of all democracies from 1913 until 2005 (included in the QoG dataset are only the years 1946-2005) prepared for use in event history analysis. Countries that meet the minimum conditions for democracy (see below) enter the dataset and are coded “0”. When countries cease to meet those minimum criteria they are coded “1” and exit from the dataset. If, after a democratic breakdown, a country again meets our minimum criteria it re-enters the data as a new democratic episode. The time frame onset in 1913 is a function of when the first country (Norway) meets the minimum conditions. All series terminate in either in a breakdown in various years or right censorship in 2005. The minimal conditions are based on Dahl’s notion of polyarchy (competitiveness, inclusiveness) combined with Linz and Stepan’s stateness criteria.

Competitiveness: Countries that hold elections for both the executive and legislature, and in which more than one party contests the elections, are included. However, we exclude cases in which we detected outcome changing vote fraud, in which there was either extensive or extreme violence that inhibited voters’ preference expression, or in which political parties representing a substantial portion of the population were banned.

Inclusiveness: We only include competitive polities in which at least fifty percent of all adult citizens are enfranchised to vote in our set of democracies.

Stateness: We also considered questions of sovereignty, not including colonial states, where founding elections were held prior to the granting of independence, and countries experiencing internal wars in which twenty percent or greater of the population or territory was out of control of the state.

(Data downloaded: 2020-09-04)

The Comparative Abortion Index Project

The comparative abortion index quantifies the permissiveness of abortion policies worldwide, accounting for a variety of considerations. It aims to provide researchers with a tool to assess trends in worldwide reproductive rights, and to study how these changes over time and space occur. It is unique in its breadth and its method. Not only does it include a scale that reflects the number of criteria accepted as grounds for abortion, but it includes a second scale which gives weighted scores to each criterion, based on how common it is. These data are relevant for anyone interested in tracking trends in women's rights, public health policy, and reproductive rights policy over time.

The dataset covers 192 countries from 1992-2015. The UN Department of Social and Economic Affairs has published a global review of abortion policy since 1992. For this database, all reviews published between 1992 and 2015 were collected. The report offers seven criteria under which state law may allow access to abortion services; saving a woman's life, preserving a woman's physical health, preserving a woman's mental health, in case of rape or incest, in case of fetal impairment, for social or economic reasons and on request.

Each country-year is given a score based on the number of legal criteria accepted as grounds for abortion. In the first version of the index (CAI1), each criterion is given equal weight and the score is a direct reflection of the number of conditions the country accepts. Thus, a country that has no conditions under which a woman can receive an abortion gets a score of 0. A country, in which a woman may access an abortion under all conditions including on request, receives a score of 7.

For the purposes of robustness, and to fix a potential measurement flaw in the first index, we also offer a weighted index (CAI2). The first scale does not account for the different degrees of acceptance that each criterion represents. It would be imprecise, for instance, to suggest that the criterion of saving a woman's life is equivalent to (and thus carries the same weight as) allowing abortion on demand. The more permissive the criterion, the less likely that it is universally accepted. Accordingly, the weight of each criterion (W_i) will be determined based on the percentage (P_i) of countries that allow that condition. In the weighted index, countries are given a score on a scale of 0 to 1, where 0 represents countries in which there are no conditions for legal abortion, and 1 represents a country that accepts all criteria for abortion, including on request.

4.13.1 Comparative Abortion Index 1 (0 to 7) (cai_cai1)

The scale quantifies grounds on which a country might grant legal access to abortion: saving a woman's life, preserving a woman's physical health, preserving a woman's mental health, in case of rape or incest, in case of fetal impairment, for social or economic reasons, and on request. 0 represents a country with a complete ban on abortions. 7 represents a country that allows abortions on request.

Min. Year:1992 Max. Year: 2015
N: 36 n: 862 \bar{N} : 36 \bar{T} : 24

4.13.2 Comparative Abortion Index 2 (0 to 1) (cai_cai2)

Using the 7 grounds for legal abortion, the weight of each grounds (W_i) will be determined based on the percentage (P_i) of countries that allow it. In the weighted index, countries are given a score on a scale of 0-1, where 0 represents countries in which there are no conditions for legal abortion, and 1 represents a country that accepts all criteria for abortion, including on request. The need for a weighted scale is as follows: It would be imprecise, for instance, to suggest that the criterion of saving a woman's life is equivalent to (and thus carries the same weight as) allowing abortion on demand. The more permissive the criterion, the less likely that it is universally accepted. Thus, the scale accounts for the different degrees of acceptance that each criterion represents.

Contestation and Inclusiveness, 1950-2000

These are the two principal components of 13-15 indicators of democracy, including those compiled by Freedom House; Polity; Arthur Banks; Alvarez, Cheibub, Limongi, and Przeworski, as updated by Cheibub and Gandhi; Bollen; and Cingranelli and Richards. The dataset covers most countries in the world from 1950 through 2000. In an article in the *Journal of Politics* (July 2008), the authors argue that these principal components, which capture 75 percent of variation in the most commonly used democracy indicators, measure Robert Dahl's two dimensions of polyarchy: contestation and inclusiveness.

Central Bank Independence Dataset

The Central Bank Independence Dataset is the most comprehensive data set on de jure central bank independence (CBI) available to date. The data set identifies statutory reforms affecting CBI, their direction, and the attributes necessary to build the Cukierman, Webb, and Neyapti (1992) (CWN) index in 190 countries between 1970 and 2012.

This data set codes the existence of reforms in 6,745 observations and computes the CWN index for 5,840 observations. The data coverage not only allows researchers to test competing explanations on the determinants and effects of CBI in both developed and developing countries, but it also provides a useful instrument for cross-national studies in diverse fields.

4.15.1 Central Bank Independence unweighted index (cbi_cbiu)

CBI unweighted index: Raw average of the four components: Chief Executive Officer, Objectives, Policy Formulation and Limitations on lending to the government. It ranges from 0 (minimum) to 1 (maximum) CBI.

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1970 Max. Year: 2012
N: 37 n: 1414 \bar{N} : 33 \bar{T} : 38

4.15.2 Central Bank Independence weighted index (cbi_cbiw)

CBI weighted index: Weighted average of the four components (weights between parentheses), following Cukierman, Webb and Neyapti's (1992) criteria: Chief Executive Officer (0.20), Objectives (0.15), Policy Formulation (0.15), and Limitations on lending to the government (0.5). It ranges from 0 (minimum) to 1 (maximum) CBI.

(Data downloaded: 2021-10-06)

Characteristics of National Constitutions

This dataset presents records of the characteristics of national constitutions written since 1789. Each constitutional text is coded twice by different coders working independently. To maximize the reliability of the final data, the discrepancies between these two codings are reconciled by a third individual - a reconciler. This is the second public release of data (version 2.0) on the content of constitutions. Authors rely on Ward and Gleditsch's list to identify which countries are independent in a given year. There are utilized two concepts to categorize constitutional texts. A constitutional system encompasses the period in which a constitution is in force before it is replaced or suspended. A constitutional event is any change to a country's constitution, including adoption, amendment, suspension, or reinstatement. For years in which there are multiple events, the constitution is coded as it stood in force at the end of the year. For example, if a constitution was amended the same year as it was adopted, the content of the constitution is coded as amended rather than as originally adopted. In addition, since events are (often) in force for multiple years, authors interpolated the data associated each event across all country-years in which that event was in force. Note that this is an extremely conservative interpolation strategy because most constitutional amendments do not change many provisions. As a result, for most variables, one can safely interpolate across constitutional systems.

4.16.1 Duty of the People is to Build Country in Constitution (ccp_buildsoc)

Does the constitution refer to a duty of the people to take part in building society or to work for the development of the country?

1. Yes
2. No
96. Other

Min. Year: 2015 Max. Year: 2018
N: 35

Min. Year: 1946 Max. Year: 2020
N: 37 n: 2201 \bar{N} : 29 \bar{T} : 59

4.16.2 Corruption Commission Present in Constitution (ccp_cc)

Does the constitution contain provisions for a counter corruption commission?

- 1. Yes
- 2. No
- 96. Other
- 97. Unable to determine

Min. Year:2015 Max. Year: 2018
N: 35

Min. Year:1946 Max. Year: 2020
N: 37 n: 2201 \bar{N} : 29 \bar{T} : 59

4.16.3 Limits on Child Work in Constitution (ccp_childwrk)

Does the constitution place limits on child employment?

- 1. Yes
- 2. No
- 90. Left explicitly to non-constitutional law
- 96. Other

Min. Year:2015 Max. Year: 2018
N: 35

Min. Year:1946 Max. Year: 2020
N: 37 n: 2201 \bar{N} : 29 \bar{T} : 59

4.16.4 Meritocratic Recruitment of Civil Servants Mentioned in Constitution (ccp_civil)

Does the constitution include provisions for the meritocratic recruitment of civil servants (e.g. exams or credential requirements)?

- 1. Yes
- 2. No
- 96. Other

Min. Year:2015 Max. Year: 2018
N: 35

Min. Year:1946 Max. Year: 2020
N: 37 n: 2201 \bar{N} : 29 \bar{T} : 59

4.16.5 Reference in Constitution to Democracy (ccp_democ)

Does the constitution refer to “democracy” or “democratic”?

- 1. Yes
- 2. No

Min. Year:2015 Max. Year: 2018
N: 35

Min. Year:1946 Max. Year: 2020
N: 37 n: 2201 \bar{N} : 29 \bar{T} : 59

4.16.6 Equality Before the Law Mentioned in Constitution (ccp_equal)

Does the constitution refer to equality before the law, the equal rights of men, or non-discrimination?

1. Yes
2. No
96. Other

Min. Year:2015 Max. Year: 2018
N: 35

Min. Year:1946 Max. Year: 2020
N: 37 n: 2201 \bar{N} : 29 \bar{T} : 59

4.16.7 Freedom of Religion in Constitution (ccp_freerel)

Does the constitution provide for freedom of religion?

1. Yes
2. No
96. Other

Min. Year:2015 Max. Year: 2018
N: 35

Min. Year:1946 Max. Year: 2020
N: 37 n: 2201 \bar{N} : 29 \bar{T} : 59

4.16.8 Human Rights Commission Present in Constitution (ccp_hr)

Does the constitution contain provisions for a human rights commission?

1. Yes
2. No
96. Other

Min. Year:2015 Max. Year: 2018
N: 35

Min. Year:1946 Max. Year: 2020
N: 37 n: 2201 \bar{N} : 29 \bar{T} : 59

4.16.9 Right to Government Documents in Constitution (ccp_infoacc)

Does the constitution provide for an individual right to view government files or documents under at least some conditions?

1. Yes
2. No
96. Other

Min. Year:2015 Max. Year: 2018
N: 35

Min. Year:1946 Max. Year: 2020
N: 37 n: 2201 \bar{N} : 29 \bar{T} : 59

4.16.10 Legislative Initiative Allowed (ccp_initiat)

Does the constitution provide for the ability of individuals to propose legislative initiatives?

1. Yes
2. No
96. Other

Min. Year:2015 Max. Year: 2018
N: 35

Min. Year:1946 Max. Year: 2020
N: 37 n: 2201 \bar{N} : 29 \bar{T} : 59

4.16.11 Reference in Constitution to Capitalism (ccp_market)

Does the constitution refer to the “free market,” “capitalism,” or an analogous term?

1. Yes
2. No
96. Other

Min. Year:2015 Max. Year: 2018
N: 35

Min. Year:1946 Max. Year: 2020
N: 37 n: 2201 \bar{N} : 29 \bar{T} : 59

4.16.12 Right to Marry in Constitution (ccp_marriage)

Does the constitution provide for the right to marry?

1. Yes, general provision

- 2. Yes, marriage allowed between a man and a woman
- 3. No
- 90. Left explicitly to non-constitution law
- 96. Other

Min. Year:2015 Max. Year: 2018
N: 35

Min. Year:1946 Max. Year: 2020
N: 37 n: 2201 \bar{N} : 29 \bar{T} : 59

4.16.13 Right to Same-Sex Marriages in Constitution (ccp_samesexm)

Does the constitution provide the right for same sex marriages?

- 1. Yes
- 2. No
- 96. Other

Min. Year:2015 Max. Year: 2018
N: 35

Min. Year:1946 Max. Year: 2020
N: 37 n: 2201 \bar{N} : 29 \bar{T} : 59

4.16.14 Status of Slavery in Constitution (ccp_slave)

Does the constitution prohibit slavery, servitude, or forced labor?

- 1. Universally prohibited
- 2. Prohibited except in the case of war
- 3. Prohibited with other exception(s)n
- 90. Left explicitly to non-constitutional law
- 96. Other
- 98. Not specified

Min. Year:2015 Max. Year: 2018
N: 35

Min. Year:1946 Max. Year: 2020
N: 37 n: 2201 \bar{N} : 29 \bar{T} : 59

4.16.15 Reference in Constitution to Socialism (ccp_socialsm)

Does the constitution refer to “socialism” or “socialist”?

- 1. Yes
- 2. No
- 96. Other

Min. Year:2015 Max. Year: 2018
N: 35

Min. Year:1946 Max. Year: 2020
N: 37 n: 2201 \bar{N} : 29 \bar{T} : 59

4.16.16 Right to Strike in Constitution (ccp_strike)

Does the constitution provide for a right to strike?

1. Yes
2. Yes, but with limitations
3. No
96. Other

Min. Year:2015 Max. Year: 2018
N: 35

Min. Year:1946 Max. Year: 2020
N: 37 n: 2201 \bar{N} : 29 \bar{T} : 59

4.16.17 New Constitutional System (ccp_syst)

Identifies new constitutional systems.

Min. Year:2018 Max. Year: 2018
N: 36

Min. Year:1946 Max. Year: 2020
N: 38 n: 2405 \bar{N} : 32 \bar{T} : 63

4.16.18 Year in which the Constitutional System was Promulgated (ccp_systyear)

Year in which the constitutional system was promulgated.

Min. Year:2018 Max. Year: 2018
N: 34

Min. Year:1946 Max. Year: 2020
N: 36 n: 2252 \bar{N} : 30 \bar{T} : 63

4.16.19 Duty of People is to Pay Taxes in Constitution (ccp_taxes)

Does the constitution refer to a duty to pay taxes?

- 1. Yes
- 2. No
- 96. Other

Min. Year:2015 Max. Year: 2018
N: 35

Min. Year:1946 Max. Year: 2020
N: 37 n: 2201 \bar{N} : 29 \bar{T} : 59

4.17 Cheibub, Gandhi and Vreeland

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

(Data downloaded: 2021-10-06)

Classification of Political Regimes

Classification of political regimes as democracy and dictatorship. Classification of democracies as parliamentary, semi-presidential (mixed) and presidential. Classification of dictatorships as military, civilian and royal.

4.17.1 Democracy (chga_demo)

A regime is considered a democracy if the executive and the legislature is directly or indirectly elected by popular vote, multiple parties are allowed, there is de facto existence of multiple parties outside of regime front, there are multiple parties within the legislature, and there has been no consolidation of incumbent advantage (e.g. unconstitutional closing of the lower house or extension of incumbent's term by postponing of subsequent elections). Transition years are coded as the regime that emerges in that year.

- 0. No Democracy
- 1. Democracy

(Data downloaded: 2021-12-02)

The CIRIGHTS Data project

The CIRI Human Rights Dataset contains standards-based quantitative information on government respect for 15 internationally recognized human rights for 202 countries, annually from 1981-2011. It is designed for use by scholars and students who seek to test theories about the causes and consequences of human rights violations, as well as policy makers and analysts who seek to estimate the human rights effects of a wide variety of institutional changes and public policies including democratization, economic aid, military aid, structural adjustment, and humanitarian intervention.

The original dataset contains the last version of the CIRI dataset, along with supporting documentation. The creation of the data and documentation has been supported by the National Science Foundation under Grant Nos. SES-0318273 (2004-2006), SES-0647969 (2007-2010), and SES-0647916 (2007-2010). (2014-04-14)

Note: The three different missing codes -66 (country is occupied by foreign powers), -77 (complete collapse of central authority), -999 (missing) have all been coded as missing.

4.18.1 Freedom of Assembly and Association (ciri_assn)

It is an internationally recognized right of citizens to assemble freely and to associate with other persons in political parties, trade unions, cultural organizations, or other special-interest groups. This variable indicates the extent to which the freedoms of assembly and association are subject to actual governmental limitations or restrictions (as opposed to strictly legal protections). A score of 0 indicates that citizens' rights to freedom of assembly or association were severely restricted or denied completely to all citizens; a score of 1 indicates that these rights were limited for all citizens or severely restricted or denied for select groups; and a score of 2 indicates that these rights were virtually unrestricted and freely enjoyed by practically all citizens in a given year.

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1981 Max. Year: 2011
N: 37 n: 1048 \bar{N} : 34 \bar{T} : 28

4.18.2 Disappearance (ciri_disap)

Disappearances are cases in which people have disappeared, political motivation appears likely, and the victims have not been found. Knowledge of the whereabouts of the disappeared is, by definition, not public knowledge. However, while there is typically no way of knowing where victims are, it is typically known by whom they were taken and under what circumstances. A score of 0 indicates that disappearances have occurred frequently in a given year; a score of 1 indicates that disappearances occasionally occurred; and a score of 2 indicates that disappearances did not occur in a given year.

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1981 Max. Year: 2011
N: 37 n: 1048 \bar{N} : 34 \bar{T} : 28

4.18.3 Freedom of Domestic Movement (ciri_dommov)

This variable indicates citizens' freedom to travel within their own country. A score of 0 indicates that this freedom was severely restricted; a score of 1 indicates the freedom was somewhat restricted, and a score of 2 indicates unrestricted freedom of foreign movement.

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1981 Max. Year: 2011
N: 37 n: 1048 \bar{N} : 34 \bar{T} : 28

4.18.4 Electoral Self-Determination (ciri_elecsd)

This variable indicates to what extent citizens enjoy freedom of political choice and the legal right and ability in practice to change the laws and officials that govern them through free and fair elections. This right is sometimes known as the right to self-determination. A score of 0 indicates that the right to self-determination through free and fair elections did not exist in law or practice during the year in question. A score of 1 indicates that while citizens had the legal right to self-determination, there were some limitations to the fulfillment of this right in practice. Therefore, in states receiving a 1, political participation was only moderately free and open. A score of 2 indicates that political participation was very free and open during the year in question and citizens had the right to self-determination through free and fair elections in both law and practice.

Min. Year:1981 Max. Year: 2011
N: 37 n: 1048 \bar{N} : 34 \bar{T} : 28

4.18.5 Empowerment Index (ciri_empinx)

This is an additive index constructed from the Foreign Movement, Domestic Movement, Freedom of Speech, Freedom of Assembly and Association, Workers' Rights, Electoral Self-Determination, and Freedom of Religion indicators. It ranges from 0 (no government respect for these seven rights) to 14 (full government respect for these seven rights).

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1981 Max. Year: 2011
N: 37 n: 1048 \bar{N} : 34 \bar{T} : 28

4.18.6 Freedom of Foreign Movement (ciri_formov)

This variable indicates citizens' freedom to leave and return to their country. A score of 0 indicates that this freedom was severely restricted, a score of 1 indicates the freedom was somewhat restricted, and a score of 2 indicates unrestricted freedom of foreign movement.

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1981 Max. Year: 2011
N: 37 n: 1048 \bar{N} : 34 \bar{T} : 28

4.18.7 Independence of the Judiciary (ciri_injud)

This variable indicates the extent to which the judiciary is independent of control from other sources, such as another branch of the government or the military. A score of 0 indicates "not independent", a score of 1 indicates "partially independent" and a score of 2 indicates "generally independent".

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1981 Max. Year: 2011
N: 37 n: 1048 \bar{N} : 34 \bar{T} : 28

4.18.8 Extrajudicial Killing (ciri_kill)

Extrajudicial killings are killings by government officials without due process of law. They include murders by private groups if instigated by government. These killings may result from the deliberate, illegal, and excessive use of lethal force by the police, security forces, or other agents of the state whether against criminal suspects, detainees, prisoners, or others. A score of 0 indicates that extrajudicial killings were practiced frequently in a given year; a score of 1 indicates that extrajudicial killings were practiced occasionally; and a score of 2 indicates that such killings did not occur in a given year.

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1981 Max. Year: 2011
N: 37 n: 1048 \bar{N} : 34 \bar{T} : 28

4.18.9 Physical Integrity Rights (ciri_physint)

This is an additive index constructed from the Torture, Extrajudicial Killing, Political Imprisonment, and Disappearance indicators. It ranges from 0 (no government respect for these four rights) to 8 (full government respect for these four rights).

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1981 Max. Year: 2011
N: 37 n: 1048 \bar{N} : 34 \bar{T} : 28

4.18.10 Political Imprisonment (ciri_polpris)

Political imprisonment refers to the incarceration of people by government officials because of: their speech; their non-violent opposition to government policies or leaders; their religious beliefs; their non-violent religious practices including proselytizing; or their membership in a group, including an ethnic or racial group. A score of 0 indicates that there were many people imprisoned because of their religious, political, or other beliefs in a given year; a score of 1 indicates that a few people were imprisoned; and a score of 2 indicates that no persons were imprisoned for any of the above reasons in a given year.

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1981 Max. Year: 2011
N: 37 n: 1048 \bar{N} : 34 \bar{T} : 28

4.18.11 New Freedom of Religion (ciri_relfre)

This variable indicates the extent to which the freedom of citizens to exercise and practice the irreligious beliefs is subject to actual government restrictions. Citizens should be able to freely practice their religion and proselytize (attempt to convert) other citizens to their religion as long as such attempts are done in a non-coercive, peaceful manner. A score of 0 indicates that government restrictions on religious practices are severe and widespread. A score of 1 indicates such practices are moderate, and a 0 indicates such practices are practically absent.

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1981 Max. Year: 2011
N: 37 n: 1048 \bar{N} : 34 \bar{T} : 28

4.18.12 Freedom of Speech (ciri_speech)

This variable indicates the extent to which freedoms of speech and press are affected by government censorship, including ownership of media outlets. Censorship is any form of restriction that is placed on freedom of the press, speech or expression. Expression may be in the form of art or music. A score of 0 indicates that government censorship of the media was complete; a score of 1 indicates that there was some government censorship of the media; and a score of 2 indicates that there was no government censorship of the media in a given year.

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1981 Max. Year: 2011
N: 37 n: 1048 \bar{N} : 34 \bar{T} : 28

4.18.13 Torture (ciri_tort)

Torture refers to the purposeful inflicting of extreme pain, whether mental or physical, by government officials or by private individuals at the instigation of government officials. Torture includes the use of physical and other force by police and prison guards that is cruel, inhuman, or degrading. This also includes deaths in custody due to negligence by government officials. A score of 0 indicates that torture was practiced frequently in a given year; a score of 1 indicates that torture was practiced occasionally; and a score of 2 indicates that torture did not occur in a given year.

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1981 Max. Year: 2011
N: 37 n: 1048 \bar{N} : 34 \bar{T} : 28

4.18.14 Women's Economic Rights (ciri_wecon)

Women's economic rights include a number of internationally recognized rights. These rights include:

- Equal pay for equal work,
- Free choice of profession or employment without the need to obtain a husband or male relative's consent,
- The right to gainful employment without the need to obtain a husband or male relative's consent,
- Equality in hiring and promotion practices,
- Job security (maternity leave, unemployment benefits, no arbitrary firing or layoffs, etc.),
- Non-discrimination by employers,
- The right to be free from sexual harassment in the workplace,

- The right to work at night,
- The right to work in occupations classified as dangerous,
- The right to work in the military and the police force.

A score of 0 indicates that there were no economic rights for women in law and that systematic discrimination based on sex may have been built into law. A score of 1 indicates that women had some economic rights under law, but these rights were not effectively enforced. A score of 2 indicates that women had some economic rights under law, and the government effectively enforced these rights in practice while still allowing a low level of discrimination against women in economic matters. Finally, a score of 3 indicates that all or nearly all of women's economic rights were guaranteed by law and the government fully and vigorously enforces these laws in practice.

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1981 Max. Year: 2011
N: 37 n: 1048 \bar{N} : 34 \bar{T} : 28

4.18.15 Women's Political Rights (ciri_wopol)

Women's political rights include a number of internationally recognized rights. These rights include:

- The right to vote
- The right to run for political office
- The right to hold elected and appointed government positions
- The right to join political parties
- The right to petition government officials.

A score of 0 indicates that women's political rights were not guaranteed by law during a given year. A score of 1 indicates that women's political rights were guaranteed in law, but severely prohibited in practice. A score of 2 indicates that women's political rights were guaranteed in law, but were still moderately prohibited in practice. Finally, a score of 3 indicates that women's political rights were guaranteed in both law and practice.

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1981 Max. Year: 2011
N: 37 n: 1048 \bar{N} : 34 \bar{T} : 28

4.18.16 Workers' Rights (ciri_worker)

Workers should have freedom of association at their workplaces and the right to bargain collectively with their employers. This variable indicates the extent to which workers enjoy these and other internationally recognized rights at work, including a prohibition on the use of any form of forced or compulsory labor; a minimum age for the employment of children; and acceptable conditions of work with respect to minimum wages, hours of work, and occupational safety and health. A score of 0 indicates that workers' rights were severely restricted; a score of 1 indicates that workers' rights were somewhat restricted; and a score of 2 indicates that workers' rights were fully protected during the year in question.

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1981 Max. Year: 2011
N: 37 n: 1048 \bar{N} : 34 \bar{T} : 28

4.18.17 Women's Social Rights (ciri_wosoc)

Women's social rights include a number of internationally recognized rights. These rights include:

- The right to equal inheritance
- The right to enter into marriage on a basis of equality with men
- The right to travel abroad
- The right to obtain a passport
- The right to confer citizenship to children or a husband
- The right to initiate a divorce
- The right to own, acquire, manage, and retain property brought into marriage
- The right to participate in social, cultural, and community activities
- The right to an education
- The freedom to choose a residence/domicile
- Freedom from female genital mutilation of children and of adults without their consent
- Freedom from forced sterilization.

A score of 0 indicates that there were no social rights for women in law and that systematic discrimination based on sex may have been built into law. A score of 1 indicates that women had some social rights under law, but these rights were not effectively enforced. A score of 2 indicates that women had some social rights under law and the government effectively enforced these rights in practice while still allowing a low level of discrimination against women in social matters. Finally, a score of 3 indicates that all or nearly all of women's social rights were guaranteed by law and the government fully and vigorously enforced these laws in practice. This variable was retired as of 2005.

N: N/A Min. Year: N/A Max. Year: N/A

4.19 Armingeon, Engler and Leemann

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Armingeon, K., Engler, S., & Leemann, L. (2021). Comparative political data set 1960-2019

<http://www.cpbs-data.org/>
(Data downloaded: 2021-10-25)

Comparative Political Data Set

The Comparative Political Data Set 1960-2019 (CPDS) is a collection of political and institutional data which have been assembled in the context of the research projects "Die Handlungsspielräume des Nationalstaates" and "Critical junctures. An international comparison" directed by Klaus Armingeon and funded by the Swiss National Science Foundation. This data set consists of (mostly) annual data for 36 democratic OECD and/or EU-member countries for the period of 1960 to 2019. In all countries, political data were collected only for the democratic periods. The data set is suited for cross-national, longitudinal and pooled time-series analyses. The present data set combines and replaces the earlier versions "Comparative Political Data Set I" (data for 23 OECD countries from 1960 onwards) and the "Comparative Political Data Set III" (data for 36 OECD and/or EU member states from 1990 onwards). A variable has been added to identify former CPDS I countries.

4.19.1 Number of changes in government per year (cpds_chg)

Number of changes in government per year [termination of government due to (a) elections, (b) voluntary resignation of the Prime Minister, (c) resignation of Prime Minister due to health reasons, (d) dissension within government (break up of the coalition), (e) lack of parliamentary support, (f) intervention by the head of state, or (g) broadening of the coalition (inclusion of new parties).

N: 33 n: 1566 \bar{N} : 26 \bar{T} : 47

4.19.28 Type of Government (cpds_tg)

Type of government based on the following classification:

1. Single-party majority government: One party takes all governments seats and has a parliamentary majority.
2. Minimal winning coalition: All participating parties are necessary to form a majority government [$>50.0\%$].
3. Surplus coalition: Coalition governments which exceed the minimal-winning criterion [$>50.0\%$].
4. Single-party minority government: The party in government does not possess a majority in Parliament [$<50.0\%$].
5. Multi-party minority government: The parties in government do not possess a majority in Parliament [$<50.0\%$].
6. Caretaker government: Governments which should simply maintain the status quo.
7. Technocratic government: Led by technocratic prime minister, consists of a majority of technocratic ministers and is in possession of a mandate to change the status quo.

(Data downloaded: 2021-10-06)

State Fragility Index and Matrix

The State Fragility Index and Matrix provides annual state fragility, effectiveness, and legitimacy indices and the eight component indicators for the world's 167 countries with populations greater than 500,000 in 2018.

4.20.1 State Fragility Index (cspf_sfi)

A country's fragility is closely associated with its state capacity to manage conflict; make and implement public policy; and deliver essential services and its systemic resilience in maintaining system coherence, cohesion, and quality of life; responding effectively to challenges and crises, and sustaining progressive development. State Fragility = Effectiveness Score + Legitimacy Score (25 points possible).

(Data downloaded: 2021-10-13)

Dataset of Electoral Volatility in Western Europe

This dataset provides data on electoral volatility and its internal components in parliamentary elections (lower house) in 20 countries of Western Europe for the period 1945-2020. It covers the entire universe of Western European elections held after World War II under democratic regimes. Data for Greece, Portugal and Spain have been collected after their democratizations in the 1970s. Altogether, a total of 347 elections (or, more precisely, electoral periods) are included.

When several elections were held in a single year, the data for the last election is included in the QoG dataset.

4.21.1 Electoral Volatility - Parties above 1% (2nd election in year) (dev_altv2)

Electoral volatility caused by vote switching between existing parties in a second election in the same year.

Min. Year:2015 Max. Year: 2019
N: 2

Min. Year:1946 Max. Year: 2019
N: 7 n: 9 \bar{N} : 0 \bar{T} : 1

4.21.2 Electoral Volatility - Parties below 1% (2nd election in year) (dev_othv2)

Electoral volatility caused by vote switching between parties falling below 1% of the national share in both the elections at time t and t+1 in a second election in the same year.

Min. Year:2015 Max. Year: 2019
N: 2

Min. Year:1946 Max. Year: 2019
N: 7 n: 9 \bar{N} : 0 \bar{T} : 1

4.21.3 Electoral Volatility - Parties entering/exiting party system (2nd election in ye (dev_regv2)

Electoral volatility caused by vote switching between parties that enter or exit from the party system in a second election in the same year.

Min. Year:2015 Max. Year: 2019
N: 2

Min. Year:1946 Max. Year: 2019

Dataset for Information and Accountability Transparency (2014)

The article “A global index of information transparency and accountability” (Williams, 2015) uses a relatively new methodology, similar to Transparency International’s Corruption Perceptions Index, to construct composite indicators of Informational Transparency, and Accountability. These new indicators use data from 29 sources, with scores being derived annually between 1980 and 2010 across more than 190 countries.

4.22.1 Accountability Transparency (diat_ati)

Accountability Transparency. The author has 16 separate indicators for the Accountability Transparency Index (six for the measurement of a free media, four for fiscal transparency, and six for political constraints). 1980 is considered to be the base year. The Accountability Transparency Index has 115 countries in 1980, but rising to up to 189 countries towards the end of the period.

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1980 Max. Year: 2010
N: 37 n: 1041 \bar{N} : 34 \bar{T} : 28

4.22.2 Information Transparency (diat_iti)

Information Transparency. Sub-indicators are constructed to reflect the nuances of this type of transparency. Specifically, three sub-components are constructed: (1) the existence of a free and independent media; (2) fiscal (budgetary) transparency; (3) political constraints. The author has 13 separate indicators for the Information Transparency Index (six for the quantity of information, four for the processes that generate that information, and three for the infrastructure required to disseminate that information). 1980 is considered to be the base year. The Information Transparency Index (ITI) has scores for initially 153 countries in 1980, increasing over time to 191 by the year 2010.

KOF Index of Globalization

KOF Index of Globalization. All indexes below range between 0 and 100, where higher values indicate a higher degree of globalization.

The KOF Globalization Index measures the economic, social and political dimension to globalization. It is used in order to monitor changes in the level of globalization of different countries over extended periods of time. The current KOF Globalization Index is available for 185 countries and covers the period from 1970 until 2018. A distinction is drawn between de facto and de jure for the Index as a whole, as well as within the economic, social and political components.

The Index measures globalization on a scale of 1 to 100. The figures for the constituent variables are expressed as percentiles. This means that outliers are smoothed and ensures that fluctuations over time are lower. Due to the new methodology, the current Index is only to a limited extent comparable to the old KOF Globalization Index.

4.23.1 Economic Globalization (dr_eg)

Economic globalisation (scale of 1 to 100) covers both trade flows as well as financial flows. De facto trade is determined with reference to the trade in goods and services. De jure trade covers customs duties, taxes and restrictions on trade.

Min. Year: 2018 Max. Year: 2018
N: 36

Min. Year: 1970 Max. Year: 2018
N: 37 n: 1631 \bar{N} : 33 \bar{T} : 44

4.23.2 Index of Globalization (dr_ig)

The overall index of globalization (scale of 1 to 100) is the weighted average of the following variables: economic globalization, social globalization and political globalization (dr_eg, dr_sg and dr_pg). Most weight has been given to economic followed by social globalization.

Min. Year:2018 Max. Year: 2018
N: 36

Min. Year:1970 Max. Year: 2018
N: 37 n: 1631 \bar{N} : 33 \bar{T} : 44

4.23.3 Political Globalization (dr_pg)

Political globalisation (scale of 1 to 100) regards the de facto segment measured with reference to the number of embassies and international non-governmental organisations (NGOs), along with participation in UN peacekeeping missions. The de jure segment contains variables focussing on membership of international organisations and international treaties.

Min. Year:2018 Max. Year: 2018
N: 36

Min. Year:1970 Max. Year: 2018
N: 37 n: 1631 \bar{N} : 33 \bar{T} : 44

4.23.4 Social Globalization (dr_sg)

Social globalization (scale of 1 to 100) is comprised of three segments, each with its own de facto and de jure segment. Interpersonal contact is measured within the de facto segment with reference to international telephone connections, tourist numbers and migration. Within the de jure segment, it is measured with reference to telephone subscriptions, international airports and visa restrictions. Flows of information are determined within the de facto segment with reference to international patent applications, international students and trade in high technology goods. The de jure segment measures access to TV and the internet, freedom of the press and international internet connections. Cultural proximity is measured in the de facto segment from trade in cultural goods, international trade mark registrations and the number of McDonald's restaurants and IKEA stores. The de jure area focuses on civil rights (freedom of citizens), gender equality and public spending on school education.

Min. Year:2018 Max. Year: 2018
N: 36

Min. Year:1970 Max. Year: 2018
N: 37 n: 1631 \bar{N} : 33 \bar{T} : 44

4.24 Global Footprint Network

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Global Footprint Network. (2021). National footprint accounts data set (1961-2017), 2021 edition [c 2021 Global Footprint Network. National Footprint Accounts, 2021 Edition, www.footprintnetwork.org].

http://www.Footprintnetwork.org/en/index.php/GFN/page/Footprint_data_and_results/
(Data downloaded: 2021-12-20)

Global Footprint Data

The National Footprint Accounts (NFAs) measure the ecological resource use and resource capacity of nations over time. Based on approximately 6,000 data points per country per year, the Accounts calculate the Footprints of more than 200 countries, territories, and regions from 1961 to the present, providing the core data needed for all Ecological Footprint analysis worldwide. This Data Package contains Ecological Footprint and biocapacity as well as Human Development and population data to give a first approximation of the biological resource situation of the featured countries.

4.24.1 Built-up land footprint- Ecological Footprint of Consumption (GHA per person) (ef_bul)

Built-up Land - Ecological Footprint in consumption. The built-up land Footprint is calculated based on the area of land covered by human infrastructure: transportation, housing, and industrial structures. Built-up land may occupy what would previously have been cropland. Measured in Global Hectares (GHA) per person.

Min. Year:2016 Max. Year: 2017
N: 34

Min. Year:1961 Max. Year: 2017
N: 36 n: 1585 \bar{N} : 28 \bar{T} : 44

4.24.2 Carbon footprint - Ecological Footprint of Consumption (GHA per person) (ef_carb)

Carbon - Ecological Footprint in consumption. The carbon Footprint, which represents the carbon dioxide emissions from burning fossil fuels in addition to the embodied carbon in imported goods. The carbon Footprint component is represented by the area of forest land required to sequester these carbon emissions. Currently, the carbon Footprint is the largest portion of humanity's Footprint.

Min. Year:2016 Max. Year: 2017
N: 34

Min. Year:1961 Max. Year: 2017
N: 36 n: 1585 \bar{N} : 28 \bar{T} : 44

4.24.3 Cropland footprint - Ecological Footprint of Consumption (GHA per person) (ef_crop)

Cropland - Ecological Footprint in consumption. Cropland is the most bioproductive of all the land-use types and consists of areas used to produce food and fibre for human consumption, feed for livestock, oil crops, and rubber. The cropland Footprint includes crop products allocated to livestock and aquaculture feed mixes, and those used for fibres and materials. Due to lack of globally consistent data sets, current cropland Footprint calculations do not yet take into account the extent to which farming techniques or unsustainable agricultural practices may cause long-term degradation of soil.

Min. Year:2016 Max. Year: 2017
N: 34

Min. Year:1961 Max. Year: 2017
N: 36 n: 1585 \bar{N} : 28 \bar{T} : 44

4.24.4 Total Ecological Footprint of Consumption (GHA per person) (ef_ef)

Total - Ecological Footprint in consumption. Measured in Global Hectares (GHA) per person.

Min. Year:2016 Max. Year: 2017
N: 35

Min. Year:1961 Max. Year: 2017
N: 37 n: 1801 \bar{N} : 32 \bar{T} : 49

4.24.5 Fish footprint - Ecological Footprint of Consumption (GHA per person) (ef_fg)

Fishing Ground - Ecological Footprint in consumption. The fishing grounds Footprint is calculated based on estimates of the maximum sustainable catch for a variety of fish species. These sustainable catch estimates are converted into an equivalent mass of primary production based on the various species' trophic levels. This estimate of maximum harvestable primary production is then divided amongst the continental shelf areas of the world. Fish caught and used in aquaculture feed mixes are included. Measured in Global Hectares (GHA) per person.

Min. Year:2016 Max. Year: 2017
N: 34

Min. Year:1961 Max. Year: 2017
N: 36 n: 1585 \bar{N} : 28 \bar{T} : 44

4.24.6 Forest product footprint - Ecological Footprint of Consumption (GHA per person) (ef_for)

Forest Production - Ecological Footprint in consumption. The forest product Footprint, which is calculated based on the amount of lumber, pulp, timber products, and fuel wood consumed by a population on a yearly basis. Measured in Global Hectares (GHA) per person.

Min. Year:2016 Max. Year: 2017
N: 34

Min. Year:1961 Max. Year: 2017
N: 36 n: 1585 \bar{N} : 28 \bar{T} : 44

4.24.7 Grazing footprint - Ecological Footprint of Consumption (GHA per person) (ef_gl)

Grazing - Ecological Footprint in consumption. Grazing land is used to raise livestock for meat, dairy, hide, and wool products. The grazing land Footprint is calculated by comparing the amount of livestock feed available in a country with the amount of feed required for all livestock in that year, with the remainder of feed demand assumed to come from grazing land. Measured in Global Hectares (GHA) per person.

Min. Year:2016 Max. Year: 2017
N: 34

Min. Year:1961 Max. Year: 2017
N: 36 n: 1585 \bar{N} : 28 \bar{T} : 44

4.25 UN Department of Economic and Social Affairs

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Department of Economic and Social Affairs. (2020). United nations e-government survey. <https://publicadministration.un.org/egovkb/en-us/Reports/UN-E-Government-Survey-2020>

<https://publicadministration.un.org/egovkb/en-us/Overview>
(Data downloaded: 2021-10-07)

UN E-Government Knowledgebase

The E-Government Development Index presents the state of E-Government Development of the United Nations Member States. Along with an assessment of the website development patterns in a country, the E-Government Development index incorporates the access characteristics, such as the infrastructure and educational levels, to reflect how a country is using information technologies to promote access and inclusion of its people. The EGDI is a composite measure of three important dimensions of e-government, namely: provision of online services, telecommunication connectivity and human capacity.

The EGDI is based on a comprehensive Survey of the online presence of all 193 United Nations Member States, which assesses national websites and how e-government policies and strategies are applied in general and in specific sectors for delivery of essential services. The assessment rates the e-government performance of countries relative to one another as opposed to being an absolute measurement. The results are tabulated and combined with a set of indicators embodying a country's capacity to participate in the information society, without which e-government development efforts are of limited immediate use.

Although the basic model has remained consistent, the precise meaning of these values varies from one edition of the Survey to the next as understanding of the potential of e-government changes and the underlying technology evolves. This is an important distinction because it also implies that it is a comparative framework that seeks to encompass various approaches that may evolve over time instead of advocating a linear path with an absolute goal.

Mathematically, the EGDI is a weighted average of three normalized scores on three most important dimensions of e-government, namely: (1) scope and quality of online services (Online Service Index, OSI), (2) development status of telecommunication infrastructure (Telecommunication Infrastructure Index, TII), and (3) inherent human capital (Human Capital Index, HCI).

The EGDI is not designed to capture e-government development in an absolute sense; rather, it aims to give a performance rating of national governments relative to one another.

4.25.1 E-Government Index (egov_egov)

The E-Government Development Index (EGDI) is a weighted average of normalised scores on the three most important dimensions of e-government, namely: scope and quality of online services (Online Service Index, OSI), status of the development of telecommunication infrastructure (Telecommunication Infrastructure Index, TII) and inherent human capital (Human Capital Index, HCI). Each of these sets of indices is in itself a composite measure that can be extracted and analysed independently.

Min. Year:2019 Max. Year: 2019
N: 36

Min. Year:2002 Max. Year: 2019
N: 36 n: 360 \bar{N} : 20 \bar{T} : 10

4.25.2 E-Participation Index (egov_epar)

The E-Participation Index (EPI) is derived as a supplementary index to the UN E-Government Survey. It extends the dimension of the Survey by focusing on the use of online services to facilitate provision of information by governments to citizens (e-information sharing), interaction with stakeholders (e-consultation) and engagement in decision-making processes.

A country's EPI reflects the e-participation mechanisms that are deployed by the government as compared to all other countries. The purpose of this measure is not to prescribe any specific practice, but rather to offer insight into how different countries are using online tools in promoting interaction between the government and its people, as well as among the people, for the benefit of all.

Min. Year:2019 Max. Year: 2019
N: 36

Min. Year:2002 Max. Year: 2019
N: 36 n: 360 \bar{N} : 20 \bar{T} : 10

4.25.3 Human Capital Index (egov_hci)

The Human Capital Index (HCI) consists of four components:

- (i) adult literacy rate;
- (ii) the combined primary, secondary and tertiary gross enrolment ratio;
- (iii) expected years of schooling; and
- (iv) average years of schooling.

Data for HCI components was extracted from the UNESCO-UIS source.

Min. Year:2019 Max. Year: 2019
N: 36

Min. Year:2002 Max. Year: 2019
N: 36 n: 360 \bar{N} : 20 \bar{T} : 10

4.25.4 Online Service Index (egov_osi)

The Online Service Index (OSI) values were constructed by researchers, including UN experts and online United Nations Volunteers (UNVs) from over 60 countries with coverage of 66 languages assessed each country's national website in the native language, including the national portal, e-services portal and e-participation portal, as well as the websites of the related ministries of education, labour, social services, health, finance and environment as applicable. The UNVs included qualified graduate students and volunteers from universities in the field of public administration.

Min. Year:2019 Max. Year: 2019
N: 36

Min. Year:2002 Max. Year: 2019
N: 36 n: 360 \bar{N} : 20 \bar{T} : 10

4.25.5 Telecommunication Infrastructure Index (egov_tii)

The Telecommunication Infrastructure Index (TII) is an arithmetic average composite of five indicators:

- (i) estimated internet users per 100 inhabitants;
- (ii) number of main fixed telephone lines per 100 inhabitants;
- (iii) number of mobile subscribers per 100 inhabitants;
- (iv) number of wireless broadband subscriptions per 100 inhabitants; and
- (v) number of fixed broadband subscriptions per 100 inhabitants.

Data for each component was extracted from the ITU source.

Min. Year:2019 Max. Year: 2019
N: 36

Min. Year:2002 Max. Year: 2019

(Data downloaded: 2021-12-20)

Environmental Performance Index Data 2020

The Environmental Performance Index provides a ranking that shines light on how each country manages environmental issues. The Environmental Performance Index (EPI) ranks how well countries perform on high-priority environmental issues in two broad policy areas: protection of human health from environmental harm and protection of ecosystems. Within these two policy objectives the EPI scores country performance in ten issue areas comprised of 32 indicators. Indicators in the EPI measure how close countries are to meeting internationally established targets or, in the absence of agreed-upon targets, how they compare to the range of observed countries.

Note: In many cases the EPI variables lack actual observations and rely on imputation. Please refer to the original documentation on more information about this. Also, some values (usually the value 0) are very unlikely, please use your judgement whether to treat these as the value 0 or as “Data missing”.

4.26.1 Agriculture (0-100) (epi_agr)

Agriculture. It is constructed from the Sustainable Nitrogen Management Index, which measures the Euclidean distance from an ideal point with optimal nitrogen use efficiency (NUE) and crop yield.

Min. Year: 2020 Max. Year: 2020
N: 36

N: N/A Min. Year: N/A Max. Year: N/A \bar{N} : N/A
 \bar{T} : N/A

4.26.2 Air Quality (0-100) (epi_air)

Air Quality. It measures household air pollution (HAP) as the health risk posed by the incomplete combustion of solid fuels, using the number of age-standardized disability-adjusted life-years (DALYs) lost per 100,000 persons due to this risk. PM2.5 exposure: as a measure of chronic exposure, it uses the population-weighted average ambient concentration of PM2.5 in each country. PM2.5 exceedance: as a measure of acute exposure, it uses the proportion of the population in each year that is exposed to ambient PM2.5 concentrations that exceed World Health Organization (WHO) thresholds of 10, 15, 25, and 35 micrograms per meter cubed. These four proportions are averaged to produce a summary of the distribution of exposure levels in the country’s population.

N: 36

N: N/A Min. Year: N/A Max. Year: N/A \bar{N} : N/A
 \bar{T} : N/A

4.26.3 Pollution Emissions (0-100) (epi_ape)

Air Pollution. The Pollution Emissions issue category measures progress on managing the emissions of two primary air pollutants. It is composed of two indicators, adjusted emission growth rates for SO₂ and NO_x.

Min. Year:2020 Max. Year: 2020
N: 36

N: N/A Min. Year: N/A Max. Year: N/A \bar{N} : N/A
 \bar{T} : N/A

4.26.4 Biodiversity and Habitat (0-100) (epi_bdh)

Biodiversity and Habitat. This indicator includes:

- 1 Terrestrial biome protection (national weights). The percentage of biomes in protected areas, weighted by national composition of biomes.
- 2 Terrestrial biome protection (global weights). The percentage of biomes in protected areas, weighted by global composition of biomes.
- 3 Marine protected areas. The percentage of marine protected areas (MPAs) within a country's exclusive economic zone (EEZ).
- 4 Species Protection Index. The average area of species' distributions in a country with protected areas.
- 5 Protected Area Representativeness Index. The extent to which terrestrial protected areas are ecologically representative.
- 6 Species Habitat Index. The proportion of habitat within a country remaining, relative to a baseline set in the year 2001.
- 7 Biodiversity Habitat Index. The effects of habitat loss, degradation, and fragmentation on the expected retention of terrestrial biodiversity.

Min. Year:2020 Max. Year: 2020
N: 36

N: N/A Min. Year: N/A Max. Year: N/A \bar{N} : N/A
 \bar{T} : N/A

4.26.5 Climate Change (0-100) (epi_cch)

The Climate Change issue category measures progress to combat global climate change, which exacerbates all other environmental threats and imperils human health and safety. It is composed of eight indicators: adjusted emission growth rates for four greenhouse gases (CO₂, CH₄, F-gases, and N₂O)

and one climate pollutant (black carbon); growth rate in CO2 emissions from land cover; greenhouse gas intensity growth rate; and greenhouse gas emissions per capita.

N: 36 **\bar{T} :** N/A

4.26.6 Ecosystem Services (0-100) (epi_ecs)

The new Ecosystem Services issue category recognizes the important services ecosystems provide to human and environmental well-being, including carbon sequestration and storage, biodiversity habitat, nutrient cycling, and coastal protection. It consists of three indicators to evaluate the state of these ecosystems: tree cover loss (%90), along with two new pilot indicators for 2020 - grassland loss (%5) and wetland loss (%5).

N: 35 **\bar{T} :** N/A

4.26.7 Environmental Health (0-100) (epi_eh)

The Environmental Health policy objective measures how well countries are protecting their populations from environmental health risks. It comprises 40% of the total EPI score and is made up of four issue categories: Air Quality (50%), Sanitation & Drinking Water (%40), Heavy Metals (%5), and Waste Management (%5).

Min. Year:2020 **Max. Year:** 2020 **N:** N/A **Min. Year:** N/A **Max. Year:** N/A **\bar{N} :** N/A
N: 36 **\bar{T} :** N/A

4.26.8 Environmental Performance Index (0-100) (epi_epi)

The 2020 Environmental Performance Index (EPI) scores 180 countries on 32 performance indicators across ten issue categories covering environmental health and ecosystem vitality. The 2020 EPI represents a composite index. The EPI researchers begin by gathering data on 32 individual metrics of environmental performance. These metrics are aggregated into a hierarchy beginning with eleven issue categories: Air Quality, Sanitation & Drinking Water, Heavy Metals, Waste Management, Biodiversity and Habitat, Ecosystem Services, Fisheries, Climate Change, Pollution Emissions, Water Resources, and Agriculture.

These issue categories are then combined into two policy objectives, Environmental Health and

Ecosystem Vitality, and then finally consolidated into the overall EPI. To allow for meaningful comparisons, the EPI researchers construct scores for each of the 32 indicators, placing them onto a common scale where 0 indicates worst performance and 100 indicates best performance. How far a country is from achieving international targets of sustainability determines its placement on this scale.

Min. Year:2020 **Max. Year:** 2020
N: 36

N: N/A **Min. Year:** N/A **Max. Year:** N/A \bar{N} : N/A
 \bar{T} : N/A

4.26.9 Ecosystem Vitality (0-100) (epi_ev)

The Ecosystem Vitality policy objective measures how well countries are preserving, protecting, and enhancing ecosystems and the services they provide. It comprises 60% of the total EPI score and is made up of seven issue categories: Biodiversity & Habitat (25%), Ecosystem Services (10%), Fisheries (10%), Climate Change (40%), Pollution Emissions (5%), Agriculture (5%), and Water Resources (5%).

Min. Year:2020 **Max. Year:** 2020
N: 36

N: N/A **Min. Year:** N/A **Max. Year:** N/A \bar{N} : N/A
 \bar{T} : N/A

4.26.10 Sanitation and Drinking Water (0-100) (epi_h2o)

Sanitation & Drinking Water. This indicator includes:

1 Unsafe sanitation. EPI researchers measure sanitation as the proportion of a country's population exposed to health risks from their access to sanitation, defined by the primary toilet type used by households.

2 Unsafe drinking water. EPI researchers measure drinking water as the proportion of a country's population exposed to health risks from their access to drinking water, defined by the primary water source used by households and the household water treatment, or the treatment that happens at the point of water collection.

Both sanitation and drinking water are measured using the number of age-standardized disability-adjusted life-years (DALYs) lost per 100,000 persons. Minimizing the health risks posed from unsafe sanitation and drinking water is a vital step in evaluating a country's ability to maintain clean water systems and minimize contact with dangerous bacteria and viruses.

4.30 James D. Fearon

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Fearon, J. D. (2003). Ethnic and cultural diversity by country. *Journal of Economic Growth*, 8(2), 195–222

<https://fearonresearch.stanford.edu/paperspublished/journal-articles-2/>
(Data downloaded: 2021-11-11)

Ethnic and Cultural Diversity by Country

Data used in the article Ethnic and Cultural Diversity by Country published in Journal of Economic Growth, containing data on 822 ethnic groups in 160 countries that made up at least 1 percent of the country population in the early 1990s. This data was last originally updated in 2003. For this compilation, QoG Data imputes the values from 2003 into 2019.

4.30.1 Cultural Diversity (fe_cultdiv)

This measure modifies fractionalization (fe_etfra) so as to take some account of cultural distances between groups, measured as the structural distance between languages spoken by different groups in a country. If the groups in a country speak structurally unrelated languages, their cultural diversity index will be the same as their level of ethnic fractionalization (fe_etfra). The more similar are the languages spoken by different ethnic groups, however, the more will this measure be reduced below the level of ethnic fractionalization for that country. The values are assumed to be constant for all years.

Min. Year:2018 Max. Year: 2018
N: 34

Min. Year:1946 Max. Year: 2021
N: 34 n: 2584 \bar{N} : 34 \bar{T} : 76

4.30.2 Ethnic Fractionalization (fe_etfra)

Restricting attention to groups that had at least 1 percent of country population in the 1990s, Fearon identifies 822 ethnic and “ethnoreligious” groups in 160 countries. This variable reflects the probability that two randomly selected people from a given country will belong to different such groups. The variable thus ranges from 0 (perfectly homogeneous) to 1 (highly fragmented). The values are assumed to be constant for all years.

4.31 Freedom House

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Freedom House. (2021). Freedom in the world 2021. <https://freedomhouse.org/report/freedom-world>

<https://freedomhouse.org/report/freedom-world>
(Data downloaded: 2021-12-14)

Freedom in the World

Freedom in the World is an annual global report on political rights and civil liberties, composed of numerical ratings and descriptive texts for each country and a select group of territories. The 2020 edition covers developments in 195 countries and 15 territories from January 1, 2019, through December 31, 2019.

The report's methodology is derived in large measure from the Universal Declaration of Human Rights, adopted by the UN General Assembly in 1948. Freedom in the World is based on the premise that these standards apply to all countries and territories, irrespective of geographical location, ethnic or religious composition, or level of economic development. Freedom in the World operates from the assumption that freedom for all people is best achieved in liberal democratic societies.

Freedom in the World assesses the real-world rights and freedoms enjoyed by individuals, rather than governments or government performance per se. Political rights and civil liberties can be affected by both state and nonstate actors, including insurgents and other armed groups. To read more about the methodology used by Freedom House, please visit <https://freedomhouse.org/reports/freedom-world/freedom-world-research-methodology>. These subcategories, drawn from the Universal Declaration of Human Rights, represent the fundamental components of freedom, which include an individual's ability to:

- Vote freely in legitimate elections;
- Participate freely in the political process;
- Have representatives that are accountable to them;
- Exercise freedoms of expression and belief;
- Be able to freely assemble and associate;
- Have access to an established and equitable system of rule of law;
- Enjoy personal freedoms, including free movement, the right to hold private property, social freedoms, and equal access to economic opportunities.

Note: The 1982 edition of Freedom in the World covers the period Jan 1981 - Aug 1982 (=1981 in our dataset). The 1983-84 edition covers the period Aug 1982 - Nov 1983 (=1983 in our dataset). This leaves 1982 empty. For 1972, South Africa was in the original data rated as "White" (fh_cl: 3, fh_pr: 2, fh_status: Free) and "Black" (fh_cl: 6, fh_pr: 5, fh_status: Not Free). We treat South Africa 1972 as missing.

4.31.1 Associational and Organizational Rights (fh_aor)

Associational and Organizational Rights - The variable evaluates the freedom of assembly, demonstrations and open public discussion; the freedom for nongovernmental organizations; and the freedom

for trade unions, peasant organizations and other professional and private organizations. Countries are graded between 0 (worst) and 12 (best).

Min. Year:2018 Max. Year: 2018
N: 36

Min. Year:2005 Max. Year: 2020
N: 36 n: 576 \bar{N} : 36 \bar{T} : 16

4.31.2 Civil Liberties (fh_cl)

Civil Liberties Rating - Civil liberties allow for the freedoms of expression and belief, associational and organizational rights, rule of law, and personal autonomy without interference from the state. The more specific list of rights considered vary over the years. Countries are graded between 1 (most free) and 7 (least free).

Min. Year:2018 Max. Year: 2018
N: 36

Min. Year:1972 Max. Year: 2020
N: 37 n: 1613 \bar{N} : 33 \bar{T} : 44

4.31.3 Electoral Process (fh_ep)

Electoral Process - The variable measures to what extent the national legislative representatives and the national chief authority are elected through free and fair elections. Countries are graded between 0 (worst) and 12 (best).

Min. Year:2018 Max. Year: 2018
N: 36

Min. Year:2005 Max. Year: 2020
N: 36 n: 576 \bar{N} : 36 \bar{T} : 16

4.31.4 Freedom of Expression and Belief (fh_feb)

Freedom of Expression and Belief - The variable measures the freedom and independence of the media and other cultural expressions; the freedom of religious groups to practice their faith and express themselves; the academic freedom and freedom from extensive political indoctrination in the educational system; and the ability of the people to engage in private (political) discussions without fear of harassment or arrest by the authorities. Countries are graded between 0 (worst) and 16 (best).

Min. Year:2018 Max. Year: 2018
N: 36

Min. Year:2005 Max. Year: 2020
N: 36 n: 576 \bar{N} : 36 \bar{T} : 16

4.31.5 Functioning of Government (fh_fog)

Functioning of Government - The variable examines in what extent the freely elected head of government and a national legislative representative determine the policies of the government; if the government is free from pervasive corruption; and if the government is accountable to the electorate between elections and operates with openness and transparency. Countries are graded between 0 (worst) and 12 (best).

Min. Year:2018 Max. Year: 2018
N: 36

Min. Year:2005 Max. Year: 2020
N: 36 n: 576 \bar{N} : 36 \bar{T} : 16

4.31.6 Level of Democracy (Freedom House/Imputed Polity) (fh_ipolity2)

Scale ranges from 0-10 where 0 is least democratic and 10 most democratic. Average of Freedom House (fh_pr and fh_cl) is transformed to a scale 0-10 and Polity (p_polity2) is transformed to a scale 0-10. These variables are averaged into fh_ipolity2. The imputed version has imputed values for countries where data on Polity is missing by regressing Polity on the average Freedom House measure. Hadenius & Teorell (2005) show that this average index performs better both in terms of validity and reliability than its constituent parts.

Min. Year:2018 Max. Year: 2018
N: 36

Min. Year:1972 Max. Year: 2020
N: 37 n: 1613 \bar{N} : 33 \bar{T} : 44

4.31.7 Personal Autonomy and Individual Rights (fh_pair)

Personal Autonomy and Individual Rights - The variable evaluates the extent of state control over travel, choice of residence, employment or institution of higher education; the right of citizens to own property and establish private businesses; the private business' freedom from unduly influence by government officials, security forces, political parties or organized crime; gender equality, freedom of choice of marriage partners and size of family; equality of opportunity and absence of economic exploitation. Countries are graded between 0 (worst) and 16 (best).

Min. Year:2018 Max. Year: 2018
N: 36

Min. Year:2005 Max. Year: 2020
N: 36 n: 576 \bar{N} : 36 \bar{T} : 16

4.31.8 Level of Democracy (Freedom House/Polity) (fh_polity2)

Scale ranges from 0-10 where 0 is least democratic and 10 most democratic. Average of Freedom House (fh_pr and fh_cl) is transformed to a scale 0-10 and Polity (p_polity2) is transformed to a

scale 0-10. These variables are averaged into fh_polity2.

Min. Year:2018 Max. Year: 2018
N: 35

Min. Year:1972 Max. Year: 2020
N: 36 n: 1497 \bar{N} : 31 \bar{T} : 42

4.31.9 Political Pluralism and Participation (fh_ppp)

Political Pluralism and Participation - This variable encompasses an examination of the right of the people to freely organize in political parties; the existence of an opposition with a realistic possibility to increase its support; the ability of the people to make political choices free from domination by the military, totalitarian parties or other powerful groups; and the existence of full political rights for all minorities. Countries are graded between 0 (worst) and 16 (best).

Min. Year:2018 Max. Year: 2018
N: 36

Min. Year:2005 Max. Year: 2020
N: 36 n: 576 \bar{N} : 36 \bar{T} : 16

4.31.10 Political Rights (fh_pr)

Political Rights Rating - Political rights enable people to participate freely in the political process, including the right to vote freely for distinct alternatives in legitimate elections, compete for public office, join political parties and organizations, and elect representatives who have a decisive impact on public policies and are accountable to the electorate. The specific list of rights considered varies over the years. Countries are graded between 1 (most free) and 7 (least free).

Min. Year:2018 Max. Year: 2018
N: 36

Min. Year:1972 Max. Year: 2020
N: 37 n: 1613 \bar{N} : 33 \bar{T} : 44

4.31.11 Rule of Law (fh_rol)

Rule of Law - The variable measures the independence of the judiciary; the extent to which rule of law prevails in civil and criminal matters; the existence of direct civil control over the police; the protection from political terror, unjustified imprisonment, exile and torture; absence of war and insurgencies; and the extent to which laws, policies and practices guarantee equal treatment of various segments of the population. Countries are graded between 0 (worst) and 16 (best).

Min. Year:2018 Max. Year: 2018
N: 36

Min. Year:2005 Max. Year: 2020
N: 36 n: 576 \bar{N} : 36 \bar{T} : 16

4.31.12 Freedom Status (fh_status)

1. Free
2. Partly Free
3. Not Free

Until 2003, countries whose combined average ratings for Political Rights and Civil Liberties fell between 1.0 and 2.5 were designated “Free”; between 3.0 and 5.5 “Partly Free”, and between 5.5 and 7.0 “Not Free”. Since then, countries whose ratings average 1.0 to 2.5 are considered “Free”, 3.0 to 5.0 “Partly Free”, and 5.5 to 7.0 “Not Free”.

(Data downloaded: 2021-12-15)

Freedom of the Press

Freedom of the Press, an annual report on media independence around the world, was published between 1980 and 2017, and assessed the degree of print, broadcast, and digital media freedom in 199 countries and territories. It provided numerical scores and country narratives evaluating the legal environment for the media, political pressures that influenced reporting, and economic factors that affected access to news and information.

Note: The number in the variable names indicate what time period they refer to.

- 1: 1979-1987
- 2: 1988-1992
- 3: 1993-1995
- 4: 1996-2000

4.32.2 Laws and Regulations that Influence Media Content (2001-2016) (fhp_mclr5)

Laws and Regulations that Influence the Media Content (2001-2016). The variable encompasses an examination of both the laws and regulations that could influence media content and the government's inclination to use these laws and legal institutions to restrict the media's ability to operate. Freedom House assesses the positive impact of legal and constitutional guarantees for freedom of expression; the potentially negative aspects of security legislation, the penal code, and other criminal statutes; penalties for libel and defamation; the existence of and ability to use freedom of information

legislation; the independence of the judiciary and of official media regulatory bodies; registration requirements for both media outlets and journalists; and the ability of journalists' groups to operate freely. The scale of the variable is 0-30. 0 indicates more freedom.

4.32.3 Political Pressures and Controls on Media Content (2001-2016) (fhp_mcpp5)

Political Pressures and Controls on Media Content (2001-2016). The variable evaluates the degree of political control over the content of news media. Issues examined include the editorial independence of both state-owned and privately owned media; access to information and sources; official censorship and self-censorship; the vibrancy of the media; the ability of both foreign and local reporters to cover the news freely and without harassment; and the intimidation of journalists by the state or other actors, including arbitrary detention and imprisonment, violent assaults, and other threats. The scale of the variable is 0-40. 0 indicates more freedom.

4.33 Fraser Institute

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Gwartney, J., Lawson, R., Hall, J., Murphy, R., Callais, J. T., Fike, R., Geloso, V., Kahli, N. S., McMahon, F., & van Staden, M. (2021). Economic Freedom Dataset 2021, published in Economic Freedom of the World: 2021. *Fraser Institute*. <https://www.fraserinstitute.org/economic-freedom/dataset>

<https://www.fraserinstitute.org/economic-freedom/dataset>
(Data downloaded: 2021-11-10)

Economic Freedom of the World Dataset

The index published in Economic Freedom of the World measures the degree to which the policies and institutions of countries are supportive of economic freedom. The cornerstones of economic freedom are personal choice, voluntary exchange, freedom to enter markets and compete, and security of the person and privately owned property. The EFW index now ranks 159 countries and territories. Data are available for approximately 100 nations and territories back to 1980, and many back to 1970. This data set makes it possible for scholars to analyze the impact of both cross-country differences in economic freedom and changes in that freedom across a time frame of three and a half decades.

For a consistent time-series for a particular country and/or longitudinal data for a panel of countries, the Fraser Institute previously developed and reported a chain-linked version of the index. One of the problems with the chain-linked index was that it was limited to just the 123 countries that were available in the chain-link's "base year" of 2000. With this year's report, the Institute is replacing the chain-linked index with the EFW Panel Dataset, which reports area and summary ratings for all countries for which we have a regular EFW index score in any given year.

The EFW Panel Dataset adjusts the regular EFW index in two ways. (1) From the most-recent year annually back to 2000, whenever possible, any missing data is estimated by autoregressively "backcasting" the data, meaning the actual values are used in later years to estimate the missing values for earlier years. For example, if a country is missing a data value for a particular component from 2000-2004, this method estimates the missing 2000-2004 values based on data available in 2005 and thereafter. This approach allows to have area and summary ratings for up to the entire 159 countries in the EFW index. (2) For 1970, 1975, 1980, 1985, 1990, and 1995, the index is chain-linked as described in previous editions. That is, using 2000 as the base year, changes in a country's scores backward in time are based only on changes in components that were present in adjoining years. It should be noted that the EFW Panel Dataset contains area and summary ratings only for those years in which the country received a regular EFW index rating.

4.33.1 Freedom to Trade Internationally (current) (fi_ftradeint)

The index ranges from 0-10 where 0 corresponds to "increasing tax rate on international trade", "slow import or export process", "small trade sectors relative to the population and geographic size", "exchange rate controls are present and a black-market exists", and "restrictions on the freedom of citizens to engage in capital market exchange with foreigners" and 10 corresponds to "no specific taxes on international trade", "swift import or export process", "large trade sectors relative to the population and geographic size", "no black-market exchange rate", and "no restrictions on the freedom of citizens to engage in capital market exchange with foreigners". The index consists of the following indicators: Taxes on international trade, Regulatory trade barriers, Actual size of trade

sector compared to expected size, Difference between official exchange rate and black market rate, and International capital market controls.

Min. Year:2018 Max. Year: 2019
N: 36

4.33.3 Economic Freedom of the World Index (current) (fi_index)

The index is founded upon objective components that reflect the presence (or absence) of economic freedom. The index comprises 21 components designed to identify the consistency of institutional arrangements and policies with economic freedom in five major areas: size of government (fi_sog), legal structure and security of property rights (fi_legprop), access to sound money (fi_sm), freedom to trade internationally (fi_ftradeint), regulation of credit, labor and business (fi_reg). The index ranges from 0-10 where 0 corresponds to “less economic freedom” and 10 to “more economic freedom”. This is the version of the index published at the current year of measurement, without taking methodological changes over time into account.

(Data downloaded: 2021-09-30)

State Capacity, Minority Shareholder Protections, and Stock Market Development

A longitudinal dataset on the adoption of minority shareholders' legal protections and the development of the stock market in 78 countries between 1970 and 2016.

4.34.1 Minority Shareholder Rights (gc_shr)

The ten key legal provisions identified as most relevant to the protection of minority shareholder rights are coded by a team of legal scholars coded between 0 and 1. The measures are not dichotomous because intermediate scores between 0 and 1 are possible. The sum of the scores for each of the ten legal provisions are the value of the variable, ranging from 0 to 10.

The ten legal provisions protecting the rights of minority shareholders:

1. Powers of the general meeting for de facto changes
2. Agenda-setting power
3. Anticipation of shareholder decision facilitated
4. Prohibition of multiple voting rights (super voting rights)
5. Independent board members
6. Feasibility of directors' dismissal
7. Private enforcement of directors' duties (derivative suit)
8. Shareholder action against resolutions of the general meeting
9. Mandatory bid
10. Disclosure of major share ownership

(Data downloaded: 2020-09-02)

The Political Terror Scale

The PTS seeks to measure political terror. The authors define political terror as violations of basic human rights to the physical integrity of the person by agents of the state within the territorial boundaries of the state in question. It is important to note that political terror as defined by the PTS is not synonymous with terrorism or the use of violence and intimidation in pursuit of political aims. The concept is also distinguishable from terrorism as a tactic or from criminal acts.

The PTS measures levels of political violence and terror that a country experiences in a particular year based on a 5-level "terror scale" originally developed by Freedom House. The data used in compiling this index comes from three different sources: the yearly country reports of Amnesty International, the U.S. State Department Country Reports on Human Rights Practices, and Human Rights Watch's World Reports.

4.35.1 Political Terror Scale - Amnesty International (gd_ptsa)

Political Terror Scale Levels from the yearly country reports of Amnesty International:

1. Countries under a secure rule of law, people are not imprisoned for their view, and torture is rare or exceptional. Political murders are extremely rare.
2. There is a limited amount of imprisonment for nonviolent political activity. However, few persons are affected, torture and beatings are exceptional. Political murder is rare.
3. There is extensive political imprisonment, or a recent history of such imprisonment. Execution or other political murders and brutality may be common. Unlimited detention, with or without a trial, for political views is accepted.
4. Civil and political rights violations have expanded to large numbers of the population. Murders, disappearances, and torture are a common part of life. In spite of its generality, on this level terror affects those who interest themselves in politics or ideas.
5. Terror has expanded to the whole population. The leaders of these societies place no limits on the means or thoroughness with which they pursue personal or ideological goals.

(Data downloaded: 2021-12-01)

Global Educational Attainment 1970-2015

These are IHME results data from a global analysis of educational attainment spanning the last 50 years. These data are an update to earlier estimates (Educational Attainment and Child Mortality Estimates by Country 1970-2009) and inform the IHME policy report “A Hand Up: Global Progress Towards Universal Education”, as well as the Social Determinants of Health Visualization, which is supported by the Center for Health Trends and Forecasts at IHME.

This data file provides estimates of average years of educational attainment per capita for people over the age of 15 for the years 1970-2015 by year, sex, and age group for 188 countries, 21 GBD regions, 7 GBD super regions, and the global aggregate. Age-standardized and population-weighted estimates are included for females 15-44 and for both sexes for the age group 25+.

IMF GFS - Expenditure by Functions of Government (COFOG)

The IMF Government Finance Statistics (GFS) database contains fiscal data for all reporting countries in the framework of the Government Finance Statistics Manual 2014 (GFSM 2014). It includes detailed data on revenues, expenditures, transactions in financial assets and liabilities, and balance sheet data and includes data for the general government sector and its subsectors (e.g., central government, local government, state government and social security funds). GFS data are compiled by country authorities and reported to the IMF Statistics Department annually. The data reported in the QoG Datasets is retrieved from Expenditure by Function of Government (COFOG) dataset, as the percentage of total expenditure by general government.

(Data downloaded: 2021-01-22)

The Global Gender Gap Index 2006-2019

The Global Gender Gap Report benchmarks 153 countries on their progress towards gender parity across four thematic dimensions: Economic Participation and Opportunity, Educational Attainment, Health and Survival, and Political Empowerment.

4.38.1 Global Gender Gap Educational Attainment Subindex (gggi_eas)

Educational Attainment (0 to 1, where 1 indicates no gap). This subindex captures the gap between women's and men's current access to education through ratios of women to men in primary-, secondary- and tertiary-level education. A longer-term view of the country's ability to educate women and men in equal numbers is captured through the ratio of the female literacy rate to the male literacy rate.

Min. Year:2017 Max. Year: 2020
N: 36

Min. Year:2006 Max. Year: 2020
N: 36 n: 539 \bar{N} : 36 \bar{T} : 15

4.38.2 Overall Global Gender Gap Index (gggi_ggi)

The Global Gender Gap Index (0 to 1, where 1 indicates no gap) examines the gap between men and women in four fundamental categories (subindexes): Economic Participation and Opportunity, Educational Attainment, Health and Survival and Political Empowerment.

Min. Year:2017 Max. Year: 2020
N: 36

Min. Year:2006 Max. Year: 2020
N: 36 n: 539 \bar{N} : 36 \bar{T} : 15

4.38.3 Global Gender Gap Health and Survival Subindex (gggi_hss)

Health and Survival (0 to 1, where 1 indicates no gap). This subindex provides an overview of the differences between women's and men's health through the use of two indicators. The first is the sex ratio at birth, which aims specifically to capture the phenomenon of missing women, prevalent in many countries with a strong son preference. Second, we use the gap between women's and men's healthy life expectancy. This measure provides an estimate of the number of years that women and men can expect to live in good health by taking into account the years lost to violence, disease, malnutrition and other relevant factors.

Min. Year:2017 Max. Year: 2020
N: 36

Min. Year:2006 Max. Year: 2020
N: 36 n: 539 \bar{N} : 36 \bar{T} : 15

4.38.4 Global Gender Gap Political Empowerment subindex (gggi_pes)

Political Empowerment (0 to 1, where 1 indicates no gap). This subindex measures the gap between men and women at the highest level of political decision-making through the ratio of women to men in ministerial positions and the ratio of women to men in parliamentary positions. In addition, we've included the ratio of women to men in terms of years in executive office (prime minister or president) for the last 50 years. A clear drawback in this category is the absence of any indicators capturing differences between the participation of women and men at local levels of government. Should such data become available at a globally comparative level in future years, it will be considered for inclusion in the Index.

4.38.5 Global Gender Gap Economic Participation and Opportunity Subindex (gggi_pos)

Economic Participation and Opportunity (0 to 1, where 1 indicates no gap). This subindex contains three concepts: the participation gap, the remuneration gap and the advancement gap. The participation gap is captured using the difference between women and men in labour force participation rates. The remuneration gap is captured through a hard data indicator (ratio of estimated female-to-male earned income) and a qualitative indicator gathered through the World Economic Forum's annual Executive Opinion Survey (wage equality for similar work). Finally, the gap between the advancement of women and men is captured through two hard data statistics (the ratio of women to men among legislators, senior officials and managers, and the ratio of women to men among technical and professional workers).

The Gender Inequality Index

The Gender Inequality Index (GII) reflects gender-based disadvantage in three dimensions - reproductive health, empowerment and the labour market - for as many countries as data of reasonable quality allow. It shows the loss in potential human development due to inequality between female and male achievements in these dimensions. It ranges from 0, where women and men fare equally, to 1, where one gender fares as poorly as possible in all measured dimensions.

4.39.1 Gender Inequality Index (0 to 1 higher disparity) (gii_gii)

The GII is an inequality index. It measures gender inequalities in three important aspects of human development-reproductive health, measured by maternal mortality ratio and adolescent birth rates; empowerment, measured by proportion of parliamentary seats occupied by females and proportion of adult females and males aged 25 years and older with at least some secondary education; and economic status, expressed as labour market participation and measured by labour force participation rate of female and male populations aged 15 years and older. The GII is built on the same framework as the IHDI-to better expose differences in the distribution of achievements between women and men. It measures the human development costs of gender inequality. Thus the higher the GII value the more disparities between females and males and the more loss to human development.

Expanded Trade and GDP Data

The dataset by Kristian Gleditsch provides estimates of trade flows between independent states (1948-2000) and GDP per capita of independent states (1950-2011). Version 6. In order to fill in gaps in the Penn World Table's mark 5.6 and 6.2 data (see: Heston, Summers & Aten), Gleditsch has imputed missing data by using an alternative source of data (the CIA World Fact Book), and through extrapolation beyond available time-series.

4.40.1 GDP per Capita (Current Prices) (gle_cgdpc)

GDP per capita (Current prices).

(Data downloaded: 2021-10-20)

Democratic Electoral Systems Around the World 1946-2016

The data focus on national-level (lower house) legislative and presidential elections in democratic regimes. A regime is classified as a democracy at the time of an election if (i) the chief executive is elected, (ii) the legislature is elected, (iii) there is more than one party competing in elections, and (iv) an alternation under identical electoral rules has taken place. A regime is classified as a dictatorship at the time of an election if any of these four conditions do not hold (Przeworski et al., 2000; Cheibub, Gandhi and Vreeland, 2010).

Note: The original values of -99 (the information is missing but should theoretically be available) and -88 (there is no single value for this particular variable) have been recoded to "?" (missing).

Note: The original data source is prepared in country-election format and data for interim years without elections has been filled using the latest election data, if an election was held in the last five years before the reference year.

4.41.1 Average District Magnitude (gol_adm)

Average district magnitude in an electoral tier. This is calculated as the total number of seats allocated in an electoral tier divided by the total number of districts in that tier.

Min. Year:2015 Max. Year: 2016

4.41.11 Institution (gol_inst)

This is a categorical variable indicating a country's regime type at the end of a given year. The data for this variable come from Cheibub, Gandhi and Vreeland (2010), which we updated through 2011.

0. Parliamentary democracy
1. Semi-presidential democracy
2. Presidential democracy
3. Civilian dictatorship
4. Military dictatorship
5. Royal dictatorship

Not all elections that occur when a regime is classified as a dictatorship (regime = 4-6) are dictatorial. This apparent anomaly has to do with the fact that a country's regime type is coded based on its status at the end of a given year. Elections like those in Argentina 1962, Nicaragua 1983, Philippines 1965, and Thailand 1976 all preceded a democratic collapse in the same year. Although these countries are considered dictatorial at the end of these years, we code these particular elections as democratic and therefore include them in our data set. We should note that we code the 1997 elections in Kenya, the 1999 elections in Guinea Bissau, the 2005 elections in Liberia, the 2006 elections in Mauritania, and the 2008 elections in Bangladesh as democratic even though Cheibub, Gandhi and Vreeland (2010) do not code these countries as democratic until the following year. The reason for this is that these elections are the primary reason cited by Cheibub, Gandhi and Vreeland (2010) for their eventual recoding of these countries as democratic. As an example, Cheibub, Gandhi and Vreeland (2010) do not code Liberia as democratic until 2006 despite the fact that presidential elections took place in October 2005, because the winner of these elections, Ellen Johnson-Sirleaf, did not officially take office until January 2006. The bottom line is that there are a few observations in our data set of democratic elections where regime indicates that the country was a dictatorship by the end of the year.

Growth Projections and Complexity Rankings V2

Each year, researchers at the Growth Lab of the Center for International Development release growth forecasts for the upcoming decade as well as rankings of countries by their current economic complexity. The Economic Complexity Index (ECI) is a measure of the amount of capabilities and know-how of a given country determined by the diversity, ubiquity, and complexity of the products it exports.

Growth projections are calculated through a process largely based on determining whether a country's economic complexity is higher or lower than expected given its level of income. We expect countries whose economic complexity is greater than we would expect for its level of income to grow faster than those that are "too rich" for their current level of complexity. In this data, a country's growth projection value for a given year is for the decade beginning with that year. For example, a value in a 2017 row is the projection of annualized growth for 2017-2027.

4.42.1 Economic Complexity Index (SITC product classification) (gpcr_eci)

The Economic Complexity Index (ECI) is a measure of the amount of capabilities and know-how of a given country determined by the diversity, ubiquity, and complexity of the products it exports.

A rank of countries based on how diversified and complex their export basket is. Countries that are home to a great diversity of productive know-how, particularly complex specialized know-how, are able to produce a great diversity of sophisticated products.

The complexity of a country's exports is found to highly predict current income levels, or where complexity exceed expectations for a country's income level, the country is predicted to experience more rapid growth in the future. ECI therefore provides a useful measure of economic development.

This Economic Complexity Index is computed using SITC product classification.

Min. Year:2017 Max. Year: 2017

Min. Year:1995 Max. Year: 2017
N: 34 n: 782 \bar{N} : 34 \bar{T} : 23

4.42.2 Forecasted annualized rate of growth for following decade (gpcr_growth)

A prediction of how much a country will grow based on its current level of Economic Complexity, its Complexity Outlook or connectedness to new complex products in the Product Space, as compared to its current income level in GDP per capita and expected natural resource exports.

Economic complexity alone helps explain the lion's share of variance in current income levels. But the value of economic complexity is in its predictive power on future growth, where a simple measure of current complexity and connectedness to new complex products, in relation to current income levels and expected natural resource exports, holds greater accuracy in predicting future growth than any other single economic indicator.

To calculate Economic Complexity Growth Projections, the authors consider four factors as explanatory variables: the Economic Complexity Index; the Complexity Outlook Index; the current level of income; and the expected growth in the value of natural resource exports per capita.

In effect, the growth projections show countries grow by expanding the know-how they have that allows them to produce more, and more complex products, depending on the connectedness of know-how and how many other products rely on similar capabilities, as well as the initial economic complexity the country held.

Growth projections are calculated through a process largely based on determining whether a country's economic complexity is higher or lower than expected given its level of income. The authors expect countries whose economic complexity is greater than the authors would expect for its level of income to grow faster than those that are "too rich" for their current level of complexity.

In this data, a country's growth projection value for a given year is for the decade beginning with that year. For example, a value in a 2017 row is the projection of annualized growth for 2017-2027.

Global Peace Index

The Global Peace Index (GPI), which ranks 163 independent states and territories according to their level of peacefulness. Produced by the Institute for Economics and Peace (IEP), the GPI is the world's leading measure of global peacefulness. The complete version of the GPI covers 99.7 per cent of the world's population, using 23 qualitative and quantitative indicators from highly respected sources, and measures the state of peace using three thematic domains: the level of Societal Safety and Security; the extent of Ongoing Domestic and International Conflict; and the degree of Militarisation. Please refer to the original source to see all of the indicators.

4.43.1 Ongoing Conflict (1-5 Higher intensity of conflict) (gpi_conf)

Ongoing Domestic and International Conflict (1 to 5, 5 refers to higher intensity of conflict) is one of the three subdomains of the GPI. It investigates the extent to which countries are involved in internal and external conflicts, as well as their role and duration of involvement in conflicts.

Min. Year:2018 Max. Year: 2018
N: 35

Min. Year:2008 Max. Year: 2019

N: 35

Min. Year:2008 Max. Year: 2019
N: 35 n: 420 \bar{N} : 35 \bar{T} : 12

4.43.3 Global Peace Index (1-5 Less peaceful) (gpi_gpi)

The GPI (Scaled 1 to 5, 5 being least peaceful) measures a country's level of Negative Peace using three domains of peacefulness. The first domain, Ongoing Domestic and International Conflict, investigates the extent to which countries are involved in internal and external conflicts, as well as their role and duration of involvement in conflicts.

The second domain evaluates the level of harmony or discord within a nation; ten indicators broadly assess what might be described as Societal Safety and Security. The assertion is that low crime rates, minimal terrorist activity and violent demonstrations, harmonious relations with neighbouring countries, a stable political scene and a small proportion of the population being internally displaced or made refugees can be equated with peacefulness.

Seven further indicators are related to a country's Militarisation-reflecting the link between a country's level of military build-up and access to weapons and its level of peacefulness, both domestically and internationally. Comparable data on military expenditure as a percentage of GDP and the number of armed service officers per head are gauged, as are financial contributions to UN peacekeeping missions.

Data used in the book "A Centripetal Theory of Democratic Governance" (Gerring, John and Thacker, Strom C, 2008).

4.44.1 Parliamentarism (gtm_parl)

The parliamentary/presidential distinction is conceptualized as a continuum with two dimensions: (a) the degree of separation (independence) between president and parliament (unity = parliamentary, separation = presidential) and, if there is any separation at all, (b) the relative power of the two players (the more power the president possesses, the more presidential is the resulting system). This complex reality is captured with a three-part coding scheme:

0. Presidential
1. Semi-presidential
2. Parliamentary

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1946 Max. Year: 2002
N: 38 n: 1548 \bar{N} : 27 \bar{T} : 41

4.44.2 Proportional Representation (gtm_pr)

The centripetal theory of democratic governance emphasizes the following three features of an electoral system: (a) district magnitude (M), (b) seat allocation rules (majoritarian or proportional), and (c) candidate selection rules. The centripetal ideal type is defined by $M > 1$, proportional seat allocation rules, and party-controlled candidate selection. This is the closed-list-PR electoral system. Other systems are ranked lower in this coding according to their deviation from this ideal type. Thus, the coding for the list-PR variable is as follows:

0. Majoritarian or Preferential-vote.
1. Mixed-member majority or Block vote.
2. Closed-list-PR.

N: N/A **Min. Year:** N/A **Max. Year:** N/A

Min. Year:1946 **Max. Year:** 2002
N: 38 **n:** 1548 \bar{N} : 27 \bar{T} : 41

4.44.3 Unitarism (gtm_unit)

Average of Nonfederalism and Nonbicameralism: Nonfederalism is coded as 0 = federal (elective regional legislatures plus conditional recognition of subnational authority), 1 = semifederal (where there are elective legislatures at the regional level but in which constitutional sovereignty is reserved to the national government), or 2 = non-federal. Nonbicameralism is coded as 0 = strong bicameral (upper house has some effective veto power; the two houses are incongruent), 1 = weak bicameral (upper house has some effective veto power, though not necessarily a formal veto; the two houses are congruent), or 2 = unicameral (no upper house or weak upper house).

N: N/A **Min. Year:** N/A **Max. Year:** N/A

Min. Year:1946 **Max. Year:** 2002

(Data downloaded: 2021-11-18)

Financing the State: Government Tax Revenue from 1800 to 2012

The Financing the State: Government Tax Revenue from 1800 to 2012 dataset provides information on the size and composition of government tax revenues for 31 countries in Europe and the Americas for the period from 1800 (or independence) to 2012. It provides a comprehensive picture of the sources of government funding starting with the establishment or independence of modern nation states in the early 19th century. The original dataset contains further information on sub-categories of direct and indirect taxes, such as revenues received through property, income, excise, consumption and custom taxes.

4.45.1 Share Direct Taxes in 1800 (gtr_centaxdir1800)

Share of total central government tax revenue from direct taxes, in the year 1800. A direct tax is imposed directly upon an individual person (legal or natural) or property, in contrast to a tax imposed upon a transaction. Direct taxes include taxes on income, property, and other direct taxes.

Min. Year:2018 Max. Year: 2018
N: 1

Min. Year:1955 Max. Year: 2021
N: 1 n: 67 \bar{N} : 1 \bar{T} : 67

4.45.2 Share Direct Taxes in 1850 (gtr_centaxdir1850)

Share of total central government tax revenue from direct taxes, in the year 1850. A direct tax is imposed directly upon an individual person (legal or natural) or property, in contrast to a tax imposed upon a transaction. Direct taxes include taxes on income, property, and other direct taxes.

4.46 Witold Henisz

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Henisz, W. J. (2017). The Political Constraint Index (POLCON) Dataset 2017 release. <https://mgmt.wharton.upenn.edu/profile/1327>

<https://mgmt.wharton.upenn.edu/profile/1327>
(Data downloaded: 2020-10-05)

Political Constraint Index (POLCON) Dataset

The measure of political constraints employed estimates the feasibility of policy change (the extent to which a change in the preferences of any one actor may lead to a change in government policy) using the following methodology. First, extracting data from political science databases, it identifies the number of independent branches of government (executive, lower and upper legislative chambers) with veto power over policy change. The preferences of each of these branches and the status quo policy are then assumed to be independently and identically drawn from a uniform, unidimensional policy space. This assumption allows for the derivation of a quantitative measure of institutional hazards using a simple spatial model of political interaction.

4.46.1 Alignment Executive/Legislative Chamber (lower) (h_align1)

Dummy variable indicating alignment between the executive and the lower legislative chamber, coded 1 when the party controlling the executive branch is either the largest party in the lower legislative chamber or is a member of a ruling coalition in that chamber.

Min. Year:2015 Max. Year: 2016
N: 36

Min. Year:1946 Max. Year: 2016
N: 38 n: 2091 \bar{N} : 29 \bar{T} : 55

4.46.2 Independent Sub-Federal Unit (h_f)

Dummy variable coded 1 if there are independent sub-federal units (states, provinces, regions etc.) that impose substantive constraints on national fiscal policy.

Min. Year:2016 Max. Year: 2016
N: 36

Min. Year:1960 Max. Year: 2016
N: 38 n: 1859 \bar{N} : 33 \bar{T} : 49

4.46.3 Independent Judiciary (h_j)

Dummy variable coded 1 if there is an independent judiciary (based on information from Polity's Executive Constraints, p_xconst) and - where available - on ICRG's index of Law & Order.

Min. Year:2016 Max. Year: 2016
N: 36

Min. Year:1960 Max. Year: 2016
N: 38 n: 1859 \bar{N} : 33 \bar{T} : 49

4.46.4 Legislative Chamber (h_l1)

Dummy variable coded 1 if there is an effective legislative chamber (based on information from Polity's Executive Constraints, p_xconst).

Min. Year:2016 Max. Year: 2016
N: 36

Min. Year:1946 Max. Year: 2016
N: 38 n: 2260 \bar{N} : 32 \bar{T} : 59

4.46.5 2nd Legislative Chamber (h_l2)

Dummy variable coded 1 if there is an effective second legislative chamber, namely, where h_l1=1 and records on the composition of a second chamber exist - where that chamber is elected under a distinct electoral system and has a substantive (not merely delaying) role in the implementation of fiscal policy.

Min. Year:2016 Max. Year: 2016
N: 36

Min. Year:1946 Max. Year: 2016
N: 38 n: 2260 \bar{N} : 32 \bar{T} : 59

4.46.6 Legislative Fractionalization (lower) (h_lflo)

Legislative fractionalization is approximately the probability that two random draws from the lower legislative chamber will be from different parties.

Min. Year:2016 Max. Year: 2016
N: 36

Min. Year:1946 Max. Year: 2016
N: 38 n: 2119 \bar{N} : 30 \bar{T} : 56

4.46.7 Political Constraints Index III (h_polcon3)

This index measures the feasibility of policy change, i.e. the extent to which a change in the preferences of any one political actor may lead to a change in government policy. The index is composed from the following information: the number of independent branches of government with veto power over policy change, counting the executive and the presence of an effective lower and upper house in the legislature (more branches leading to more constraint); the extent of party alignment across branches of government, measured as the extent to which the same party or coalition of parties control each branch (decreasing the level of constraint); and the extent of preference heterogeneity within each legislative branch, measured as legislative fractionalization in the relevant house (increasing constraint for aligned executives, decreasing it for opposed executives). The index scores are derived from a simple spatial model and theoretically ranges from 0 to 1, with higher scores indicating more political constraint and thus less feasibility of policy change. Note that the coding reflects information as of January 1 in any given year. Henisz (2002) uses this index to demonstrate that political environments that limit the feasibility of policy change are an important determinant of investment in infrastructure.

Min. Year:2016 Max. Year: 2016
N: 36

Min. Year:1946 Max. Year: 2016
N: 38 n: 2260 \bar{N} : 32 \bar{T} : 59

4.46.8 Political Constraints Index V (h_polcon5)

This index follows the same logic as Political Constraints Index III (h_polcon3) but also includes two additional veto points: the judiciary and sub-federal entities. Note that the coding reflects information as of January 1 in any given year. Henisz (2000) uses this index to measure the impact on cross-national growth rates of a government's ability to provide credible commitment.

Min. Year:2016 Max. Year: 2016
N: 36

Min. Year:1960 Max. Year: 2016
N: 38 n: 1859 \bar{N} : 33 \bar{T} : 49

4.47 Wahman, Teorell and Hadenius

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

(Data downloaded: 2021-11-18)

The Authoritarian Regime Dataset

The Authoritarian Regimes Dataset version 6.0 covers the time period 1972-2014 and includes all 192 nations recognized as members of the UN except the four micro states of Europe (Andorra, Liechtenstein, Monaco and San Marino) and two micro states in the Pacific that are not members of the World Bank (Nauru and Tuvalu).

4.47.1 Colonial Origin (ht_colonial)

This is a tenfold classification of the former colonial ruler of the country. Following Bernard et al. (2004), we have excluded the British settler colonies (the US, Canada, Australia, Israel and New Zealand), and exclusively focused on “Western overseas” colonialism. This implies that only Western colonizers (e.g. excluding Japanese colonialism), and only countries located in the non-Western hemisphere “overseas” (e.g. excluding Ireland & Malta), have been coded. Each country that has been colonized since 1700 is coded. In cases of several colonial powers, the last one is counted, if it lasted for 10 years or longer. The categories are the following:

0. Never colonized by a Western overseas colonial power
1. Dutch
2. Spanish
3. Italian
4. US
5. British
6. French
7. Portuguese
8. Belgian
9. British-French
10. Australian

Min. Year: 2018 Max. Year: 2018
N: 36

Min. Year: 1946 Max. Year: 2021
N: 38 n: 2531 \bar{N} : 33 \bar{T} : 67

4.47.2 Size of Largest Party in Legislature (in Fractions) (ht_partsz)

Counts the largest parties' number of seats divided by the legislative assemblies' total number of seats expressed in fractions. In countries with a two-chamber parliament the lower house is counted.

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1974 Max. Year: 2013
N: 37 n: 1288 \bar{N} : 32 \bar{T} : 35

4.47.3 The Region of the Country (ht_region)

This is a tenfold politico-geographic classification of world regions, based on a mixture of two considerations: geographical proximity (with the partial exception of category 5 below) and demarcation by area specialists having contributed to a regional understanding of democratization. The categories are as follow:

1. Eastern Europe and post Soviet Union (including Central Asia)
2. Latin America (including Cuba, Haiti & the Dominican Republic)
3. North Africa & the Middle East (including Israel, Turkey & Cyprus)
4. Sub-Saharan Africa
5. Western Europe and North America (including Australia & New Zealand)
6. East Asia (including Japan & Mongolia)
7. South-East Asia
8. South Asia
9. The Pacific (excluding Australia & New Zealand)
10. The Caribbean (including Belize, Guyana & Suriname, but excluding Cuba, Haiti & the Dominican Republic)

Min. Year:2018 Max. Year: 2018
N: 36

Min. Year:1946 Max. Year: 2021
N: 38 n: 2531 \bar{N} : 33 \bar{T} : 67

4.47.4 Regime Type (ht_regtype)

This typology of authoritarian regimes is based on a distinction between three modes of political power maintenance (probably the three most widely used throughout history): hereditary succession (lineage), corresponding to monarchies; the actual or threatened use of military force, corresponding to military regimes; and popular elections, designating electoral regimes. Among the latter we distinguish among no-party regimes (where all parties are prohibited), one-party regimes (where all but one party is prohibited), and limited multiparty regimes (where multiple parties are allowed but the system still does not pass as democratic); a subtype of these regimes where no parties are present, although not being prohibited, are coded as “partyless” regimes. A subtype of military regimes are coded “rebel regimes”, where a rebel movement has taken power by military means. We also code hybrids (or amalgams) combining elements from more than one regime type, as well as several minor types of regimes: “theocracies”, “transitional” regimes, “civil war”, foreign “occupation”, and a residual “other” category. Using the mean of the Freedom House and Polity scales (fh_ipolity2), the line between democracies and autocracies is drawn at 7.5. This threshold value was chosen by estimating the mean cutoff point separating democracy from autocracy in five well-known categorical measures

of democracy: those of Przeworski et al. (2000), Mainwaring et al. (2001), and Reich (2002), together with Freedom House's and Polity's own categorical thresholds for democracy.

1. Limited Multiparty
2. Partyless
3. No-Party
4. Military
5. Military No-Party
6. Military Multiparty
7. Military One-party
8. One-Party
9. Other
16. One-Party Monarchy
17. Monarchy
18. Rebel Regime
19. Civil War
20. Occupation
21. Theocracy
22. Transitional Regime
23. No-Party Monarchy
24. Multiparty Monarchy
25. Multiparty-Occupied
100. Democracy

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1972 Max. Year: 2014
N: 37 n: 1427 \bar{N} : 33 \bar{T} : 39

4.47.5 Regime Type (simplified) (ht_regtype1)

A simplified, collapsed version of ht_regtype, where all monarchical regimes with amalgams [ht_regtype =16, 17, 23 or 24] are treated as monarchies, all military regimes with sub-types and amalgams [ht_regtype=4, 5, 6, 7 or 18] are treated as military regimes, and multiparty regimes with sub-types are treated as multiparty regimes [ht_regtype=1 or 2]. Only pure noparty [ht_regtype=3] and one-party [ht_regtype=8] regimes are treated as no-party and one-party regimes, respectively. The minor types [ht_regtype=9, 19, 20, 21, 22 or 25] are treated as other.

1. Monarchy
2. Military
3. One party
4. Multi-party
9. No-party
99. Other
100. Democracy

Institutions and Elections Project Data

Institutions and Elections Project Data (version 2.0). The objective of the data from the Institutions and Elections Project (IAEP) is to describe the formal institutions that are in place, even if practice does not comport with those formal rules. The data refers to the situation January 1st each year. Note: According to the documentation of the data many of the cases “have more than one executive; [...] the executive referred to may be any one of the executives established in a country”. We urge users to refer to the documentation at the IAEP web site for information about which executive each particular case refers to.

Note: Changes from the original version: The dataset has two types of missing values, logical missing values and actual missing values. In the QoG data, logical missing values were recoded to actual missing values. To access data with logical missing values please use original dataset.

4.48.20 Electoral System (iaep_es)

What is the type of electoral system for legislative elections?

- 1. Plurality (First past the post)
- 2. Majority
- 3. Proportional representation
- 4. Mixed systems (combination of PR and either plurality or majority). This option includes situations in which a single chamber contains seats selected by different methods, or situations in which all of the seats in a chamber are chosen with the same method, but each chamber is selected through different methods.

4.49 International Country Risk Guide - The PRS Group

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

PRS Group et al. (2021). International country risk guide

<https://www.prsgroup.com/about-us/our-two-methodologies/icrg>
(Data downloaded: 2020-01-27)

ICRG Indicator of Quality of Government

ICRG collects political information and financial and economic data, converting these into risk points.

4.49.1 ICRG Indicator of Quality of Government (icrg_qog)

The mean value of the ICRG variables “Corruption”, “Law and Order” and “Bureaucracy Quality”, scaled 0-1. Higher values indicate higher quality of government.

Corruption (originally 6 points)

This is an assessment of corruption within the political system. Such corruption is a threat to foreign investment for several reasons: it distorts the economic and financial environment; it reduces the efficiency of government and business by enabling people to assume positions of power through patronage rather than ability; and, last but not least, it introduces an inherent instability into the political process. The most common form of corruption met directly by business is financial corruption in the form of demands for special payments and bribes connected with import and export licenses, exchange controls, tax assessments, police protection, or loans. Such corruption can make it difficult to conduct business effectively, and in some cases may force the withdrawal or withholding of an investment. Although the measure takes such corruption into account, it is more concerned with actual or potential corruption in the form of excessive patronage, nepotism, job reservations, “favor-for-favors”, secret party funding, and suspiciously close ties between politics and business. According to ICRG, these insidious sorts of corruption are potentially of much greater risk to foreign business in that they can lead to popular discontent, unrealistic and inefficient controls on the state economy, and encourage the development of the black market. The greatest risk in such corruption is that at some time it will become so overweening, or some major scandal will be suddenly revealed, so as to provoke a popular backlash, resulting in a fall or overthrow of the government, a major reorganizing or restructuring of the country’s political institutions, or, at worst, a breakdown in law and order, rendering the country ungovernable.

Law and order (originally 6 points)

Law and Order are assessed separately, with each sub-component comprising zero to three points. The Law sub-component is an assessment of the strength and impartiality of the legal system, while the Order sub-component is an assessment of popular observance of the law. Thus, a country can enjoy a high rating in terms of its judicial system, but a low rating if it suffers from a very high crime rate or if the law is routinely ignored without effective sanction (for example, widespread illegal strikes).

Bureaucracy Quality (originally 4 points)

The institutional strength and quality of the bureaucracy is another shock absorber that tends to minimize revisions of policy when governments change. Therefore, high points are given to countries where the bureaucracy has the strength and expertise to govern without drastic changes in policy or interruptions in government services. In these low-risk countries, the bureaucracy tends to be

somewhat autonomous from political pressure and to have an established mechanism for recruitment and training. Countries that lack the cushioning effect of a strong bureaucracy receive low points because a change in government tends to be traumatic in terms of policy formulation and day-to-day administrative functions.

4.50 International Centre for Tax and Development and UNU-WIDER

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

ICTD/UNU-WIDER. (2020). Government revenue dataset. <https://www.wider.unu.edu/project/government-revenue-dataset>

<https://www.wider.unu.edu/project/government-revenue-dataset>
(Data downloaded: 2021-11-26)

ICTD/UNU-WIDER Government Revenue Dataset

The GRD aims to present a complete picture of government revenue and tax trends over time and allows for analysis at the country, regional or cross-country level. Where possible, figures are expressed both inclusive and exclusive of natural resource revenues, which helps to overcome a major obstacle to cross-country comparisons in existing data sources.

4.50.1 Grants (ictd_grants)

Total grants received by the government.

Min. Year:2015 Max. Year: 2019
N: 36

Min. Year:1980 Max. Year: 2020
N: 37 n: 1267 \bar{N} : 31 \bar{T} : 34

4.50.2 Consolidated Non-Tax Revenue (ictd_nontax)

Total non-tax revenue, comprising data categorized as either “non-tax revenue” or “other revenue” depending on the underlying source. Includes revenue from both resource and non-resource sources.

Min. Year:2015 Max. Year: 2019
N: 36

Min. Year:1980 Max. Year: 2019
N: 36 n: 1049 \bar{N} : 26 \bar{T} : 29

4.50.3 Revenue (excluding social contributions) (ictd_revexsc)

Total government revenue, excluding social contributions.

Min. Year:2015 Max. Year: 2019
N: 36

Min. Year:1980 Max. Year: 2020
N: 36 n: 1071 \bar{N} : 26 \bar{T} : 30

4.50.4 Revenue (including social contributions) (ictd_revinsc)

Total government revenue including taxes, non-tax revenue, grants and social contributions.

Min. Year:2015 Max. Year: 2019
N: 36

Min. Year:1980 Max. Year: 2020
N: 36 n: 1075 \bar{N} : 26 \bar{T} : 30

4.50.5 Total Resource Revenue (ictd_revres)

Total natural resource revenues, including natural resource revenues reported as “tax revenue” or “non-tax revenue”. Natural resources are here defined as natural resources that include a significant component of economic rent, primarily from oil and mining activities.

Min. Year:2015 Max. Year: 2018
N: 33

Min. Year:1980 Max. Year: 2020
N: 34 n: 1008 \bar{N} : 25 \bar{T} : 30

4.50.6 Social Contributions (ictd_soccon)

Total social contributions.

Min. Year:2015 Max. Year: 2019
N: 36

Min. Year:1980 Max. Year: 2019
N: 37 n: 1350 \bar{N} : 34 \bar{T} : 36

4.50.7 Taxes on Corporations and Other Enterprises (ictd_taxcorp)

Total income and profit taxes on corporations, including taxes on resource firms.

Min. Year:2015 Max. Year: 2019
N: 36

Min. Year:1980 Max. Year: 2019
N: 37 n: 1292 \bar{N} : 32 \bar{T} : 35

4.50.8 Taxes (excluding social contributions) (ictd_taxesc)

Total tax revenue, excluding social contributions.

Min. Year:2015 Max. Year: 2018
N: 36

Min. Year:1980 Max. Year: 2019
N: 37 n: 1351 \bar{N} : 34 \bar{T} : 37

4.50.9 Taxes on Goods and Services (ictd_taxgs)

Total taxes on goods and services, which includes (but it not necessarily always equal to) sales taxes and excise taxes.

Min. Year:2015 Max. Year: 2019
N: 36

Min. Year:1980 Max. Year: 2019
N: 37 n: 1342 \bar{N} : 34 \bar{T} : 36

4.50.10 Taxes on Income, Profits, and Capital Gains (ictd_taxinc)

Total taxes on income, profits and capital gains, including taxes on natural resource firms. This figure is always exclusive of social contributions. The total value of Taxes on Income, Profits and Capital Gains may sometimes exceed the sum of Individuals and Corporations, due to revenues that are unallocated between the two.

Min. Year:2015 Max. Year: 2019
N: 36

Min. Year:1980 Max. Year: 2019
N: 37 n: 1342 \bar{N} : 34 \bar{T} : 36

4.50.11 Taxes on Individuals (ictd_taxind)

Total income, capital gains and profit taxes on individuals. This figure is always exclusive of resource revenues in available sources.

Min. Year:2015 Max. Year: 2019
N: 36

Min. Year:1980 Max. Year: 2019
N: 37 n: 1294 \bar{N} : 32 \bar{T} : 35

4.50.12 Indirect Taxes (ictd_taxindirect)

Total indirect taxes, including resource revenues. Includes taxes on goods and services, taxes on international trade and other taxes. Indirect may exceed the sum of Taxes on Goods and Services, Taxes on International Trade and Transactions and Other Taxes due to unallocated revenue not classified in any of these categories.

Min. Year:2015 Max. Year: 2019
N: 36

Min. Year:1980 Max. Year: 2019
N: 37 n: 1344 \bar{N} : 34 \bar{T} : 36

4.50.13 Taxes (including social contributions) (ictd_taxinsc)

Total tax revenue, including social contributions.

Min. Year:2015 Max. Year: 2019
N: 36

Min. Year:1980 Max. Year: 2019
N: 37 n: 1353 \bar{N} : 34 \bar{T} : 37

4.50.14 Non-resource Tax (excluding social contributions) (ictd_taxnresexsc)

Total non-resource tax revenue, excluding social contributions. Calculated as “Taxes excluding social contributions” minus “resource taxes”. This is the variable recommended for econometric analysis, as it is most complete and consistent across countries.

Min. Year:2015 Max. Year: 2019
N: 34

Min. Year:1980 Max. Year: 2019
N: 35 n: 1232 \bar{N} : 31 \bar{T} : 35

4.50.15 Non-resource Tax (including social contributions) (ictd_taxnresinsc)

Total non-resource tax revenue, including social contributions. Calculated as “Taxes including social contributions” minus “resource taxes”.

Min. Year:2015 Max. Year: 2019
N: 34

Min. Year:1980 Max. Year: 2019
N: 35 n: 1235 \bar{N} : 31 \bar{T} : 35

4.50.16 Other Taxes (ictd_taxother)

Total other taxes.

Min. Year:2015 Max. Year: 2019
N: 36

Min. Year:1980 Max. Year: 2020
N: 37 n: 1343 \bar{N} : 33 \bar{T} : 36

4.50.17 Taxes on Payroll and Workforce (ictd_taxpaywf)

Total taxes on payroll and workforce. This variable is entirely distinct from social contributions, though in underlying sources, social contributions are very occasionally reported as payroll taxes.

Min. Year:2015 Max. Year: 2019
N: 36

Min. Year:1980 Max. Year: 2019
N: 37 n: 1335 \bar{N} : 33 \bar{T} : 36

4.50.18 Taxes on Property (ictd_taxprop)

Total taxes on property.

Min. Year:2015 Max. Year: 2019
N: 34

Min. Year:1980 Max. Year: 2019
N: 37 n: 1303 \bar{N} : 33 \bar{T} : 35

4.50.19 Resource Taxes (ictd_taxres)

Component of reported tax revenue that is from natural resource sources, most often corporate taxation of resource firms.

Min. Year:2015 Max. Year: 2019
N: 34

Min. Year:1980 Max. Year: 2020
N: 35 n: 1259 \bar{N} : 31 \bar{T} : 36

4.50.20 Taxes on International Trade and Transactions (ictd_taxtrade)

Total taxes on international trade, including both import and export taxes. In some cases this figure may also include VAT collected at the border, where countries consistently report revenue in this way.

Min. Year:2015 Max. Year: 2019
N: 36

Min. Year:1980 Max. Year: 2019
N: 37 n: 1339 \bar{N} : 33 \bar{T} : 36

4.51 Institute for Democracy and Electoral Assistance

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

The International Institute for Democracy and Electoral Assistance. (2021a). Electoral system design database. <https://www.idea.int/data-tools/data/electoral-system-design>

<https://www.idea.int/data-tools/data/electoral-system-design>
(Data downloaded: 2021-11-22)

Electoral System Design

The Electoral System Design Database is comprised of various reviews of the electoral legislation of countries from around the world. The database research was sourced from national legal documents from different sources, including the official web portals of governments, regional organizations that work in the area of democracy and electoral processes, and research institutes specialized in the area of elections and politics in general.

4.51.1 Electoral System Family (ideaesd_esf)

Electoral System Family

1. Proportional Representation
2. Plurality/Majority
3. Plurality/Majority and Proportional Representation
4. Mixed
5. Transition
6. Other
7. Not Applicable

4.51.2 Electoral System for the National Legislature (ideaesd_esnl)

Electoral System for National Legislature:

1. List Proportional Representation (List PR)

Under a List Proportional Representation (List PR) system each party or grouping presents a list of candidates for a multi-member electoral district, the voters vote for a party, and parties receive seats in proportion to their overall share of the vote. In some (closed list) systems the winning candidates are taken from the lists in order of their position on the lists. If the lists are 'open' or 'free' the voters can influence the order of the candidates by marking individual preferences.

2. Block Vote (BV)

Block Vote is a plurality/majority system used in multi-member districts. Electors have as many votes as there are candidates to be elected. The candidates with the highest vote totals win the seats. Usually voters vote for candidates rather than parties and in most systems may use as many, or as few, of their votes as they wish.

3. First Past the Post (FPTP)

First Past The Post is the simplest form of plurality/majority electoral system. The winning candidate is the one who gains more votes than any other candidate, even if this is not an absolute majority of valid votes. The system uses single-member districts and the voters vote for candidates rather than political parties.

4. Two-Round System (TRS)

The Two-Round System is a plurality/majority system in which a second election is held if no candidate or party achieves a given level of votes, most commonly an absolute majority (50 per cent plus one), in the first election round. A Two-Round System may take a majority-plurality form-more than two candidates contest the second round and the one wins the highest number of votes in the second round is elected, regardless of whether they have won an absolute majority-or a majority run-off form-only the top two candidates in the first round contest the second round.

5. Mixed Member Proportional (MMP)

Mixed Member Proportional is a mixed system in which the choices expressed by the voters are used to elect representatives through two different systems-one List PR system and (usually) one plurality/majority system-where the List PR system compensates for the disproportionality in the results from the plurality/majority system.

6. Single Transferable Vote (STV)

The Single Transferable Vote is a preferential system in which the voter has one vote in a multi-member district and the candidates that surpass a specified quota of first preference votes are immediately elected. In successive counts, votes are redistributed from least successful candidates, who are eliminated, and votes surplus to the quota are redistributed from successful candidates, until sufficient candidates are declared elected. Voters normally vote for candidates rather than political parties, although a party-list option is possible.

7. Alternative Vote (AV)

The Alternative Vote is a preferential plurality/majority system used in single-member districts. Voters use numbers to mark their preferences on the ballot paper. A candidate who receives an absolute majority (50 per cent plus 1) of valid first preference votes is declared elected. If no candidate achieves an absolute majority of first preferences, the least successful candidates are eliminated and their votes reallocated according to their second preferences until one candidate has an absolute majority. Voters vote for candidates rather than political parties.

8. Single Non-Transferable Vote (SNTV)

Under the Single Non-Transferable Vote system voters cast a single vote in a multi-member district. The candidates with the highest vote totals are declared elected. Voters vote for candidates rather than political parties.

9. Two-Round System, Party Block Vote (TRS PBV)

Party Block Vote (PBV) is a plurality/majority system using multi-member districts in which voters cast a single party-centered vote for a party of choice, and do not choose between candidates. The party with the most votes will win every seat in the electoral district.

10. Limited Vote (LV)

Limited Vote is a candidate-centred electoral system used in multi-member districts in which electors have more than one vote, but fewer votes than there are candidates to be elected. The candidates with the highest vote totals win the seats.

11. First Past The Post, Party Block Vote (FPTP PBV)

12. First Past the Post, List Proportional Representation (FPTP List PR)
13. First Past the Post, Block Vote (FPTP BV)
14. First Past the Post, Party Block Vote, List Proportional Representation (FPTP PBV List PR)

15. Parallel

A Parallel System is a mixed system in which the choices expressed by the voters are used to elect representatives through two different systems-one List PR system and (usually) one plurality/majority system-but where no account is taken of the seats allocated under the first system in calculating the results in the second system.

16. In transition

17. Modified Borda Count (Modified BC)

Borda Count (BC) - A candidate-centred preferential system used in either single- or multimember districts in which voters use numbers to mark their preferences on the ballot paper and each preference marked is then assigned a value using equal steps. These are summed and the candidate(s) with the highest total(s) is/are declared elected.

18. Two-Round System, Party Block Vote, List Proportional Representation (TRS PBV List PR)

19. No direct elections.

4.51.3 Electoral System for the President (ideaesd_esp)

Electoral System for the President:

1. Two-Round System (TRS)

The Two-Round System is a plurality/majority system in which a second election is held if no candidate or party achieves a given level of votes, most commonly an absolute majority (50 per cent plus one), in the first election round. A Two-Round System may take a majority-plurality form-more than two candidates contest the second round and the one who wins the highest number of votes in the second round is elected, regardless of whether they have won an absolute majority-or a majority run-off form-only the top two candidates in the first round contest the second round.

2. First Past the Post (FPTP)

First Past The Post is the simplest form of plurality/majority electoral system. The winning candidate is the one who gains more votes than any other candidate, even if this is not an absolute majority of valid votes. The system uses single-member districts and the voters vote for candidates rather than political parties.

3. Supplementary Vote (SV)

Supplementary vote: Voters can rank up to three candidates, and if no candidate wins a majority in the first round of voting, second and third preferences from ballots whose first preference candidate has been eliminated are used to determine the winner.

4. Single Transferable Vote (STV)

The Single Transferable Vote is a preferential system in which the voter has one vote in a multi-member

district and the candidates that surpass a specified quota of first preference votes are immediately elected. In successive counts, votes are redistributed from least successful candidates, who are eliminated, and votes surplus to the quota are redistributed from successful candidates, until sufficient candidates are declared elected. Voters normally vote for candidates rather than political parties, although a party-list option is possible.

Voter Turnout Database

The Voter Turnout Database is the best resource for a wide array of statistics on voter turnout from around the world. It contains the most comprehensive global collection of voter turnout statistics from presidential and parliamentary elections since 1945. Always growing, the database also includes European Parliament elections, as presented by country using both the number of registered voters and voting age population as indicators, and in some cases the data includes statistics on spoiled ballot rate.

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Mungiu-Pippidi, A., Dadasov, R., Martinez-Kukutschka, R., Alvarado-Pachon, N., Dykes, V., Kossow, N., & Khaghaghordyan, A. (2019). Index of public integrity. <http://www.integrity-index.org>

<http://integrity-index.org/>
(Data downloaded: 2021-12-22)

Index of Public Integrity

The Index of Public Integrity (IPI) aims to capture a snapshot of this balance in 114 countries for which data is available. It is a composite index consisting of six components. For the 2015, 2017 and 2019 editions, the components were: administrative burden, trade openness, budget transparency for opportunities, and judicial independence, e-citizenship and freedom of the press for constraints.

Starting from the 2021 edition, administrative burden and trade openness have been replaced by administrative transparency and online services due to unavailable alternative data on the original components (based on the World Bank Doing Business project, which closed). Please see the page of the original source for more detailed information about the methodology of this index.

A more extensive explanation of the methodology and the original composition of the IPI can be found in the following peer-reviewed publication:

Measuring Control of Corruption by a New Index of Public Integrity - Mungiu-Pippidi, A., Dadaov, R. Measuring Control of Corruption by a New Index of Public Integrity. *European Journal on Criminal Policy Research* 22, 415-438 (2016).

4.54.1 Index of Public Integrity (overall) (ipi_ipi)

The Index of Public Integrity (IPI) aims to capture a snapshot of this balance in 114 countries for which data is available. It is a composite index consisting of six components. For the 2015, 2017 and 2019 editions, the components were: administrative burden, trade openness, budget transparency for opportunities, and judicial independence, e-citizenship and freedom of the press for constraints.

Starting from the 2021 edition, administrative burden and trade openness have been replaced by administrative transparency and online services, due to unavailable alternative data on the original components (based on the World Bank Doing Business project, which closed).. Below you will find an outline of the methodology behind the IPI, detailing recent changes.

A more extensive explanation of the methodology and the original composition of the IPI can be found in the following peer-reviewed publication:

(Data downloaded: 2021-11-11)

Electoral Systems and the Personal Vote

This database updates and expands the coding of electoral systems presented in Gaviria et al.'s (2003) Database of Particularism. Data now cover up to 180 countries from 1978-2005 and distinguish electoral systems by the degree to which electoral institutions create incentives for candidates to cultivate a personal vote - as described theoretically in Carey and Shugart (1995) and Gaviria et al. (2003) - including the amount of vote pooling among co-partisan candidates, the amount of parties' control over ballot access, and whether voters cast their votes for candidates or parties. The database also contains several variables that rank-order electoral systems by tier, distinguish mixed-member and other multi-tier electoral systems, capture district magnitude (in two ways), and record election years. Database created 2007. Database last updated 2010.

4.57.1 Party Control over Ballot (lower/only house) (jw_avgballot)

Country-level weighted averages of Party Control over Ballot - SMD (lower/only house) (jw_smdballot) and Party Control over Ballot - MMD (lower/only house) (jw_mmdballot), where the weights are the percentage of members that originate from each tier. This variable thus reflects the value of ballots for the average member sitting in the lower house. The ballot variables focus on the amount of party control over candidates' access to a competitive position on the ballot. The variables equal (in order of increasing personal vote incentives): (0) where parties control access to ballots as well as the order in which individuals will fill the seats that the party wins (closed list multi-member districts, open list multi-member districts with little or no de facto change in list order); (1) where parties control access to the ballot, but not the order in which candidates will receive seats (open lists where intra-party preference votes seem to have a significant influence on which candidates are selected, and single-member districts where parties control access to the list); (2) where there are few or no impediments to individual candidates' ability to appear on the ballot (single-member districts where parties do not control access, e.g. allowing independent candidates and/or use primaries to select candidates).

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1978 Max. Year: 2005
N: 36 n: 845 \bar{N} : 30 \bar{T} : 23

4.57.2 Sharing of Votes among Candidates (lower/only house) (jw_avgpool)

Country-level weighted averages of Sharing of Votes among Candidates - SMD (lower/only house) (jw_smdpool) and Sharing of Votes among Candidates - MMD (lower/only house) (jw_mmdpools), where the weights are the percentage of members that originate from each tier. This variable thus reflects the value of the pooling of votes for the average member sitting in the lower house. The Pool variables measure the extent to which votes among candidates from the same party are shared. The variables equal (in order of increasing personal vote incentives): (0) where pooling of votes occurs across all candidates in a party in a district; (1) where pooling of votes occurs across some, but not all, candidates in a party in a district, or, where there is vote pooling across all candidates in a party in a district, but where the average district accounts for 5% or less of a legislature's membership; (2) where no pooling of votes occurs across candidates in a party (including single-member districts).

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1978 Max. Year: 2005
N: 36 n: 845 \bar{N} : 30 \bar{T} : 23

4.57.3 Candidate or Party-specific Voting (lower/only house) (jw_avgvote)

Country-level weighted averages of Candidate- or Party-specific Voting - SMD (lower/only house) (jw_smdvote) and Candidate- or Party-specific Voting - MMD (lower/only house) (jw_mmdvote), where the weights are the percentage of members that originate from each tier. This variable thus reflects the value of votes for the average member sitting in the lower house. The Vote variables focus attention on the distinction between casting votes for either parties or individual candidates. The variables equal (in order of increasing personal vote incentives): (0) where voters have only one vote for a party; (1) where voters can vote for a party or a candidate (as in open lists), where voters have multiple votes for multiple candidates (as in runoff or single-transferable vote systems), or where votes for a party or candidate are observationally equivalent (as in single-member districts); (2) where voters have one vote for an individual candidate.

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1978 Max. Year: 2005
N: 36 n: 845 \bar{N} : 30 \bar{T} : 23

4.57.4 Bicameral System (jw_bicameral)

Equals 1 whenever a country has a bicameral legislature.

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1978 Max. Year: 2005
N: 37 n: 899 \bar{N} : 32 \bar{T} : 24

4.57.5 Dominant or Populous Tier (jw_domr)

This variable ranks countries in increasing order of incentives to cultivate a personal vote according to their most dominant or populous tier (or tier with the greater number of legislators). The variable varies from 1 to 13, corresponding to the thirteen positions in Carey & Shugart's (1995) ranking. For example, a country with a ranking of 1 would have a tier with the lowest possible rank of personal vote incentives, and that tier would account for the majority of the members in the assembly.

4.57.6 Year of Election (lower/only house) (jw_election)

Dummy variable, 1 if year of election to lower house.

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1978 Max. Year: 2005

N: 37 n: 860 \bar{N} : 31 \bar{T} : 23

4.57.7 Ballot Access for Independent Candidates (lower/only house) (jw_indy)

Equals 1 wherever independent candidates are legally allowed (even where the legal requirements are strict), and 0 otherwise. This complements the cases where the ballot variables above equal 1 or 2, since they are adjusted to capture de facto practice. jw_indy instead captures the de jure rules. A user could adjust the ballot variables above to be de jure if (s)he replaced values of 2 with values of 1 when jw_indy = 0. Refers to lower house elections. The ballot variables focus on the amount of party control over candidates' access to a competitive position on the ballot. The variables equal (in order of increasing personal vote incentives): (0) where parties control access to ballots as well as the order in which individuals will fill the seats that the party wins (closed list multi-member districts, open list multi-member districts with little or no de facto change in list order); (1) where parties control access to the ballot, but not the order in which candidates will receive seats (open lists where intra-party preference votes seem to have a significant influence on which candidates are selected, and single-member districts where parties control access to the list); (2) where there are few or no impediments to individual candidates' ability to appear on the ballot (single-member districts where parties do not control access, e.g. allowing independent candidates and/or use primaries to select candidates).

Min. Year:1978 Max. Year: 2005
N: 37 n: 867 \bar{N} : 31 \bar{T} : 23

4.57.10 Party Control over Ballot - MMD (lower/only house) (jw_mmdballot)

Ballot (coded as above) for multi-member district tiers in elections to the lower house. The ballot variables focus on the amount of party control over candidates' access to a competitive position on the ballot. The variables equal (in order of increasing personal vote incentives): (0) where parties control access to ballots as well as the order in which individuals will fill the seats that the party wins (closed list multi-member districts, open list multi-member districts with little or no de facto change in list order); (1) where parties control access to the ballot, but not the order in which candidates will receive seats (open lists where intra-party preference votes seem to have a significant influence on which candidates are selected, and single-member districts where parties control access to the list); (2) where there are few or no impediments to individual candidates' ability to appear on the ballot (single-member districts where parties do not control access, e.g. allowing independent candidates and/or use primaries to select candidates).

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 31 n: 686 \bar{N} : 25 \bar{T} : 22

4.57.11 Sharing of Votes among Candidates - MMD (lower/only house) (jw_mmdpool)

Pool for multi-member district tiers in elections to the lower house. The Pool variables measure the extent to which votes among candidates from the same party are shared. The variables equal (in order of increasing personal vote incentives): (0) where pooling of votes occurs across all candidates

in a party in a district; (1) where pooling of votes occurs across some, but not all, candidates in a party in a district, or, where there is vote pooling across all candidates in a party in a district, but where the average district accounts for 5% or less of a legislature's membership; (2) where no pooling of votes occurs across candidates in a party (including single-member districts).

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1978 Max. Year: 2005
N: 31 n: 686 \bar{N} : 25 \bar{T} : 22

4.57.12 Candidate or Party-specific Voting - MMD (lower/only house) (jw_mmdvote)

Vote for multi-member district tiers in elections to the lower house. The Vote variables focus attention on the distinction between casting votes for either parties or individual candidates. The variables equal (in order of increasing personal vote incentives): (0) where voters have only one vote for a party; (1) where voters can vote for a party or a candidate (as in open lists), where voters have multiple votes for multiple candidates (as in runoff or single-transferable vote systems), or where votes for a party or candidate are observationally equivalent (as in single-member districts); (2) where voters have one vote for an individual candidate.

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1978 Max. Year: 2005
N: 31 n: 686 \bar{N} : 25 \bar{T} : 22

4.57.13 Runoff Elections (jw_multiround)

The variable indicates whether there are run-off elections. These are usually for SMDs with absolute majority requirements. Where jw_multiround is equal to 1, voters have more than a single vote to cast, albeit votes occur on separate election days.

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1978 Max. Year: 2005
N: 35 n: 834 \bar{N} : 30 \bar{T} : 24

4.57.14 Multi Tier (lower/only house) (jw_multitier)

Indicates whether there are two or more tiers to the legislature.

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 36 n: 847 \bar{N} : 30 \bar{T} : 24

4.57.15 Single Party System (jw_oneparty)

Dummy variable, 1 if single-party system.

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 37 n: 896 \bar{N} : 32 \bar{T} : 24

4.57.16 Personalistic Tier (jw_persr)

This variable ranks countries in increasing order of incentives to cultivate a personal vote according to their more personalistic tier (or tier with the greater incentives to cultivate a personal vote). The variable varies from 1 to 13, corresponding to the thirteen positions in Carey & Shugart's (1995) ranking. For example, a country with a ranking of 13 would have a tier with the highest possible rank of incentives to cultivate a personal vote, although that tier may only account for a minority or small fraction of its members.

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 35 n: 818 \bar{N} : 29 \bar{T} : 23

4.57.17 Proportion Coded Legislators (lower/only house) (jw_propcoded)

Shows the proportion of total legislators (elected and non-elected) that are included in the database (i.e. those that are elected).

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 37 n: 897 \bar{N} : 32 \bar{T} : 24

4.57.18 Seats from Multi-Member Districts (lower/only house) (jw_propmmd)

Proportion of seats from Multi-Member District (lower/only house).

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 37 n: 867 \bar{N} : 31 \bar{T} : 23

4.57.19 Seats from a National District (lower/only house) (jw_propn)

The proportion of legislators that are elected via a national tier.

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 37 n: 889 \bar{N} : 32 \bar{T} : 24

4.57.20 Seats from Single-Member Districts (lower/only house) (jw_propsm)

Proportion of seats from Single-Member Districts.

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 37 n: 865 \bar{N} : 31 \bar{T} : 23

4.57.21 Rank Vote (lower/only house) (jw_rank)

Equals 1 in two circumstances: where voters may rank order candidates according to preference, or where citizens have multiple preference votes for multiple candidates, even if they may not specifically rank the candidates. Otherwise, jw_rank is equal to zero. Refers to lower house elections.

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1978 Max. Year: 2005
N: 33 n: 790 \bar{N} : 28 \bar{T} : 24

4.57.22 Tiervote (lower/only house) (jw_tiervote)

Equals 1 when citizens are given a separate vote for deputies in each legislative tier.

Institutional Quality Dataset

More than 30 established institutional indicators can be clustered into three homogeneous groups of formal institutions: legal, political and economic, which capture to a large extent the complete formal institutional environment of a country. The latent qualities of legal, political and economic institutions for every country in the world and for every year are calculated. On this basis, a legal, political and economic World Institutional Quality Ranking are proposed, through which one can follow whether a country is improving or worsening its relative institutional environment. The calculated latent institutional quality measures can be useful in further panel data applications and add to the usual practice of using simply one or another index of institutional quality to capture the institutional environment.

4.58.1 Cluster memberships based on means (kun_cluster)

Cluster membership based on means.

Luxembourg Income Study Database and the Luxembourg Wealth Study Database

LIS, formerly known as The Luxembourg Income Study, is a data archive and research center dedicated to cross-national analysis. LIS is home to two databases, the Luxembourg Income Study Database, and the Luxembourg Wealth Study Database. The Luxembourg Income Study Database (LIS), under constant expansion, is the largest available database of harmonised microdata collected from multiple countries over a period of decades. The newer Luxembourg Wealth Study Database (LWS), is the only cross-national wealth microdatabase in existence.

Hanson & Sigman's State Capacity Index

Data used in the article "Leviathan's Latent Dimensions: Measuring State Capacity for Comparative Political Research" (Hanson and Sigman, 2021). The authors identify three core dimensions of state capacity, develop the expectation that they are mutually supporting and interlinked, and estimate the state capacity using Bayesian latent variable analysis.

4.60.1 Hanson & Sigman State Capacity Index (lld_capacity)

Hanson and Sigman's State Capacity Estimate. Three dimensions of state capacity that their estimate relies on are extractive capacity, coercive capacity, and administrative capacity. The authors use Bayesian latent variable analysis to estimate state capacity at the conjunction of indicators related to these dimensions.

Maddison Project Database 2020

The Maddison Project Database provides information on comparative economic growth and income levels over the very long run. The 2020 version of this database covers 169 countries and the period up to 2018.

4.62.1 Real GDP per Capita (mad_gdppc)

Real GDP per capita in 2011 US dollars, multiple benchmarks.

Min. Year:2018 Max. Year: 2018
N: 36

Min. Year:1946 Max. Year: 2018
N: 38 n: 2321 \bar{N} : 32 \bar{T} : 61

4.63 Hyde and Marinov

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Hyde, S. D., & Marinov, N. (2012). Which elections can be lost? *Political Analysis*, 20(2), 191–201

(Data downloaded: 2021-10-28)

National Elections Across Democracy and Autocracy, Version 6

The National Elections across Democracy and Autocracy (NELDA) dataset provides detailed information on all election events from 1945-2020. To be included, elections must be for a national executive figure, such as a president, or for a national legislative body, such as a parliament, legislature, constituent assembly, or other directly elected representative bodies. In order for an election to be included, voters must directly elect the person or persons appearing on the ballot to the national post in question. Voting must also be direct, or by the people in the sense that mass voting takes place. Microstates are now included but were not part of NELDA Versions 1-4.

4.63.1 First Multiparty Election (nelda_fme)

This indicates when a newly independent country is having its first elections, when a country holds the first multiparty elections after a significant period of non-democratic rule, or when a country transitions from single-party elections to multiparty elections. Multiparty means that more than one party is allowed to contest the election, and that at least some of the parties are both nominally and effectively independent of the ruling actors.

Min. Year:2015 Max. Year: 2020
N: 36

Min. Year:1946 Max. Year: 2020
N: 38 n: 811 \bar{N} : 11 \bar{T} : 21

4.63.2 Media Bias before Election (nelda_mbbe)

If there were reports by either domestic or outside actors of media bias in favor of the incumbent or ruling party, it is coded as a “Yes”. In cases where the media is totally controlled by the government, and/or no opposition is allowed, the answer is “Yes”. It is possible that the answer is “No” even if the political system is tightly controlled.

Min. Year:2015 Max. Year: 2020
N: 36

Min. Year:1946 Max. Year: 2020
N: 38 n: 809 \bar{N} : 11 \bar{T} : 21

4.63.3 Was More Than One Party Legal (nelda_mtop)

This variable indicates whether multiple political parties were technically legal. The legalization of multiple parties need not necessarily mean the existence of a functioning opposition party, as there may be other non-legal barriers to the development of an opposition party. Similarly, a well organized opposition party may exist but may not be legal.

Min. Year:2015 Max. Year: 2020
N: 36

Min. Year:1946 Max. Year: 2020
N: 38 n: 811 \bar{N} : 11 \bar{T} : 21

4.63.4 Number of Elections, Total (nelda_noe)

The number of elections during the year (counting legislative, executive and constituent assembly elections).

Min. Year:2015 Max. Year: 2020
N: 36

Min. Year:1946 Max. Year: 2020
N: 38 n: 811 \bar{N} : 11 \bar{T} : 21

4.63.5 Number of Elections, Constituent Assembly (nelda_noea)

Number of constituent assembly elections during the year.

Min. Year:2015 Max. Year: 2020
N: 36

Min. Year:1946 Max. Year: 2020
N: 38 n: 811 \bar{N} : 11 \bar{T} : 21

4.63.6 Number of Elections, Executive (nelda_noee)

Number of executive elections during the year.

Min. Year:2015 Max. Year: 2020
N: 36

Min. Year:1946 Max. Year: 2020
N: 38 n: 811 \bar{N} : 11 \bar{T} : 21

4.63.7 Number of Elections, Legislative (nelda_noel)

Number of legislative elections during the year.

Min. Year:2015 Max. Year: 2020
N: 36

Min. Year:1946 Max. Year: 2020
N: 38 n: 811 \bar{N} : 11 \bar{T} : 21

4.63.8 Was Opposition Allowed (nelda_oa)

This variable indicates whether at least one opposition political party existed to contest the election. Some countries have multiple government parties but no opposition political party. An opposition party is one that is not in the government, meaning it is not affiliated with the incumbent party in power.

Min. Year:2015 Max. Year: 2020
N: 36

Min. Year:1946 Max. Year: 2020
N: 38 n: 811 \bar{N} : 11 \bar{T} : 21

4.63.9 Riots and Protests after Election (nelda_rpae)

If there are protests and riots after elections, a “Yes” is coded. The riots and protests should at least somewhat be related to the handling or outcome of the election.

Min. Year:2015 Max. Year: 2020
N: 36

Min. Year:1946 Max. Year: 2020
N: 38 n: 808 \bar{N} : 11 \bar{T} : 21

4.63.10 Violence and Civilian Deaths before Election (nelda_vcdbe)

If there was any significant violence relating to the elections that resulted in civilian deaths, a “Yes” is coded. These deaths should be at least plausibly related to the election, though sometimes it is

difficult to be certain. Deaths related to civil war that are not intended to influence the election, and are not caused by the election, should not be counted.

Min. Year:2015 Max. Year: 2020
N: 36

Min. Year:1946 Max. Year: 2020
N: 38 n: 809 \bar{N} : 11 \bar{T} : 21

4.64 Pippa Norris

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Democracy Time-series Data Release 3.0, January 2009

This dataset is in a country-year case format, suitable for cross-national time-series analysis. It contains data on the social, economic and political characteristics of 191 nations with over 600 variables from 1971 to 2007. In particular, it merges the indicators of democracy by Freedom House, Vanhanen, Polity IV, and Cheibub and Gandhi, selected institutional classifications and also socioeconomic indicators. Note that you should check the original codebook for the definition and measurement of each of the variables. The period for each series also varies. This is the replication dataset used in the book, *Driving Democracy*.

4.64.1 Classification of Executives (no_ce)

Classification of Executives:

(Data downloaded: 2021-12-20)

Natural Resource Management Index (NRMI) Data

The Natural Resource Protection and Child Health Indicators, 2020 Release, is produced in support of the U.S. Millennium Challenge Corporation as selection criteria for funding eligibility. The Natural Resource Protection Indicator (NRPI) and Child Health Indicator (CHI) are based on proximity-to-target scores ranging from 0 to 100 (at target). The NRPI covers 250 countries and is calculated based on the weighted average percentage of biomes under protected status. The CHI is a composite index for 194 countries derived from the average of three proximity-to-target scores for access to at least basic water and sanitation, along with child mortality. The 2020 release includes a consistent time series of NRPI scores for 2010 to 2020 and CHI scores for 2010 to 2019.

4.65.1 Natural Resource Protection Indicator (nrmi_nrpi)

Natural Resource Protection Indicator assesses whether a country is protecting at least 17% of all of its biomes (e.g. deserts, forests, grasslands, aquatic, and tundra). It is designed to capture the comprehensiveness of a government's commitment to habitat preservation and biodiversity protection. The World Wildlife Fund provides the underlying biome data, and the United Nations Environment Program World Conservation Monitoring Center provides the underlying data on protected areas.

4.66 Nunn and Puga

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Nunn, N., & Puga, D. (2012). Ruggedness: The blessing of bad geography in Africa. *Review of Economics and Statistics*, 94(1), 20–36

<http://diegopuga.org/data/rugged/>
(Data downloaded: 2021-09-29)

Country Ruggedness and Geographical Data (2012)

The dataset of terrain ruggedness and other geographical characteristics of countries was created by Nathan Nunn and Diego Puga for their article ‘Ruggedness: The blessing of bad geography in Africa’, published in the *Review of Economics and Statistics* 94(1), February 2012: 20-36.

4.66.1 Percentage of desert in 2012 (nunn_desert)

The percentage of the land surface area of each country covered by sandy desert, dunes, rocky or lava flows, was calculated on the basis of the desert layer of the Collins Bartholomew World Premium digital map data (Collins Bartholomew, 2005) and the country boundaries described above. This was initially computed as a cruder measure of soil (in)fertility for an early draft of the paper and is no longer used in the final version. Nunn and Puga have left it in the dataset in case it is of use to other researchers.

4.66.2 Average distance to nearest ice-free coast (1000 km) in 2012 (nunn_dist_coast)

Average distance to nearest ice-free coast (1000 km). To calculate the average distance to the closest ice-free coast in each country, Nunn and Puga first compute the distance to the nearest ice-free coast for every point in the country in equi-rectangular projection with standard parallels at 30 degrees, on the basis of sea and sea ice area features contained in the fifth edition of the Digital Chart of the World (US National Imagery and Mapping Agency, 2000) and the country boundaries described above. Then Nunn and Puga average this distance across all land in each country not covered by inland water features. Units are thousands of kilometres.

N: 36

N: N/A Min. Year: N/A Max. Year: N/A \bar{N} : N/A
 \bar{T} : N/A

4.66.3 Percentage within 100 km of ice-free coast in 2012 (nunn_near_coast)

Within 100 km of ice-free coast. On the basis of the same data used to calculate the average distance to nearest ice-free coast, Nunn and Puga calculate the percentage of the land surface area of each country that is within 100 km of the nearest ice-free coast.

Min. Year: 2015 Max. Year: 2015
N: 36

N: N/A Min. Year: N/A Max. Year: N/A \bar{N} : N/A
 \bar{T} : N/A

4.66.4 Ruggedness (Terrain Ruggedness Index, 100 m) in 2012 (nunn_rugged)

This is the Terrain Ruggedness Index originally devised by Riley, DeGloria, and Elliot (1999) to quantify topographic heterogeneity in wildlife habitats providing concealment for preys and lookout posts. The source of elevation data is GTOPO30 (US Geological Survey, 1996), a global elevation data set developed through a collaborative international effort led by staff at the US Geological Survey's Center for Earth Resources Observation and Science (EROS). Elevations in GTOPO30 are regularly spaced at 30 arc-seconds across the entire surface of the Earth on a map using a geographic projection, so the sea-level surface distance between two adjacent grid points on a meridian is half a nautical mile or, equivalently, 926 metres. After calculating the Terrain Ruggedness Index for each point on the grid, Nunn and Puga average across all grid cells in the country not covered by water to obtain the average terrain ruggedness of the country's land area. Since the sea-level surface that corresponds to a 30 by 30 arcsecond cell varies in proportion to the cosine of its latitude, when calculating the average terrain ruggedness or the average of any other variable for each country, Nunn and Puga weigh each cell by its latitude-varying sea-level surface. Nunn and Puga assign land to countries for this and other variables using digital boundary data based on the fifth edition of the Digital Chart of the World (US National Imagery and Mapping Agency, 2000), which they have updated to reflect 2000 country boundaries using information from the International Organization for Standardization ISO 3166 Maintenance Agency and other sources. Nunn and Puga exclude areas covered by permanent inland water area features contained in the same edition of the Digital Chart of the World. The units for the terrain ruggedness index correspond to the units used to measure elevation differences. In our calculation, ruggedness is measured in hundreds of metres of elevation difference for grid points 30 arc-seconds (926 metres on the equator or any meridian) apart.

4.66.5 Percentage of tropical climate in 2012 (nunn_tropical)

Tropical climate. Using detailed temperature and precipitation data from the Climatic Research Unit of the University of East Anglia and the Global Precipitation Climatology Centre of the German Nunn and Pugaather Service, Kottek, Grieser, Beck, Rudolf, and Rubel (2006) classify each cell on a 30 arc-minute grid covering the entire land area of the Earth into one of 31 climates in the widely-used Köppen-Geiger climate classification. Based on these data and the country boundaries described above, Nunn and Puga calculate the percentage of the land surface area of each country that has any of the four Köppen-Geiger tropical climates.

4.67 Organisation for Economic Co-operation and Development

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Organisation for Economic Co-operation and Development. (2021). Country statistical profiles: Key tables from OECD. <https://doi.org/10.1787/20752288>

<http://stats.oecd.org/#>
(Data downloaded: 2021-11-15)

Country Statistical Profiles

The Country Statistical Profiles database from the Organisation for Economic Cooperation and Development (OECD) includes a wide range of indicators on economy, education, energy, environment, foreign aid, health, information and communication, labour, migration, R&D, trade and society that better reflect key figures about the member states of the OECD. Historical data refer to the latest eight time periods.

Please note we have selected some of these variables for this version of the QoG Datasets. Find the full list of variables in the source's website.

The Ocean Health Index Data

The Ocean Health Index is a valuable tool for the ongoing assessment of ocean health. By providing a means to advance comprehensive ocean policy and compare future progress, the Index can inform decisions about how to use or protect marine ecosystems. The Index is a collaborative effort, made possible through contributions from more than 65 scientists/ocean experts and partnerships between organizations including the National Center for Ecological Analysis and Synthesis, Sea Around Us, Conservation International, National Geographic, and the New England Aquarium. The Index assesses the ocean based on 10 widely-held public goals for a healthy ocean. They are: Food Provision, Artisanal Fishing Opportunities, Natural Products, Carbon Storage, Coastal Protection, Sense of Place, Coastal Livelihoods & Economies, Tourism & Recreation, Clean Waters, Biodiversity.

4.68.1 The Ocean Health Index (ohi_ohi)

The Ocean Health Index establishes reference points for achieving ten widely accepted socio-ecological objectives, and scores the oceans adjacent to 171 countries and territories on how successfully they deliver these goals. Evaluated globally and by country, these ten public goals represent the wide range of benefits that a healthy ocean can provide; each country's overall score is the average of its respective goal scores. The ten socio-ecological objectives are: Food Provision, Artisanal Fishing Opportunities, Natural Products, Carbon Storage, Coastal Protection, Coastal Livelihoods & Economies, Tourism & Recreation, Sense of Place, Clean Waters, Biodiversity.

4.69 Marshall and Gurr

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Marshall, M. G., & Gurr, T. R. (2020). Polity v project, political regime characteristics and transitions, 1800-2018

<http://www.systemicpeace.org/inscrdata.html>
(Data downloaded: 2021-11-03)

Polity V Annual Time-Series, 1800-2018

The Polity project is one of the most widely used data resource for studying regime change and the effects of regime authority. The Polity5 dataset covers all major, independent states in the global system over the period 1800-2018 (i.e., states with a total population of 500,000 or more in the most recent year (167 countries in 2018). Please note that the codes -99, -88, -77 and -66 has been recoded to missing.

4.69.1 Regime Durability (p_durable)

Regime Durability: The number of years since the most recent regime change (defined by a three point change in the p_polity score over a period of three years or less) or the end of a transition period defined by the lack of stable political institutions (denoted by a standardized authority score). In calculating the p_durable value, the first year during which a new (post-change) polity is established is coded as the baseline “year zero” (value = 0) and each subsequent year adds one to the value of the p_durable variable consecutively until a new regime change or transition period occurs.

Min. Year:2015 Max. Year: 2018
N: 35

Min. Year:1946 Max. Year: 2018
N: 37 n: 2257 \bar{N} : 31 \bar{T} : 61

4.69.2 Revised Combined Polity Score (p_polity2)

Revised Combined Polity Score: The polity score is computed by subtracting the p_autoc score from the p_democ score; the resulting unified polity scale ranges from +10 (strongly democratic) to -10 (strongly autocratic). The revised version of the polity variable is designed to facilitate the use of the polity regime measure in time-series analyses. It modifies the combined annual polity score by applying a simple treatment, or “fix” to convert instances of “standardized authority scores” (i.e., -66, -77, and -88) to conventional polity scores (i.e., within the range, -10 to +10). The values have been converted according to the following rule set:

- (-66) Cases of foreign “interruption” are treated as “system missing.”
- (-77) Cases of “interregnum”, or anarchy, are converted to a “neutral” Polity score of “0.”
- (-88) Cases of “transition” are prorated across the span of the transition.

For example, country X has a p_polity score of -7 in 1957, followed by three years of -88 and,

finally, a score of +5 in 1961. The change (+12) would be prorated over the intervening three years at a rate of per year, so that the converted scores would be as follow: 1957 -7; 1958 -4; 1959 -1; 1960 +2; and 1961 +5.

Electoral Integrity Project (Version 7.0)

This dataset by the Electoral Integrity Project evaluates the quality of elections held around the world. Based on a rolling survey collecting the views of election experts, this research provides independent and reliable evidence to compare whether countries meet international standards of electoral integrity. PEI-7.0 cumulative release covers 336 national parliamentary and presidential contests held worldwide in 166 countries from 1 July 2012 to 31 December 2018.

4.70.1 Electoral Integrity Rating (pei_eir)

Overall how would you rate the integrity of this election on a scale from 1 (very poor) to 10 (very good)?

Min. Year: 2015 Max. Year: 2018

4.70.5 Perception of Electoral Integrity Index (pei_peii)

The PEI index is designed to provide an overall summary evaluation of expert perceptions that an election meets international standards and global norms. It is generated at the individual level using experts' answers to the 49 substantive variables below. Therefore, an Index score is missing if an expert does not answer a question. The 49 scores are summed and then standardized to a 100 point scale.

The Property Rights Protection Index

Over the last two decades, numerous studies have tried to quantify the effect of property rights on a wide range of societal outcomes, including growth, trade, and, to a lesser extent, inequality. However, a major limitation of these studies has been the data measuring property rights. These suffer from a number of shortcomings, including a lack of availability, focus, and objectivity.

Ouattara and Standaert address this gap by composing a new index of property rights that strictly focuses on the protection of these rights. As is common with indicators of governance, there is little to no objective data available that can be used to directly compare the security of property rights across countries. Instead, perception-based indicators such as survey-data or expert assessments are used to capture the opinion of a range of actors. The researchers' approach is to combine a data set of 18 such indicators from 7 different sources. The selection of an indicator depends on whether it directly measures the degree to which a country's laws protect private property rights and the degree to which its government enforces those laws, including the probability that private property is expropriated. By focusing on property rights alone, this allows the researchers to disentangle its effect from that of the overall quality of the judicial system and other aspects of the institutional framework. This ensures a better match between theoretical models and empirical tests on the effects of property rights.

This is done for as wide a group of countries and as long a time span as possible, increasing the index coverage by as much as 45% compared to other indexes - this index covers 191 countries cross twenty-year period between 1994 - 2014.

4.71.1 The Property Right Protection Index (prp_prp)

The Property Rights Index measures (the perception of) the security of property rights, separately from other aspects of the rule of law. It combines all publicly available information on the perception of the security of property rights (18 singular indicators of property rights).

(Data downloaded: 2021-11-17)

The QoG Expert Survey (2020 wave)

The Quality of Government Expert Survey (QoG Expert Survey) is a research project aimed at documenting the organizational design of public bureaucracies and bureaucratic behavior in countries around the world. The third wave of the QoG Expert Survey covers 117 countries and is based on a web survey of 996 experts.

The general purpose of the QoG Expert Survey is to measure the structure and behaviour of public administration across countries. The survey covers a variety of topics which are seen as relevant to the structure and functioning of the public administration according to the literature, but on which we lack quantitative indicators for a large number of countries. The QoG Expert Survey 2020 is the third wave of the QoG Expert Survey, following the first wave in 2008-2012 and the second wave in 2014.

The QoG Expert Survey 2020 produced ten country-level indicators, pertaining to bureaucratic structure (meritocratic recruitment, security of tenure, closedness) and bureaucratic behavior (political interference into day-to-day bureaucratic decision-making and impartiality). The data is based on the assessments of experts from 117 countries, carefully selected for their contextual subject-matter knowledge. The experts took part in the research pro bono. The main innovation of the third wave is the use of anchoring vignettes and Item-Response Theory (IRT)-based aggregation techniques to produce point estimates that account and adjust for systematic differences in expert subjective assessments and variation in expert reliability. The resulting indicators are internally coherent and also correlate well with other well-established measures for the same concepts. The strength of the association between the data from 2020 and the two previous waves of the survey suggests that the data is likely to measure the same underlying phenomena, while offering enough variability over time to be used in time-series analysis.

4.73.1 Entry at the lowest level only (qs20_close1)

Country-level estimate for Entry at the lowest level only, scaled between 0 and 1. Highest score refers to cases where entry to bureaucratic positions is possible at the lowest level of hierarchy only, and positions at middle and higher levels of hierarchy are filled by individuals from within the bureaucracy.

Min. Year: 2020 Max. Year: 2020

(Data downloaded: 2021-11-11)

Oil and Gas Data, 1932-2014

Global dataset of oil and natural gas production, prices, exports, and net exports. These data are based on the best available information about the volume and value of oil and natural gas production in all countries from 1932 to 2014. The volume figures are from the documents listed in the original source; to calculate the total value of production, the author multiplies the volume by the world price for oil or gas. Since these are world prices for a single (benchmark) type of oil/gas, they only approximate the actual price - which varies by country according to the quality, the terms of contracts, the timing of the transactions, and other factors. These figures do not tell how much revenues were collected by governments or companies - only the approximate volume and value of production. Data on oil production from 1946 to 1969, and gas production from 1955 (when it first was reported) to 1969, are from the US Geological Survey Minerals Yearbook, for various years.

4.76.1 Gas exports, billion cubic feet per year (ross_gas_exp)

Gas exports, billion cubic feet per year.

World Press Freedom

The Reporters Without Borders World Press Freedom Index ranks the performance of 180 countries according to a range of criteria that include media pluralism and independence, respect for the safety and freedom of journalists, and the legislative, institutional and infrastructural environment in which the media operate.

4.77.1 Press Freedom Index (rsf_pfi)

The Press Freedom index measures the amount of freedom journalists and the media have in each country and the efforts made by governments to see that press freedom is respected. It does not take account of all human rights violations, only those that affect press freedom. Neither is it an indicator of the quality of a country's media.

Note: With the exception of the year 2012 the index ranges between 0 (total press freedom) and 100 (no press freedom). However for the 2012 data release RSF changed the scale so that negative values can be and indeed are assigned to countries with more press freedom. We have decided leave the data as is.

Extended State History Index

The data set extends and replaces previous versions of the State Antiquity Index (originally created by Bockstette, Chanda and Putterman, 2002). The updated data extends the previous Statehist data into the years before 1 CE, to the first states in Mesopotamia (in the fourth millennium BCE), along with filling in the years 1951 - 2000 CE that were left out of past versions of the Statehist data.

The construction of the index follows the principles developed by Bockstette et al (2002). First, the duration of state existence is established for each territory defined by modern-day country borders. Second, this duration is divided into 50-year periods. For each half-century from the first period (state emergence) onwards, the authors assign scores to reflect three dimensions of state presence, based on the following questions: 1) Is there a government above the tribal level? 2) Is this government foreign or locally based? 3) How much of the territory of the modern country was ruled by this government?

Sustainable Governance Indicators

The Sustainable Governance Indicators (SGI) survey addresses one of the most pressing questions facing the highly developed states of the OECD and the European Union in the 21st century: How can we achieve sustainable policy outcomes while ensuring that policymaking processes remain focused on long-term goals? To answer this question, 41 countries of the OECD and the EU are assessed and compared on the basis of 157 quantitative and qualitative indicators. The qualitative assessment is carried out by more than 100 international experts from the academic community. These country reports are the result of a multiphase process of survey and validation. This allows successful examples of sustainable governance to be identified, along with corresponding policy and governance achievements. The instrument is based on three pillars: the Sustainable Policies Index, which measures the sustainability of policy outcomes; the Robust Democracy Index, which measures the quality of democracy; and the Good Governance Index, which explores the extent to which a country's institutional arrangements enhance the public sector's capacity to act (executive capacity) as well as the extent to which citizens, NGOs and other organizations are endowed with the participatory competence to hold government accountable to its actions (executive accountability).

4.79.11 Good Governance (sgi_go)

This pillar of the SGI examines the good governance capacities of a political system in terms of its executive capability and accountability. Sustainable governance is defined here as the political management of public affairs that adopts a long-term view of societal development, takes into account the interests of future generations, and facilitates capacities for social change.

The Governance index examines how effective governments are in directing and implementing policies appropriate to these three goals. As a measuring tool grounded in practical evidence, the Governance index draws on 37 qualitative indicators posed in an expert survey that measure a country's institutional arrangements against benchmarks of good practices in governance. Governance in this context implies both the capacity to act ("executive capacity") and the extent to which non-governmental actors and institutions are endowed with the participatory competence to hold the government accountable to its actions ("executive accountability"). This includes citizens, legislatures, parties, associations and the media, that is, actors that monitor the government's activities and whose effective inclusion in the political process improve the quality of governance.

The dimension of Executive Capacity draws on the categories of steering capability, policy implementation and institutional learning. Steering capability questions explore the roles of strategic planning and expert advice, the effectiveness of interministerial coordination and regulatory impact assessments, and the quality of consultation and communication policies. Questions about implementation assess the government's ability to ensure effective and efficient task delegation to ministers, agencies or subnational governments. Questions on institutional learning refer to a government's ability to reform its own institutional arrangements and improve its strategic orientation.

The dimension of Executive Accountability is comprised of three categories corresponding to actors or groups of actors considered to be important agents of oversight and accountability in theories of democracy and governance. The questions here are designed to examine the extent to which citizens are informed of government policies, whether the legislature is capable of evaluating and acting as a "check" on the executive branch, and whether intermediary organizations (i.e., media, parties, interest associations) demonstrate relevance and policy know-how in exercising oversight. This approach is based on a dynamic understanding of governance in which power and authority is dispersed throughout the institutions, processes and structures of government. In order to account for the diversity of institutional arrangements, the index explicitly considers functional equivalencies in different countries, and pays equal attention to formal and informal as well as hierarchical and non-hierarchical institutional arrangements.

4.79.14 Sustainable Policies (sgi_pp)

This pillar of the SGI examines each country's sustainable policy performance in terms of three dimensions of sustainable development. If the goal of politics is to promote sustainable development, and if citizens are to be empowered to live their lives in accordance with their own individual talents, then governments must be able to establish and maintain the social, economic and environmental conditions for such well-being and empowerment. The conditions for social progress must be generated by suitable outcomes in certain policy fields. Such outcomes are examined by the Policy Performance pillar, which is comprised of 16 policy fields grouped in terms of economic, social and environmental sustainability. Each policy field is addressed by a qualitative assessment and additional quantitative data. The point here is to examine domestic policymaking as well as the extent to which governments actively contribute to the provision of global public goods. The areas examined are:

1. Economic Policies: economy, labor markets, taxes, budgets, research and innovation, global financial system.
2. Social Policies: education, social inclusion, health, families, pensions, integration policy, safe living conditions, global inequalities.
3. Environmental Policies: environment policy, global environmental protection.

4.79.15 Robust Democracy (sgi_qd)

This pillar of the SGI examines the quality of democracy in each country. From the perspective of long-term system stability and political performance, the quality of democracy and political participation are crucial aspects of a society's success. The stability and performance of a political system depends in large part upon the assent and confidence of its citizens. Democratic participation and oversight are also essential to genuine learning and adaptation processes, and to the ability to change. In this sense, guaranteeing opportunities for democratic participation and oversight, as well as the presence of due process and respect for civil rights, are fundamental prerequisites for the legitimacy of a political system. The quality of democracy in each country is measured against a definitional norm that considers issues relating to participation rights, electoral competition, access to information and the rule of law. Given that all OECD and EU member states constitute democracies, the questions posed here focus on the quality rather than the presence of democracy. Individual indicators monitor the following criteria:

1. Electoral processes.
2. Access to information.
3. Civil rights and political liberties.
4. Rule of law.

4.79.20 Robust Democracy: Rule of Law - Corruption Prevention (sgi_qdrlc)

Robust Democracy: Rule of Law - Corruption Prevention. To what extent are public officeholders prevented from abusing their position for private interests? This question addresses how the state and society prevent public servants and politicians from accepting bribes by applying mechanisms to guarantee the integrity of officeholders: auditing of state spending; regulation of party financing; citizen and media access to information; accountability of officeholders (asset declarations, conflict of interest rules, codes of conduct); transparent public procurement systems; effective prosecution of corruption. (1, 2): Public officeholders can exploit their offices for private gain as they see fit without fear of legal consequences or adverse publicity. (3, 4, 5): Some integrity mechanisms function, but do not effectively prevent public officeholders from abusing their positions. (6, 7, 8): Most integrity mechanisms function effectively and provide disincentives for public officeholders willing to abuse their positions. (9, 10): Legal, political and public integrity mechanisms effectively prevent public officeholders from abusing their positions.

Shadow Economies: Model Based estimates (2012)

The authors use a two-sector dynamic general equilibrium model; they developed an approach to estimate the size of the shadow economy. Compared to the methods used in the current literature, this approach overcomes three main issues. First, it does not rely on ad-hoc econometric specifications and assumptions. Second, as it does not estimate the size of the shadow economy using statistical methods, it does not include statistical errors. Finally, as opposed to the currently existing methods, it does not lack micro-foundations.

<https://www.socialprogress.org/index/global>
(Data downloaded: 2021-10-06)

Social Progress Index

The Social Progress Index (SPI) is a well-established measure, published since 2013, that is meant to catalyze improvement and drive action by presenting social outcome data in a useful and reliable way. The 2020 Social Progress Index ranks 163 countries on social progress. It combines 50 social and environmental outcome indicators to calculate an overall score for these countries, based on tiered levels of scoring that include measures in health, safety, education, technology, rights, and more. In addition to the overall scores, three broad dimensions of social progress are also measured: Basic Human Needs, Foundations of Wellbeing, and Opportunity. It also considers the data of 30 additional countries, calculating component and dimension scores when enough data are available. In all, the SPI measures at least some aspects of social progress across more than 99.85% of the world's population.

4.81.1 Basic Human Needs (SPI) (spi_bn)

Basic Human Needs is one of the three components of the SPI, which are used to calculate the overall Social Progress Index. It assesses a population's capacity to survive with adequate nourishment and basic medical care, clean water, sanitation, adequate shelter, and personal safety.

Min. Year:2018 Max. Year: 2018
N: 36

Min. Year:2010 Max. Year: 2019
N: 36 n: 360 \bar{N} : 36 \bar{T} : 10

4.81.2 Foundations of Wellbeing (SPI) (spi_fob)

Foundations of Wellbeing is one of the three components of the SPI, which are used to calculate the overall Social Progress Index. It highlights the extent to which a country's residents can gain a basic education, obtain information and communicate freely, benefit from a modern healthcare system, and live in a healthy environment conducive to a long life.

Min. Year:2018 Max. Year: 2018
N: 36

Min. Year:2010 Max. Year: 2019
N: 36 n: 360 \bar{N} : 36 \bar{T} : 10

4.81.3 Opportunity (SPI) (spi_opp)

Opportunity is one of the three components of the SPI, which are used to calculate the overall Social Progress Index. Indicators on personal rights, personal freedom and choice, inclusiveness, and access to advanced education are used to assess the level of opportunity.

The Societal Violence Scale

The Societal Violence Scale seeks to develop measures of societal violence based on annual US State Department's Human Rights reports. The Societal Violence Scale ranks countries on a 5-point scale (from the lowest level of societal violence to the highest) based on three criteria. First, the authors look at the scope: the proportion of society that is victimized. Thus, widespread violence against women (who account for 50 percent of the population) figures more heavily in the final score than widespread abuses against human rights defenders, who represent a very small number. The authors also look at the severity of abuses. For example, evidence that human rights defenders are killed weighs more heavily than beatings of human rights defenders. Likewise, while women are routinely subjected to sexual violence and domestic violence, the addition of other types of violence against women like gang rape, sex trafficking, and/or FGM/C adds to the assessment of severity.

4.82.1 Societal Violence Scale Index 1-5 (svs_ind)

The Societal Violence Scale is coded on a 5-point scale where:

- 1 Societal violence is limited in scope and severity, with relatively few victims and few perpetrators.
- 2 Societal violence is a problem, affecting a significant number of victims, albeit across few victim categories and of a less severe nature.
- 3 Societal violence is widespread and serious in nature. It affects a significant number of people across several victim categories.
- 4 Societal violence is pervasive in scope, severe in nature, assumes a variety of forms and affects a large proportion of the population typically across several victim categories and perpetrators.
- 5 Societal violence is ubiquitous in scope, egregious in nature and assumes a variety of forms. It affects a large proportion of the population, commonly crossing numerous victim groups and perpetrators.

(Data downloaded: 2022-01-25)

Corruption Perceptions Index

The CPI focuses on corruption in the public sector and defines corruption as the abuse of public office for private gain. The surveys used in compiling the CPI tend to ask questions in line with the misuse of public power for private benefit, with a focus, for example, on bribe-taking by public officials in public procurement. The sources do not distinguish between administrative and political corruption. The CPI Score relates to perceptions of the degree of corruption as seen by business people, risk analysts and the general public and ranges between 100 (highly clean) and 0 (highly corrupt).

Note: The time-series information in the CPI scores can only be used if interpreted with caution. Year-to-year shifts in a country's score can result not only from a changing perception of a country's performance but also from a changing sample and methodology. That is, with differing respondents and slightly differing methodologies, a change in a country's score may also relate to the fact that different viewpoints have been collected and different questions have been asked. Moreover, each country's CPI score is composed as a 3-year moving average, implying that if changes occur they only gradually affect a country's score. For a more detailed discussion of comparability over time in the CPI, see Lambsdorff 2005.

Note: In 2012 TI changed the methodology for which the data is not comparable and only data from 2012 can be compared.

Also, the observation "Belgium/Luxembourg" from the 1995 data has been dropped.

World Inequality Database

Built to accompany the publishing of the two books *Top Incomes: a Global Perspective* (2010, Oxford University Press) and *Top Incomes over the XX Century* (2007, Oxford University Press), the World Top Incomes Database offers the most comprehensive set of historical series on income inequality available so far. In the 2010 book, the authors analyze the long term evolution of top incomes in 12 new countries (after the 10 initial countries analyzed in the 2007 book).

4.84.1 Top 10% income share (top_top10_income_share)

Income share of the top 10% of the population. This refers to the share of pre-tax national income among equal-split adults for the top 10% in each country-year.

The pre-tax national income is the sum of all pre-tax personal income flows accruing to the owners of the production factors, labor and capital, before taking into account the operation of the tax/transfer system, but after taking into account the operation of pension system.

The central difference between personal factor income and pre-tax income is the treatment of pensions, which are counted on a contribution basis by factor income and on a distribution basis by pre-tax income. The population is comprised of individuals over age 20. The base unit is the individual (rather than the household) but resources are split equally within couples.

Min. Year: 2018 Max. Year: 2018
N: 36

Unified Democracy Scores

The Unified Democracy Scores (UDS) now covers the time period 1946-2012. These scores incorporate recent updates to three of the ten original measures - Freedom House (2014), Polity IV (Marshall et al., 2012), and Van Hanen (2012) - that feature in the analysis that the authors report in their 2010 article. In addition, the current release adds a recently developed measure of democracy - Economist Intelligence Unit (2012) - to its framework.

(Data downloaded: 2021-11-29)

Human Development Report

The Human Development Report (HDR) is an annual report published by the Human Development Report Office of the United Nations Development Programme (UNDP).

The entire series of Human Development Index (HDI) values and rankings are recalculated every year using the most recent (revised) data and functional forms. The HDI rankings and values in the 2014 Human Development Report cannot therefore be compared directly to indices published in previous Reports. Please see hdr.undp.org for more information.

The HDI was created to emphasize that people and their capabilities should be the ultimate criteria for assessing the development of a country, not economic growth alone. The HDI can also be used to question national policy choices, asking how two countries with the same level of GNI per capita can end up with different human development outcomes.

4.87.1 Human Development Index (`undp_hdi`)

The HDI was created to emphasize that people and their capabilities should be the ultimate criteria for assessing the development of a country, not economic growth alone. The HDI can also be used to question national policy choices, asking how two countries with the same level of GNI per capita can end up with different human development outcomes. These contrasts can stimulate debate about government policy priorities.

The Human Development Index (HDI) is a summary measure of average achievement in key dimensions of human development: a long and healthy life, being knowledgeable and having a decent standard of living. The HDI is the geometric mean of normalized indices for each of the three dimensions.

The health dimension is assessed by life expectancy at birth, the education dimension is measured by mean of years of schooling for adults aged 25 years and more and expected years of schooling for children of school entering age. The standard of living dimension is measured by gross national income per capita. The HDI uses the logarithm of income, to reflect the diminishing importance of income with increasing GNI. The scores for the three HDI dimension indices are then aggregated into a composite index using geometric mean. Refer to Technical notes for more details.

The HDI simplifies and captures only part of what human development entails. It does not reflect on inequalities, poverty, human security, empowerment, etc. The HDRO offers the other composite indices as broader proxy on some of the key issues of human development, inequality, gender disparity and human poverty.

4.88.13 Official entrance age to upper secondary education (years) (une_oeaus)

Official entrance age to upper secondary education (years). Age at which students would enter a given programme or level of education assuming they start at the official entrance age for the lowest level of education, study full-time throughout and progressed through the system without repeating or skipping a grade. The theoretical entrance age to a given programme or level is typically, but not always, the most common entrance age.

https://services.fsd.tuni.fi/catalogue/FSD1289?lang=en&study_language=en
(Data downloaded: 2020-11-15)

Measures of Democracy 1810-2018

The data contain three different variables, created by Tatu Vanhanen. The variables in question are political competition, political participation and the index of democratization.

4.89.1 Competition (`van_comp`)

The competition variable portrays the electoral success of smaller parties, that is, the percentage of votes gained by the smaller parties in parliamentary and/or presidential elections. The variable is calculated by subtracting from 100 the percentage of votes won by the largest party (the party which wins most votes) in parliamentary elections or by the party of the successful candidate in presidential elections. Depending on their importance, either parliamentary or presidential elections are used in the calculation of the variable, or both elections are used, with weights. If information on the distribution of votes is not available, or if the distribution does not portray the reality accurately, the distribution of parliamentary seats is used instead. If parliament members are elected but political parties are not allowed to take part in elections, it is assumed that one party has taken all votes or seats. In countries where parties are not banned but yet only independent candidates participate in elections, it is assumed that the share of the largest party is not over 30 percent.

Min. Year:2017 Max. Year: 2018
N: 36

Min. Year:1946 Max. Year: 2018
N: 38 n: 2332 \bar{N} : 32 \bar{T} : 61

4.89.2 Index of Democratization (`van_index`)

The index of democratization is formed by multiplying the competition and the participation variables and then dividing the outcome by 100.

Min. Year:2017 Max. Year: 2018
N: 36

Min. Year:1946 Max. Year: 2018
N: 38 n: 2332 \bar{N} : 32 \bar{T} : 61

4.89.3 Participation (van_part)

The political participation variable portrays the voting turnout in each election, and is calculated as the percentage of the total population who actually voted in the election. In the case of indirect elections, only votes cast in the final election are taken into account. If electors have not been elected by citizens, only the number of actual electors is taken into account, which means that the degree of participation drops to the value 0. If an election to choose electors has been held, the participation variable is calculated from the number and distribution of votes in that election. National referendums raise the variable value by five percent and state (regional) referendums by one percent for the year they are held. Referendums can add the degree of participation at maximum by 30 percent a year. The value of the combined degree of participation cannot be higher than 70 percent, even in cases where the sum of participation and referendums would be higher than 70.

<https://v-dem.net/en/data/>
(Data downloaded: 2021-10-04)

Varieties of Democracy Dataset version 11.1

Varieties of Democracy (V-Dem) is a new approach to conceptualizing and measuring democracy. It provides a multidimensional and disaggregated dataset that reflects the complexity of the concept of democracy as a system of rule that goes beyond the simple presence of elections. The V-Dem project distinguishes between five high-level principles of democracy: electoral, liberal, participatory, deliberative, and egalitarian, and collects data to measure these principles.

4.90.1 Academic Freedom Index (vdem_academ)

Academic freedom index. To what extent is academic freedom respected?

Clarifications: Academic freedom is understood as the right of academics, without constriction by prescribed doctrine, to freedom of teaching and discussion, freedom in carrying out research and disseminating and publishing the results thereof, freedom to express freely their opinion about the institution or system in which they work, freedom from institutional censorship and freedom to participate in professional or representative academic bodies (UNESCO 1997 Recommendation concerning the Status of Higher-Education Teaching Personnel). The Academic Freedom Index is designed to provide an aggregated measure that captures the de facto realization of academic freedom, including the degree to which higher-education institutions are autonomous. Aggregation: The index is formed by point estimates drawn from a Bayesian factor analysis model including the following indicators: freedom to research and teach, freedom of academic exchange and dissemination, institutional autonomy, campus integrity, freedom of academic and cultural expression.

Min. Year:2018 **Max. Year:** 2018
N: 36

Min. Year:1946 **Max. Year:** 2020
N: 38 **n:** 2337 **\bar{N} :** 31 **\bar{T} :** 62

4.90.2 Political corruption index (vdem_corr)

Political corruption. Question: How pervasive is political corruption?

Clarification: The directionality of the V-Dem corruption index runs from less corrupt to more corrupt (unlike the other V-Dem variables that generally run from less democratic to more democratic situation). The corruption index includes measures of six distinct types of corruption that cover both different areas and levels of the polity realm, distinguishing between executive, legislative and judicial corruption. Within the executive realm, the measures also distinguish between corruption mostly pertaining to bribery and corruption due to embezzlement. Finally, they differentiate between corruption in the highest echelons of the executive (at the level of the rulers/cabinet) on the one hand, and in the public sector at large on the other. The measures thus tap into several distinguished types of corruption: both 'petty' and 'grand'; both bribery and theft; both corruption aimed and influencing law making and that affecting implementation. Aggregation: The index is arrived at by taking the average of (a) public sector corruption index; (b) executive corruption index; (c) the indicator for legislative corruption; and (d) the indicator for judicial corruption. In other words, these four different government spheres are weighted equally in the resulting index. V-Dem replaces missing values for countries with no legislature by only taking the average of (a), (b) and (d).

Min. Year:2018 Max. Year: 2018
N: 36

Min. Year:1946 Max. Year: 2020
N: 38 n: 2405 \bar{N} : 32 \bar{T} : 63

4.90.3 Deliberative democracy index (vdem_delibdem)

Deliberative democracy index. Question: To what extent is the ideal of deliberative democracy achieved?

Clarification: The deliberative principle of democracy focuses on the process by which decisions are reached in a polity. A deliberative process is one in which public reasoning focused on the common good motivates political decisions - as contrasted with emotional appeals, solidary attachments, parochial interests, or coercion. According to this principle, democracy requires more than an aggregation of existing preferences. There should also be respectful dialogue at all levels - from preference formation to final decision - among informed and competent participants who are open to persuasion. To make it a measure of not only the deliberative principle but also of democracy, the index also takes the level of electoral democracy into account.

Min. Year:2018 Max. Year: 2018
N: 36

Min. Year:1946 Max. Year: 2020
N: 38 n: 2405 \bar{N} : 32 \bar{T} : 63

4.90.4 Deliberative component index (vdem_dl_delib)

Deliberative component index. Question: To what extent is the deliberative principle of democracy achieved?

Clarification: The deliberative principle of democracy focuses on the process by which decisions are reached in a polity. A deliberative process is one in which public reasoning focused on the common good motivates political decisions - as contrasted with emotional appeals, solidary attachments, parochial interests, or coercion. According to this principle, democracy requires more than an aggregation of existing preferences. There should also be respectful dialogue at all levels - from preference formation to final decision - among informed and competent participants who are open to persuasion. To measure these features of a polity, we try to determine the extent to which political elites give public justifications for their positions on matters of public policy, justify their positions in terms of the public good, acknowledge and respect counter-arguments; and how wide the range of consultation is at elite levels. Aggregation: The index is formed by point estimates drawn from a Bayesian factor analysis model including the following indicators: reasoned justification, common good justification, respect for counterarguments, range of consultation, and engaged society.

Min. Year:2018 Max. Year: 2018
N: 36

Min. Year:1946 Max. Year: 2020
N: 38 n: 2405 \bar{N} : 32 \bar{T} : 63

4.90.5 Electoral component index (vdem_edcomp_thick)

Electoral component index. Question: To what extent is the electoral principle of democracy achieved?

Clarifications: The electoral principle of democracy seeks to achieve responsiveness and accountability between leaders and citizens through the mechanism of competitive elections. This is presumed to be achieved when suffrage is extensive; political and civil society organizations can operate freely; elections are clean and not marred by fraud or systematic irregularities; and the chief executive of a country is selected directly or indirectly through elections. Aggregation: The electoral component index is operationalized as a chain defined by its weakest link of freedom of association, suffrage, clean elections, and elected executive.

Min. Year:2018 Max. Year: 2018
N: 36

Min. Year:1946 Max. Year: 2020
N: 38 n: 2405 \bar{N} : 32 \bar{T} : 63

4.90.6 Egalitarian component index (vdem_egal)

Egalitarian component index. Question: To what extent is the egalitarian principle achieved?

Clarifications: The egalitarian principle of democracy holds that material and immaterial inequalities inhibit the exercise of formal rights and liberties, and diminish the ability of citizens from all social groups to participate. Egalitarian democracy is achieved when 1) rights and freedoms of individuals are protected equally across all social groups; 2) resources are distributed equally across all social groups; and 3) access to power is equally distributed by gender, socioeconomic class and social group. Aggregation: This index is formed by averaging the following indices: equal protection index and equal distribution of resources.

Min. Year:2018 Max. Year: 2018
N: 36

Min. Year:1946 Max. Year: 2020
N: 38 n: 2405 \bar{N} : 32 \bar{T} : 63

4.90.7 Egalitarian democracy index (vdem_egaldem)

Egalitarian democracy index. Question: To what extent is the ideal of egalitarian democracy achieved?

Clarifications: The egalitarian principle of democracy holds that material and immaterial inequalities inhibit the exercise of formal rights and liberties, and diminish the ability of citizens from all social groups to participate. Egalitarian democracy is achieved when 1) rights and freedoms of individuals are protected equally across all social groups; and 2) resources are distributed equally across all social groups. The distribution of resources must be sufficient to ensure that citizens' basic needs are met in a way that enables their meaningful participation. Additionally, an equal distribution of resources ensures the potential for greater equality in the distribution of power. To make it a measure of egalitarian democracy, the index also takes the level of electoral democracy into account.

Min. Year:2018 Max. Year: 2018
N: 36

Min. Year:1946 Max. Year: 2020
N: 38 n: 2405 \bar{N} : 32 \bar{T} : 63

4.90.8 Election vote buying (vdem_elvotbuy)

Election vote buying. Question: In this national election, was there evidence of vote and/or turnout buying?

Clarification: Vote and turnout buying refers to the distribution of money or gifts to individuals, families, or small groups in order to influence their decision to vote/not vote or whom to vote for. It does not include legislation targeted at specific constituencies, i.e., "porkbarrel" legislation. V-Dem uses a specifically designed measurement model to provide country-year point estimates, aggregated from multiple codings submitted by country experts by taking disagreement and measurement error into account. In this version of the variable, used in the QoG dataset, V-Dem has linearly translated the measurement model point estimates back to the original ordinal scale of each variable as an interval measure.

Min. Year:2015 Max. Year: 2020
N: 36

Min. Year:1946 Max. Year: 2020
N: 38 n: 782 \bar{N} : 10 \bar{T} : 21

4.90.9 Executive bribery and corrupt exchanges (vdem_exbribe)

Executive bribery and corrupt exchanges. Question: How routinely do members of the executive (the head of state, the head of government, and cabinet ministers), or their agents, grant favors in exchange for bribes, kickbacks, or other material inducements? V-Dem uses a specifically designed measurement model to provide country-year point estimates, aggregated from multiple codings submitted by country experts by taking disagreement and measurement error into account. In this version of the variable, used in the QoG dataset, V-Dem has linearly translated the measurement model point estimates back to the original ordinal scale of each variable as an interval measure.

4.90.10 Public sector corrupt exchanges (vdem_excrtps)

Public sector corrupt exchanges. Question: How routinely do public sector employees grant favors in exchange for bribes, kickbacks, or other material inducements?

Clarification: When responding to this question, we would like you to think about a typical person employed by the public sector, excluding the military. If you think there are large discrepancies between branches of the public sector, between the national/federal and subnational/state level, or between the core bureaucracy and employees working with public service delivery, please try to average them out before stating your response. V-Dem uses a specifically designed measurement model to provide country-year point estimates, aggregated from multiple codings submitted by country experts by taking disagreement and measurement error into account. In this version of the variable, used in the QoG dataset, V-Dem has linearly translated the measurement model point estimates back to the original ordinal scale of each variable as an interval measure.

4.90.11 Executive corruption index (vdem_execorr)

Executive corruption index. Question: How routinely do members of the executive, or their agents grant favors in exchange for bribes, kickbacks, or other material inducements, and how often do they steal, embezzle, or misappropriate public funds or other state resources for personal or family use?

Clarification: The directionality of the V-Dem corruption index runs from less corrupt to more corrupt (unlike the other V-Dem variables that generally run from less democratic to more democratic situation). Aggregation: The index is formed by taking the average of the point estimates from a Bayesian factor analysis model of the indicators for executive bribery and executive embezzlement.

Min. Year:2018 Max. Year: 2018
N: 36

Min. Year:1946 Max. Year: 2020
N: 38 n: 2405 \bar{N} : 32 \bar{T} : 63

4.90.12 Executive embezzlement and theft (vdem_exembez)

Executive embezzlement and theft. Question: How often do members of the executive (the head of state, the head of government, and cabinet ministers), or their agents, steal, embezzle, or misappropriate public funds or other state resources for personal or family use? V-Dem uses a specifically designed measurement model to provide country-year point estimates, aggregated from multiple codings submitted by country experts by taking disagreement and measurement error into account. In this version of the variable, used in the QoG dataset, V-Dem has linearly translated the measurement model point estimates back to the original ordinal scale of each variable as an interval measure.

Min. Year:2018 Max. Year: 2018

4.90.13 Public sector theft (vdem_exthftps)

Public sector theft. Question: How often do public sector employees steal, embezzle, or misappropriate public funds or other state resources for personal or family use?

Clarification: When responding to this question, we would like to you think about a typical person employed by the public sector, excluding the military. If you think there are large discrepancies between branches of the public sector, between the national/federal and subnational/state level, or between the core bureaucracy and employees working with public service delivery, please try to average them out before stating your response. Scale: ordinal, converted to interval by the measurement model.

Min. Year:2018 Max. Year: 2018
N: 36

Min. Year:1946 Max. Year: 2020
N: 38 n: 2405 \bar{N} : 32 \bar{T} : 63

4.90.14 Legislature corrupt activities (vdem_gcrprt)

Legislature corrupt activities. Do members of the legislature abuse their position for financial gain?

Clarification: This includes any of the following: (a) accepting bribes, (b) helping to obtain government contracts for firms that the legislator (or his/her family/friends/political supporters) own, (c) doing favors for firms in exchange for the opportunity of employment after leaving the legislature, (d) stealing money from the state or from campaign donations for personal use. V-Dem uses a specifically designed measurement model to provide country-year point estimates, aggregated from

multiple codings submitted by country experts by taking disagreement and measurement error into account. In this version of the variable, used in the QoG dataset, V-Dem has linearly translated the measurement model point estimates back to the original ordinal scale of each variable as an interval measure.

Min. Year:2018 **Max. Year:** 2018
N: 36

Min. Year:1946 **Max. Year:** 2020
N: 38 **n:** 2376 \bar{N} : 32 \bar{T} : 63

4.90.15 Women political empowerment index (vdem_gender)

Women political empowerment index. Question: How politically empowered are women?

Clarifications: Women's political empowerment is defined as a process of increasing capacity for women, leading to greater choice, agency, and participation in societal decision-making. It is understood to incorporate three equally-weighted dimensions: fundamental civil liberties, women's open discussion of political issues and participation in civil society organizations, and the descriptive representation of women in formal political positions. Aggregation: The index is formed by taking the average of women's civil liberties index, women's civil society participation index, and women's political participation index.

Min. Year:2018 **Max. Year:** 2018
N: 36

Min. Year:1946 **Max. Year:** 2020
N: 38 **n:** 2404 \bar{N} : 32 \bar{T} : 63

4.90.16 Judicial corruption decision (vdem_jucorrdc)

Judicial corruption decision. Question: How often do individuals or businesses make undocumented extra payments or bribes in order to speed up or delay the process or to obtain a favorable judicial decision? V-Dem uses a specifically designed measurement model to provide country-year point estimates, aggregated from multiple codings submitted by country experts by taking disagreement and measurement error into account. In this version of the variable, used in the QoG dataset, V-Dem has linearly translated the measurement model point estimates back to the original ordinal scale of each variable as an interval measure.

Min. Year:2018 **Max. Year:** 2018

4.90.17 Liberal democracy index (vdem_libdem)

Liberal democracy index. Question: To what extent is the ideal of liberal democracy achieved?
 Clarifications: The liberal principle of democracy emphasizes the importance of protecting individual

and minority rights against the tyranny of the state and the tyranny of the majority. The liberal model takes a "negative" view of political power insofar as it judges the quality of democracy by the limits placed on government. This is achieved by constitutionally protected civil liberties, strong rule of law, an independent judiciary, and effective checks and balances that, together, limit the exercise of executive power. To make this a measure of liberal democracy, the index also takes the level of electoral democracy into account.

Min. Year:2018 Max. Year: 2018
N: 36

Min. Year:1946 Max. Year: 2020
N: 38 n: 2405 \bar{N} : 32 \bar{T} : 63

4.90.18 Liberal component index (vdem_liberal)

Liberal component index. Question: To what extent is the liberal principle of democracy achieved?

Clarification: The liberal principle of democracy emphasizes the importance of protecting individual and minority rights against the tyranny of the state and the tyranny of the majority. The liberal model takes a "negative" view of political power insofar as it judges the quality of democracy by the limits placed on government. This is achieved by constitutionally protected civil liberties, strong rule of law, an independent judiciary, and effective checks and balances that, together, limit the exercise of executive power. Aggregation: This index is formed by averaging the following indices: equality before the law and individual liberties, judicial constraints on the executive, and legislative constraints on the executive.

Min. Year:2018 Max. Year: 2018
N: 36

Min. Year:1946 Max. Year: 2020
N: 38 n: 2405 \bar{N} : 32 \bar{T} : 63

4.90.19 Media corrupt (vdem_mecorrpt)

Media corrupt. Question: Do journalists, publishers, or broadcasters accept payments in exchange for altering news coverage? V-Dem uses a specifically designed measurement model to provide country-year point estimates, aggregated from multiple codings submitted by country experts by taking disagreement and measurement error into account. In this version of the variable, used in the QoG dataset, V-Dem has linearly translated the measurement model point estimates back to the original ordinal scale of each variable as an interval measure.

Min. Year:2018 Max. Year: 2018

Min. Year:1946 Max. Year: 2020
N: 38 n: 2405 \bar{N} : 32 \bar{T} : 63

4.90.20 Participatory component index (vdem_partip)

Participatory component index. Question: To what extent is the participatory principle achieved?

Clarification: The participatory principle of democracy emphasizes active participation by citizens in all political processes, electoral and non-electoral. It is motivated by uneasiness about a bedrock practice of electoral democracy: delegating authority to representatives. Thus, direct rule by citizens is preferred, wherever practicable. This model of democracy thus takes suffrage for granted, emphasizing engagement in civil society organizations, direct democracy, and subnational elected bodies. Aggregation: This index is formed by averaging the following indices: civil society participation, direct popular vote, elected local government power, and elected regional government power.

Min. Year: 2018 Max. Year: 2018
N: 36

Min. Year: 1946 Max. Year: 2020
N: 38 n: 2405 \bar{N} : 32 \bar{T} : 63

4.90.21 Participatory democracy index (vdem_partipdem)

Participatory democracy index. Question: To what extent is the ideal of participatory democracy achieved?

Clarifications: The participatory principle of democracy emphasizes active participation by citizens in all political processes, electoral and non-electoral. It is motivated by uneasiness about a bedrock practice of electoral democracy: delegating authority to representatives. Thus, direct rule by citizens is preferred, wherever practicable. This model of democracy thus takes suffrage for granted, emphasizing engagement in civil society organizations, direct democracy, and subnational elected bodies. To make it a measure of participatory democracy, the index also takes the level of electoral democracy into account.

Min. Year: 1946 Max. Year: 2020
N: 38 n: 2405 \bar{N} : 32 \bar{T} : 63

4.90.22 Electoral democracy index (vdem_polyarchy)

Electoral democracy index. Question: To what extent is the ideal of electoral democracy in its fullest sense achieved?

Clarifications: The electoral principle of democracy seeks to embody the core value of making rulers responsive to citizens, achieved through electoral competition for the electorate's approval under circumstances when suffrage is extensive; political and civil society organizations can operate freely; elections are clean and not marred by fraud or systematic irregularities; and elections affect the composition of the chief executive of the country. In between elections, there is freedom of expression and an independent media capable of presenting alternative views on matters of political relevance. In the V-Dem conceptual scheme, electoral democracy is understood as an essential element of any other conception of (representative) democracy - liberal, participatory, deliberative, egalitarian, or some other. Aggregation: The index is formed by taking the average of, on the one hand, the sum of

the indices measuring freedom of association (thick), suffrage, clean elections, elected executive (de jure) and freedom of expression; and, on the other, the five-way interaction between those indices. This is half way between a straight average and strict multiplication, meaning the average of the two. It is thus a compromise between the two most well known aggregation formulas in the literature, both allowing “compensation” in one sub-component for lack of polyarchy in the others, but also punishing countries not strong in one sub-component according to the “weakest link” argument. The aggregation is done at the level of Dahl’s sub-components (with the one exception of the non-electoral component).

Min. Year:2018 Max. Year: 2018
N: 36

Min. Year:1946 Max. Year: 2020
N: 38 n: 2405 \bar{N} : 32 \bar{T} : 63

4.90.23 Public sector corruption index (vdem_pubcorr)

Public sector corruption index. Question: To what extent do public sector employees grant favors in exchange for bribes, kickbacks, or other material inducements, and how often do they steal, embezzle, or misappropriate public funds or other state resources for personal or family use?

Clarification: The directionality of the V-Dem corruption index runs from less corrupt to more corrupt (unlike the other V-Dem variables that generally run from less democratic to more democratic situation). Aggregation: The index is formed by taking the average of the point estimates from a Bayesian factor analysis model of the indicators for public sector bribery and embezzlement.

Global Terrorism Index

The Global Terrorism Index (GTI) is a comprehensive study which accounts for the direct and indirect impact of terrorism in 162 countries in terms of its effect on lives lost, injuries, property damage and the psychological after-effects of terrorism. This study covers 99.6 per cent of the world's population. It aggregates the most authoritative data source on terrorism today, the Global Terrorism Database (GTD) collated by the National Consortium for the Study of Terrorism and Responses to Terrorism (START) into a composite score in order to provide an ordinal ranking of nations on the negative impact of terrorism. The GTD is unique in that it consists of systematically and comprehensively coded data on domestic as well as international terrorist incidents and now includes more than 140,000 cases.

(Data downloaded: 2021-10-04)

The Worldwide Governance Indicators

Governance consists of the traditions and institutions by which authority in a country is exercised. This includes the process by which governments are selected, monitored and replaced; the capacity of the government to effectively formulate and implement sound policies; and the respect of citizens and the state for the institutions that govern economic and social interactions among them.

The Worldwide Governance Indicators report on six broad dimensions of governance for over 200 countries and territories over the period 1996-2020:

- Voice and Accountability
- Political Stability and Absence of Violence/Terrorism
- Government Effectiveness
- Regulatory Quality
- Rule of Law
- Control of Corruption

The Worldwide Governance Indicators (WGI) are a research dataset summarizing the views on the quality of governance provided by a large number of enterprise, citizen and expert survey respondents in industrial and developing countries. These data are gathered from a number of survey institutes, think tanks, non-governmental organizations, international organizations, and private sector firms. The WGI do not reflect the official views of the Natural Resource Governance Institute, the Brookings Institutions, the World Bank, its Executive Directors, or the countries they represent. The WGI are not used by the World Bank Group to allocate resources.

4.92.1 Control of Corruption, Estimate (wbgi__cce)

Control of Corruption - Estimate: “Control of Corruption” measures perceptions of corruption, conventionally defined as the exercise of public power for private gain. The particular aspect of corruption measured by the various sources differs somewhat, ranging from the frequency of “additional payments to get things done”, to the effects of corruption on the business environment, to measuring “grand corruption” in the political arena or in the tendency of elite forms to engage in “state capture”.

4.92.4 Government Effectiveness, Estimate (wbgi_gee)

Government Effectiveness - Estimate: “Government Effectiveness” combines into a single grouping responses on the quality of public service provision, the quality of the bureaucracy, the competence of civil servants, the independence of the civil service from political pressures, and the credibility of the government’s commitment to policies. The main focus of this index is on “inputs” required for the government to be able to produce and implement good policies and deliver public goods.

4.93.12 Proportion of people living below 50 percent of median income (%) (wdi_belmedinc)

The percentage of people in the population who live in households whose per capita income or consumption is below half of the median income or consumption per capita. The median is measured at 2011 Purchasing Power Parity (PPP) using PovcalNet (<http://iresearch.worldbank.org/PovcalNet>). For some countries, medians are not reported due to grouped and/or confidential data. The reference year is the year in which the underlying household survey data was collected. In cases for which the data collection period bridged two calendar years, the first year in which data were collected is reported.

4.93.16 Fixed broadband subscriptions (per 100 people) (wdi_broadb)

Fixed broadband subscriptions refers to fixed subscriptions to high-speed access to the public Internet (a TCP/IP connection), at downstream speeds equal to, or greater than, 256 kbit/s. This includes cable modem, DSL, fiber-to-the-home/building, other fixed (wired)-broadband subscriptions, satellite broadband and terrestrial fixed wireless broadband. This total is measured irrespective of the method of payment. It excludes subscriptions that have access to data communications (including the Internet) via mobile-cellular networks. It should include fixed WiMAX and any other fixed wireless technologies. It includes both residential subscriptions and subscriptions for organizations.

4.93.56 Employment in services, male (% of male employment) (modeled ILO) (wdi_ - empserm)

Male employment in services (% of male employment). Employment is defined as persons of working age who were engaged in any activity to produce goods or provide services for pay or profit, whether at work during the reference period or not at work due to temporary absence from a job, or to working-time arrangement. The services sector consists of wholesale and retail trade and restaurants and hotels; transport, storage, and communications; financing, insurance, real estate, and business services; and community, social, and personal services, in accordance with divisions 6-9 (ISIC 2) or categories G-Q (ISIC 3) or categories G-U (ISIC 4). Modeled ILO estimate.

4.93.57 Energy imports, net (% of energy use) (wdi_ - eneimp)

Net energy imports are estimated as energy use less production, both measured in oil equivalents. A negative value indicates that the country is a net exporter. Energy use refers to use of primary energy before transformation to other end-use fuels, which is equal to indigenous production plus imports and stock changes, minus exports and fuels supplied to ships and aircraft engaged in international transport.

4.93.60 Ease of doing business index (1=most business-friendly regulations) (wdi_eodb)

Ease of doing business ranks economies from 1 to 189, with first place being the best. A high ranking (a low numerical rank) means that the regulatory environment is conducive to business operation. The index averages the country's percentile rankings on 10 topics covered in the World Bank's Doing Business. The ranking on each topic is the simple average of the percentile rankings on its component indicators.

N: 36 n: 1116 \bar{N} : 23 \bar{T} : 31

4.93.62 Government expenditure on education, total (% of government expenditure) (wdi_expeduge)

Total general (local, regional and central) government expenditure on education (current, capital, and transfers), expressed as a percentage of total general government expenditure on all sectors (including health, education, social services, etc.). It includes expenditure funded by transfers from international sources to government. Public education expenditure includes spending by local/municipal, regional and national governments (excluding household contributions) on educational institutions (both public and private), education administration, and subsidies for private entities (students/households and other private entities). In some instances data on total public expenditure on education refers only to the ministry of education and can exclude other ministries that spend a part of their budget on educational activities. The indicator is calculated by dividing total public expenditure on education incurred by all government agencies/departments by the total government expenditure and multiplying by 100. For more information, consult the UNESCO Institute of Statistics website: <http://www.uis.unesco.org/Education/>

4.93.63 Expenditure on primary education (% of government expenditure on edu.) (wdi_expedup)

Expenditure on Primary education, expressed as a percentage of total general government expenditure on education. Divide government expenditure on a given level of education (ex. primary, secondary) by total government expenditure on education (all levels combined), and multiply by 100. A high percentage of government expenditure on education spent on a given level denotes a high priority given to that level compared to others. When interpreting this indicator, one should take into account enrollment at that level, and the relative costs per student between different levels of education. 4.93.66 Military expenditure (% of GDP) (wdi_expmil)

Military expenditure (% of GDP). Military expenditures data from SIPRI are derived from the NATO definition, which includes all current and capital expenditures on the armed forces, including peacekeeping forces; defense ministries and other government agencies engaged in defense projects; paramilitary forces, if these are judged to be trained and equipped for military operations; and military space activities. Such expenditures include military and civil personnel, including retirement pensions of military personnel and social services for personnel; operation and maintenance; procurement; military research and development; and military aid (in the military expenditures of the donor country). Excluded are civil defense and current expenditures for previous military activities, such as for veterans' benefits, demobilization, conversion, and destruction of weapons. This definition cannot be applied for all countries, however, since that would require much more detailed information than is available about what is included in military budgets and off-budget military expenditure items. (For example, military budgets might or might not cover civil defense, reserves and auxiliary forces, police and paramilitary forces, dual-purpose forces such as military and civilian police, military grants in kind, pensions for military personnel, and social security contributions paid by one part of government to another).

4.93.100 Gini index (World Bank estimate) (wdi_gini)

Gini index measures the extent to which the distribution of income (or, in some cases, consumption expenditure) among individuals or households within an economy deviates from a perfectly equal distribution. A Lorenz curve plots the cumulative percentages of total income received against the cumulative number of recipients, starting with the poorest individual or household. The Gini index measures the area between the Lorenz curve and a hypothetical line of absolute equality, expressed as a percentage of the maximum area under the line. Thus a Gini index of 0 represents perfect equality, while an index of 100 implies perfect inequality.

4.93.101 GNI, Atlas method (current US dollar) (wdi_gniatlcur)

GNI (formerly GNP) is the sum of value added by all resident producers plus any product taxes (less subsidies) not included in the valuation of output plus net receipts of primary income (compensation of employees and property income) from abroad. Data are in current U.S. dollars. GNI, calculated in national currency, is usually converted to U.S. dollars at official exchange rates for comparisons across economies, although an alternative rate is used when the official exchange rate is judged to diverge by an exceptionally large margin from the rate actually applied in international transactions. To smooth fluctuations in prices and exchange rates, a special Atlas method of conversion is used by the World Bank. This applies a conversion factor that averages the exchange rate for a given year and the two preceding years, adjusted for differences in rates of inflation between the country, and through 2000, the G-5 countries (France, Germany, Japan, the United Kingdom, and the United States). From 2001, these countries include the Euro area, Japan, the United Kingdom, and the United States.

4.93.112 Intentional homicides (per 100,000 people) (wdi_homicides)

Intentional homicides are estimates of unlawful homicides purposely inflicted as a result of domestic disputes, interpersonal violence, violent conflicts over land resources, intergang violence over turf or control, and predatory violence and killing by armed groups. Intentional homicide does not include all intentional killing; the difference is usually in the organization of the killing. Individuals or small groups usually commit homicide, whereas killing in armed conflict is usually committed by fairly cohesive groups of up to several hundred members and is thus usually excluded.

4.93.115 Internally displaced persons, new displacement-disasters (number) (wdi_idpdis)

Internally displaced persons, new displacement associated with disasters (number of people). Internally displaced persons are defined according to the 1998 Guiding Principles (<http://www.internal-displacement.org/publications/1998/ocha-guiding-principles-on-internal-displacement>) as people or groups of people who have been forced or obliged to flee or to leave their homes or places of habitual residence, in particular as a result of armed conflict, or to avoid the effects of armed conflict, situations of generalized violence, violations of human rights, or natural or human-made disasters and who have not crossed an international border. “New Displacement” refers to the number of new cases or incidents of displacement recorded, rather than the number of people displaced. This is done because people may have been displaced more than once.

4.93.116 International migrant stock (% of population) (wdi_imig)

International migrant stock is the number of people born in a country other than that in which they live. It also includes refugees. The data used to estimate the international migrant stock at a particular time are obtained mainly from population censuses. The estimates are derived from the data on foreign-born population—people who have residence in one country but were born in another country. When data on the foreign-born population are not available, data on foreign population—that is, people who are citizens of a country other than the country in which they reside—are used as estimates. After the breakup of the Soviet Union in 1991 people living in one of the newly independent countries who were born in another were classified as international migrants. Estimates of migrant stock in the newly independent states from 1990 on are based on the 1989 census of the Soviet Union. For countries with information on the international migrant stock for at least two points in time, interpolation or extrapolation was used to estimate the international migrant stock on July 1 of the reference years. For countries with only one observation, estimates for the reference years were derived using rates of change in the migrant stock in the years preceding or following the single observation available. A model was used to estimate migrants for countries that had no data.

4.93.159 Mobile cellular subscriptions (per 100 people) (wdi_mobile)

Mobile cellular telephone subscriptions are subscriptions to a public mobile telephone service that provide access to the PSTN using cellular technology. The indicator includes (and is split into) the number of postpaid subscriptions, and the number of active prepaid accounts (i.e. that have been used during the last three months). The indicator applies to all mobile cellular subscriptions that offer voice communications. It excludes subscriptions via data cards or USB modems, subscriptions to public mobile data services, private trunked mobile radio, telepoint, radio paging and telemetry services.

4.93.184 Population density (people per sq. km of land area) (wdi_popden)

Population density is midyear population divided by land area in square kilometers. Population is based on the de facto definition of population, which counts all residents regardless of legal status or citizenship—except for refugees not permanently settled in the country of asylum, who are generally considered part of the population of their country of origin. Land area is a country's total area, excluding area under inland water bodies, national claims to continental shelf, and exclusive economic zones. In most cases the definition of inland water bodies includes major rivers and lakes.

4.93.191 Poverty gap at USD 1.90 a day (2011 PPP) (%) (wdi_povgap190)

Poverty gap at 1.90 dollars a day (2011 PPP) is the mean shortfall in income or consumption from the poverty line 1.90 dollars a day (counting the nonpoor as having zero shortfall), expressed as a percentage of the poverty line. This measure reflects the depth of poverty as well as its incidence. As a result of revisions in PPP exchange rates, poverty rates for individual countries cannot be compared with poverty rates reported in earlier editions. Note: five countries – Bangladesh, Cabo Verde, Cambodia, Jordan, and Lao PDR – use the 2005 PPP conversion factors and corresponding 1.25 dollars a day and 2 dollars a day poverty lines. This is due to the large deviations in the rate of change in PPP factors relative to the rate of change in domestic consumer price indexes. See Box 1.1 in the Global Monitoring Report 2015/2016 (<http://www.worldbank.org/en/publication/global-monitoring-report>) for a detailed explanation.

4.93.205 Services, value added (constant 2010 US dollar) (wdi_sva2010)

Services, value added (constant 2010 US dollar). Services correspond to ISIC divisions 50-99. They include value added in wholesale and retail trade (including hotels and restaurants), transport, and government, financial, professional, and personal services such as education, health care, and real estate services. Also included are imputed bank service charges, import duties, and any statistical discrepancies noted by national compilers as well as discrepancies arising from rescaling. Value added is the net output of a sector after adding up all outputs and subtracting intermediate inputs. It is calculated without making deductions for depreciation of fabricated assets or depletion and degradation of natural resources. The industrial origin of value added is determined by the International Standard Industrial Classification (ISIC), revision 3 or 4. Data are in constant 2010 U.S. dollars.

Global Competitiveness Report 2019

The Global Competitiveness Index 4.0 assesses the competitiveness landscape of 140 economies, measuring national competitiveness - defined as the set of institutions, policies and factors that determine the level of productivity. The Report presents information and data that were compiled and/or collected by the World Economic Forum organized into 12 pillars: Institutions, Infrastructure, ICT adoption, Macroeconomic Stability, Health, Skills, Product Market, Labor Market, Financial System, Market Size, Business Dynamism, and Innovation Capabilities.

4.94.1 Active labour market policies. 1-7 (best) (wef_alp)

Active labour policies. 1-7 (best). In your country, to what extent do Labour market policies help unemployed people to reskill and find new employment (including skills matching, retraining, etc.)? [1 = not at all; 7 = to a great extent] Original sources: World Economic Forum, Executive Opinion Survey

Min. Year: 2018 Max. Year: 2018
N: 36

N: N/A Min. Year: N/A Max. Year: N/A \bar{N} : N/A
 \bar{T} : N/A

4.94.2 Strength of auditing and reporting standards. 1-7 (best) (wef_audit)

Strength of auditing and reporting standards. 1-7 (best). In your country, how strong are financial auditing and reporting standards? [1 = extremely weak; 7 = extremely strong] Original sources: World Economic Forum, Executive Opinion Survey

Min. Year: 2018 Max. Year: 2018
N: 36

N: N/A Min. Year: N/A Max. Year: N/A \bar{N} : N/A
 \bar{T} : N/A

4.94.3 Burden of government regulation. 1-7 (best) (wef_bgr)

Burden of government regulation. 1-7 (best). In your country, how burdensome is it for companies to comply with public administration's requirements (e.g., permits, regulations, reporting)? [1 = extremely burdensome; 7 = not burdensome at all] Original sources: World Economic Forum, Executive Opinion Survey

Min. Year: 2018 Max. Year: 2018
N: 36

N: N/A Min. Year: N/A Max. Year: N/A \bar{N} : N/A
 \bar{T} : N/A

4.94.4 Credit gap. percentage points (wef_cg)

Credit gap. percentage points. Difference between the most recent domestic credit to private sector, as a percentage of GDP, and its 20-year trend. Original sources: The World Bank Group; World Economic Forum

Min. Year: 2018 Max. Year: 2018
N: 36

N: N/A Min. Year: N/A Max. Year: N/A \bar{N} : N/A
 \bar{T} : N/A

4.94.5 Innovation capability. 0-100 (best) (wef_ci)

Innovation capability. 0-100 (best). Original sources: World Economic Forum, Global Competitiveness Report 2018

Data from Freedom Rising by Christian Welzel

The World Values Survey measures of secular values and emancipative values are theoretically explained and empirically tested for their cross-cultural reliability and validity in *Freedom Rising*, pp. 57-105. The backward estimates of emancipative values for decades before available survey data are explained in *Freedom Rising*, pp. 157-161.

4.95.1 Citizen Rights (wel_citrig)

Meaning: Conditional index that measures the prevalence of citizen rights as the presence of respect of political participation rights on the condition of the presence of respect of personal autonomy rights, using multiplication to combine the two [CitRig = PAR * PPR].

Source: Welzel's (2013: 254-263) "citizen rights index", available annually for most countries in the world from 1981 to 2010.

Scaling: Index scores range from 0 for the complete absence of citizen rights in law and practice to 1 for their full presence in law and practice, with proper fractions for intermediate positions.

Links: Data sources, rescaling procedures and replication data are meticulously documented in the Online Appendix to Welzel's (2013) *Freedom Rising* at www.cambridge.com/welzel (p. 72). Test statistics documenting this index's superior validity in comparison to alternative democracy measures are reported in Welzel (2013: 267-271).

Note: the missing code (-99) has been recoded to missing (.).

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1981 Max. Year: 2010

N: 36 n: 967 \bar{N} : 32 \bar{T} : 27

4.95.2 Control of Corruption (wel_coc)

Meaning: Factor scale from the World Bank's "global governance indicators" measuring the degree of corruption control in a country.

Source: Alexander and Welzel (2011); Alexander, Inglehart and Welzel (2012). Categorization is available in annual measures for most countries of the world from 1996 to 2006.

Scaling: The factor scores are standardized into a range from minimum 0 (for the lowest ever observed corruption control) to maximum 1.0 (for the highest ever observed corruption control), with fractions for intermediate positions. Note: In the original data there exists two different observations for Dominica, the value has been recoded to missing for this country.

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1996 Max. Year: 2012
N: 35 n: 490 \bar{N} : 29 \bar{T} : 14

4.95.3 Democratic Rights (wel_dr)

Meaning: 14-point index measuring the prevalence of democratic rights based on Freedom House's "civil liberties" and "political rights" ratings.

Source: Alexander and Welzel (2011); Alexander, Inglehart and Welzel (2012). Categorization is available in annual measures for most countries of the world from 1996 to 2006.

Scaling: The two Freedom House scales are inverted, averaged and standardized into a range from minimum 0 (no democratic rights) to 100 (maximum democratic rights), with percentages of the maximum rights for intermediate positions. Note: In the original data there exists two different observations for Dominica, the value has been recoded to missing for this country.

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1996 Max. Year: 2012
N: 35 n: 490 \bar{N} : 29 \bar{T} : 14

4.95.4 Effective Democracy Index (wel_edi)

Meaning: Conditional multi-point index measuring the extent of effective democracy, understood as the presence of democratic rights on the condition that honest governance puts them into real practice [EDI = DemRig * HonGov].

Source: Alexander and Welzel (2011); Alexander, Inglehart and Welzel (2012). Categorization is available in annual measures for most countries of the world from 1996 to 2006.

Scaling: Scores are weighted percentages ranging from a theoretical minimum of 0 for the least effective or absent democracy to 100 for the most effective democracy. Note: In the original data there exists two different observations for Dominica, the value has been recoded to missing for this country.

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year:1996 Max. Year: 2012
N: 35 n: 490 \bar{N} : 29 \bar{T} : 14

4.95.5 Personal Autonomy Rights (wel_par)

Meaning: The indicator measures to what extent a country enacts personal autonomy rights by law and respects them in practice.

Source: Welzel's (2013: 254-263) "personal autonomy rights index" based on Freedom House's "civil liberties" as well as Cingranelli/Richards' "integrity rights". Freedom House civil liberties are inverted and then standardized into a range from minimum 0 to maximum 1.0. CIRI integrity rights are also

standardized into a range from minimum 0 to maximum 1.0. Then the average of the two is taken to measure personal autonomy rights. Measures exist on an annual basis from 1981 to 2010 for most countries in the world.

Scaling: Index scores range from 0 for the completely absent or disrespected personal autonomy rights to 1.0 for their full presence and respect, with proper fractions for intermediate positions.

Links: Data sources, rescaling procedures and replication data are meticulously documented in the Online Appendix to Welzel's (2013) Freedom Rising at www.cambridge.com/welzel (p. 72). Test statistics documenting this index's superior validity in comparison to alternative democracy measures are reported in Welzel (2013: 267-271).

Note: the missing code (-99) has been recoded to missing (.).

N: N/A Min. Year: N/A Max. Year: N/A

Min. Year: 1981 Max. Year: 2010

N: 36 n: 993 \bar{N} : 33 \bar{T} : 28

4.95.6 Political Participation Rights (wel_ppr)

Meaning: The indicator measures to what extent a country enacts political participation rights by law and respects them in practice.

Source: Welzel's (2013: 254-263) "political participation rights index" based on Freedom House's "political rights" as well as Cingranelli/Richards' "empowerment rights". Freedom House political rights are inverted and then standardized into a range from minimum 0 to maximum 1.0. CIRI empowerment rights are also standardized into a range from minimum 0 to maximum 1.0. Then the average of the two is taken to measure political participation rights. Measures exist on an annual basis from 1981 to 2010 for most countries in the world.

Scaling: Index scores range from 0 for completely absent or disrespected political participation rights to 1.0 for their full presence and respect, with proper fractions for intermediate positions.

Links: Data sources, rescaling procedures and replication data are meticulously documented in the Online Appendix to Welzel's (2013) Freedom Rising at www.cambridge.com/welzel (p. 72). Test statistics documenting this index's superior validity in comparison to alternative democracy measures are reported in Welzel (2013: 267-271).

Note: the missing code (-99) has been recoded to missing (.).

4.95.7 Regime Type (wel_regtype)

Meaning: Regime types measure the 4-fold combination of personal autonomy rights and political participation rights, resulting in four combinations.

Source: Welzel, Freedom Rising (2013: 257-258). Typology is available in annual measures for most countries of the world from 1981 to 2010.

Scaling: 1 "Pure Autocracy": both personal autonomy rights and political participation rights below the scale midpoint (0.50); 2 "Inclusive Autocracy": personal autonomy rights below the scale midpoint, political participation rights above the scale midpoint; 3 "Liberal Autocracy": personal autonomy rights above the scale midpoint, political participation rights below; 4 "Minimal Democracy": both personal autonomy rights and political participation rights above the scale midpoint.

Links: Data sources, rescaling procedures and replication data are meticulously documented in the Online Appendix to Welzel’s (2013) Freedom Rising at www.cambridge.com/welzel (p. 72). Test statistics documenting this index’s superior validity in comparison to alternative democracy measures are reported in Welzel (2013: 267-271).

Min. Year:1996 Max. Year: 2012
N: 35 n: 490 \bar{N} : 29 \bar{T} : 14

4.95.10 Scalezone on Citizen Rights (wel_scalezone)

Meaning: Categorical scale zones on the citizen rights index, distinguishing four categories from more completely to less completely autocratic, and then from less completely to more completely democratic.

Source: Welzel, Freedom Rising (2013: 255-256). Categorization is available in annual measures for most countries of the world from 1981 to 2010.

Scaling: 1 “Complete Autocracy”: citizen rights score less equal 0.25; 2 “Incomplete Autocracy”: citizen rights score above 0.25 and less equal 0.50; 3 “Incomplete Democracy”: citizen rights score

above 0.50 and less equal 0.75; 4 “Complete Democracy”: citizen rights score above 0.75.
 Links: Data sources, rescaling procedures and replication data are meticulously documented in the Online Appendix to Welzel’s (2013) Freedom Rising at www.cambridge.com/welzel (p. 72). Test statistics documenting this index’s superior validity in comparison to alternative democracy measures are reported in Welzel (2013: 267-271).

4.95.11 Political System Type (wel_sys)

Meaning: 4-fold system typology derived from cross-tabulating democratic rights and honest governance.

Source: Alexander and Welzel (2011); Alexander, Inglehart and Welzel (2012). Categorization is available in annual measures for most countries of the world from 1996 to 2006.

1. “Unbound Autocracy”: both democratic rights and honest governance below their scale mid-points
2. “Bounded Autocracy”: democratic rights below, honest governance above the scale midpoint
3. “Ineffective Democracy”: democratic rights above, honest governance below the scale midpoint
4. “Effective Democracy”: both democratic rights and honest governance above the scale midpoint.

Note: In the original data there exists two different observations for Dominica, the value has been recoded to missing for this country.

4.96 Nyrup and Bramwell

If you use any of these variables, make sure to cite the original source and QoG Data. Our suggested citation for this dataset is:

Nyrup, J., & Bramwell, S. (2020). Who governs? a new global dataset on members of cabinets. *American Political Science Review*, 114(4), 1366–1374

<https://politicscentre.nuffield.ox.ac.uk/whogov-dataset/>
(Data downloaded: 2021-10-08)

The WhoGov Dataset

The WhoGov dataset provides bibliographic information, such as gender and party affiliation, on cabinet members in July of every year in the period 1966-2016 in all countries with a population of more than 400,000 citizens. The dataset is highly flexible and can be used to calculate countless variables of interest, including the number of female ministers, ministerial experience, cabinet turnover and cabinet size at the country-year level. The data is based on cabinet compositions in July for all years apart from 1966, where data was only available for September and 1970, where they are using January instead of July. The original source also has disaggregated information at the individual cabinet member level (with more than 50,000 entries) that may be of interest for our users and it is available at <https://www.nuffield.ox.ac.uk/our-research/research-centres/nuffield-politics-research-centre/whogov/download-dataset/>.

4.96.1 Number of years the leader in office continuously (wgov_leadexp)

The number of years the person has been leader of the country in a row, continuous. Thus, it starts over if the leader is removed. The count starts at 1, when the leader first appear as leader in the dataset. Therefore, the measure is imprecise for leaders, who came to power before 1966.

4.96.5 Number of cabinet ministers with a military title (wgov_minmil)

The number of cabinet ministers with a military title. It should be noted that the authors have not done any extra checks on this variable, and solely have relied on the information provided in the "Chief of State And Cabinet Members Of Foreign Governments" directory. The information is based on national customs. Thus, in some countries military titles are consistently used, while this is not the case in other countries, and the authors therefore encourage researchers to be cautious when using this variable.

(Data downloaded: 2021-11-16)

Autocratic Regime Data: All Political Regimes

Data to identify and analyze autocracy-to-autocracy transitions. Version 1.2. When the leader of an autocratic regime loses power, one of three things happens. The incumbent leadership group is replaced by democratically elected leaders. Someone from the incumbent leadership group replaces him, and the regime persists. Or the incumbent leadership group loses control to a different group that replaces it with a new autocracy. Much scholarship exists on the first kind of transition, but little on transitions from one autocracy to another, though they make up about half of all regime changes.

4.99.1 Non-Autocracy (wr_nonautocracy)

Variable on what substituted the autocracy. Classes are:

1. Democracy
2. Foreign-Occupied
3. Not-Independent
4. Provisional
5. Warlord
6. Warlord/Foreign-occupied

World Values Survey dataset and European Values Studies dataset

The World Values Survey is a global network of social scientists studying changing values and their impact on social and political life, led by an international team of scholars, with the WVS association and secretariat headquartered in Stockholm, Sweden. The European Values Study started in 1981 when a thousand citizens in the European Member States of that time were interviewed using standardized questionnaires. Every nine years, the survey is repeated in a variable number of countries. The fourth wave in 2008 covers no less than 47 European countries/regions, from Iceland to Georgia and from Portugal to Norway. EVS is cooperating with WVS for the data collection in Europe and both datasets can be integrated.

The variables are country averages calculated using the population weight provided by WVS/EVS.

4.100.1 Confidence: Churches (wvs_confch)

I am going to name a number of organizations. For each one, could you tell me how much confidence you have in them: Churches
