ESS 5 - European Social Survey 2010, Sweden(ESS5)

ESS 5 - Den europeiska socialundersökningen 2010, Sverige

Overview

Type	European Social Survey
Identification	SND0924-001
Version	Production Date2014-10-03 1.0
Series	The European Social Survey (ESS) is an academically driven cross-national survey that has been conducted every two years across Europe since 2001. The survey measures the attitudes, beliefs and behaviour patterns of diverse populations in more than thirty nations. The questionnaire includes two main sections, a core module which remains relatively constant from round to round, plus two or more 'rotating' modules, repeated at intervals. The core module aims to monitor change and continuity in a wide range of social variables, including media use, social and public trust; political interest and participation; socio-political orientations, governance and efficacy; moral, political and social values; social exclusion, national, ethnic and religious allegiances; well-being, health and security; demographics and socio-economics. In addition, a supplementary questionnaire is presented to respondents at the end of the main interview. The first part of this questionnaire is a human values scale (part of the core), while the second is devoted to measures to help evaluate the reliability and validity of items in the main questionnaire.

Abstract

This survey is the Swedish part of the 2010 'European Social Survey ' (ESS), and is focusing on family, work and well-being as well as justice. The survey also includes data on media and social trust, politics, subjective well-being, household characteristics and socio-demographics as well as human values as part of the core module of ESS.

Kind of Data	Survey data: Independent surveys
Unit of Analysis	Individual
